The first is, that their existence is a matter of the last ten years only. No one of the so-called parties (*to*—a word meaning rather "society," the German *Bund*), whatever the ante-natal influences that moulded it, has yet reached its tenth birthday. The second truth is, that the Government is, in fact, not conducted personally by the Emperor, but according to the combined will of a small number of men in official position—a number yearly growing larger, however, and daily more and more restricted in their action to the path marked out by public opinion. These fill the leading governmental posts, and their assumption or resignation of office is determined solely by the exigencies of preserving harmony among themselves and at the same time recognizing each other's relative influence. There can be no doubt, let me hasten to say, that a fair number are entitled to be called statesmen, that they use their power, on the whole, to the best of their knowledge and ability, and that the Government could not as yet be properly carried on by any other mechanism. Like the war-horses of the Republican party in the United States, they rose to their present influence in the revolutionary times of 1860–70, and until within recent years their compact ranks have, with a very few exceptions, held all of the most capable patriots in the nation.

The third follows easily from the second, and is this:—A political party in Japan is, and under hitherto existing conditions could only be, the personal following of a member of this circle who has chance to become one of the "outs." Given the politically apathetic *heimin* (commoners), the intelligent but inexperienced and unorganized *shizoku* (samurai), the wielding of power by an absolutely irresponsible Cabinet having a monopoly of the able men of the country, and the existence of a political party is impossible. Until, as a result of dissension, some leading member of that select circle should be obliged to leave it, should thus be placed in opposition, and should seek popular support, political controversy would be carried on only within the Government itself, not in the arena of popular discussion. This is precisely what has happened. When it has come to pass that one of the more influential members has been forced out of the circle (although a remarkable power of cohesion has made this a rare occurrence), he has become the nucleus of a party. Conversely, no political party has arisen except in this way.

There are a few apparent exceptions to this rule which are easily explained. When Eto Shimpei (of the Hizen clan), in 1873, and Mayebara (of the Choshu clan), in 1876, withdrew in anger, they resorted to arms instead of to peaceable agitation, and were executed as traitors. Kido, one of the greatest statesmen of the nation, retired in 1873, but soon after returned. Saigo met his end on the battlefield in armed opposition. Soyejima (of Hizen), who also went out with Itagaki in 1873, returned soon after as the Emperor's tutor, and still holds an office. Itagaki's large following (the creation of which in 1875–81 I have already described), was a party and something more. But when 1882 came, and other parties arose, this body, too, crystallized into a partisan organization, the *Fiyu-to* (Radicals). Goto, one of the earliest and most influential of the plotters for the Restoration, went out with Itagaki in 1873, and for many years preserved an unaccountable self-control; but some two years ago he, too (then a Count), appeared in the field with a party which finally adopted the name of *Daido Danketsu* (United party). The resignations of Iinoye, in 1887, and of Ito, in 1888, were not followed by the formation of parties; but the truth is that they never really went into the outer darkness. Their retirement was a piece of temporary policy. They are far too strong to bend before any other members of the oligarchy, and to day they represent a dominant, if externally invisible, Governmental influence.

Such are the general truths from which depends the existence of parties to-day in this country. So far as concerns the chronicles of their history, the tale may be made a short one. The period since 1881 divides itself into two parts. In that year the national ferment which resulted in the constitutional decree of October 12 furnished abundant material for the formation of parties. Upon Okuma's resignation, in 1881, he formed immediately the *Kaishin-to* (Progressist party), based on the principle of the immediate enfranchisement of the people. One might have expected a hody of men professing such a principle to join the standard of Itagaki's party, the *Fiyu* (Radicals). But the two sections have ever remained apart, and at one time even found themselves in bitter antagonism on the topic of treaty revision. The same period of ferment (1881–82) saw also the formation of the *Teisei-to* (Imperialists), the *Rik-kensei-to* (Constitutional Imperialists), and numberless minor organizations; but, with the Constitution solemnly promised for 1890, the excitement rapidly subsided, and by 1884 these parties had all disbanded except the *Kaishin-to*, and even from this its leader, Okuma, had nominally withdrawn. Itagaki's own explanation of the *Fiyu-to*'s dissolution, as a personal friend of his informs me, is that the restrictions of speech imposed by the Government made it impossible to conduct constitutionally such an agitation as he wished, and therefore, to rid the party of better heads who, for lack of lawful methods, inclined towards violent ones, he thought it best to disband the party, delaying the reunion of its best elements until the time should be ripe.

Thus ended the first period. From that time until within the last three years, there was almost no partisan activity. The question of treaty revision, however, bringing back Okuma (now Count) to office in 1887, galvanized the *Kaishin-to* once more into life. Count Goto, coming out of his retirement two years ago, took the stump, made a tour of the north-eastern provinces, and formed the *Daido Danketsu* (United party). This party rapidly grew, and to it were attracted so many from the old *Fiyu-to* that Goto, men said, began to reap where Itagaki had sowed the seed. The latter leader now bestirred himself once more. After a year or so of negotiation, the details of

which would be tedious, nearly all the fragments of his old party were in the *Aikoku-to* (Patriotic party). More than this has in effect happened, for an agreement has been reached according to which August next is to see the *Aikoku*, the *Daido*, and the *Fiyu* parties amalgamated, with much ceremony, into an organization to be called the *Ko-in* (United) Club.

But, other than these, are there any parties of note? If the generalization already made is correct, one may answer this by asking, Are there any men of influence who are now to be counted among the "outs" in active opposition? Of such there are notably two—General Viscount Torio and Viscount Tani. The former owns (one cannot help using the term) a little party called the *Hoshu-Chiusei-ha* (Conservative Independents). There is far less conservatism than independence, or let us say idiosyncrasy, in its make-up, and no one seems to pay it much respect. The latter's name has been associated with an organization of real importance, known as the *Kokusui Fuson-to* (Nationalist party). Its motive is a conservative and laudable desire to preserve the National individuality by refusing to adopt indiscriminately the ideas of the West, while keeping pace with its progress. "To adapt, not adopt," might be described as its motto. The real strength of this section, however, is not Viscount Tani, but the influence of leading members who are not partisan politicians, but represent the "Mugwumpism" of Japan.

One will naturally expect to hear something of the principles possessed by the three leading parties, the *Fiyu* (or *Aikoku*), *Daido*, and *Kaishin*. Here, however, there is a striking and somewhat amusing failure to disagree. One must resort to the platform of the Republican and Democratic parties from 1876 to 1880 to find a parallel. The *Kaishin-to* (but within a few months only) has issued a platform of sixteen articles, including reduction of land-tax, retrenchment in expenses, Cabinet by party, treaty revision, educational reform, extension of the franchise, greater freedom of speech, and other praiseworthy proposals. Not to be outdone, the *Fiyu-to* thereupon promulgated a creed of thirty-two articles, including, he it observed, all those of the *Kaishin-to*, with others of a somewhat more radical tendency, such as trial by jury, popular election of the governors of *ken* (counties), limitation of the number of nobles, etc. Within a month the *Daido* has published a platform of thirty articles; but of these, again, none strays far from those already in the field.

There are, however, certain distinctive marks to be seen, chiefly in the manner of men composing the parties. The *Fiyu-to* has from the first been preëminently the party, not of the proletariat, for there is as yet no such class here, but of the common people, of those on whom the taxes fall, of the poor man, of the democrats, of the radical political thinkers. The *Daido* party has to some extent poached on the same preserve; but it has drawn also from the men of the north-east (Aizu and the vicinity), the old partisans of the Shogunate, who have accepted with pleasure the opportunity to attack their old antagonists now in power, the men of the south-west. The *Kaishin* party represents the rich and the influential, but contains also a large number of the younger educated men not in official position. It is credited with moderate feelings, and at the same time with aristocratic proclivities. The *Kokusui-to* includes a number of the best thinkers and educators, of the younger generation principally, and represents the more thoughtful tendencies of the day. Perhaps it will in its present form never actively enter politics as an organization.

The interesting question, of course, is, What general tendency, explicitly recognized or not by one or another of these sections, is to furnish the principle which will divide parties under the approaching parliamentary régime? The measures which the various sections advocate show a striking similarity of aim; it remains to discover whether their existence points to any real issues.

As between any two of the *Daido*, *Fiyu*, and *Kaishin* parties, it seems hardly possible that any issue can be formed. All began as oppositionist parties, and the only pregnant distinction at present is that between the *personnel* of the *Kaishin* and that of the other two. The latter have now practically united, and it seems not improbable that by November the *Kaishin-to* also may have given up its separate existence. The *Kokusui* represents a principle which is of more consequence at present in art, manners, and education than in ordinary political matters, and perhaps not for a decade or so will an issue of broad importance and popular interest arise in which this principle will be at stake. Economic issues, too (I do not say economic problems), at present there are virtually none, if we omit the demand for taxation reform.

There is no rent question, no labour question, no tariff question. What, then, can be prophesied as to the parliamentary parties?

There is one motive which seems to have supplied the very vitality of the three great parties, and it is not unlikely that this will furnish the dominant note in the formation of parliamentary sections. This motive is a simple one—the desire, on the part of a large portion of the *shisoku*, to share in the Government, and not alone in the deliberative functions of the National Assembly, but in the more real power of the Ministry. This is to day the theme which quickest finds a popular response. When Count Goto made his tour of the north-east, he proclaimed himself in favor of government by party, and raised a strong following by attacking the principle of exclusiveness on which the present Cabinet is founded. When Count Okuma was recalled in 1887 to a place among his old comrades, and began to dictate a successful policy of treaty revision, the *Kaishin* ceased to be oppositionists, and loudly supported the Government policy of their leader, for they, too, shared in his success, and therein were tasting the power for which they had sighed. In short, the time seems to be coming when there must be, in part at least, a surrender resulting not merely in a popular Assembly invested with deliberate powers, but in a Ministry more or less responsible to that Assembly. It is this irresponsibility of the Ministry (or, to take the point of view of the "outs," this monopoly of power by a close corporation of the Restoration leaders and their friends), which seems to stick in the throats of the politicians. One cannot help feeling that this question must be solved by the nation in some way before it will be in a mood to take up any other great issue. The sooner it is solved the better. Until parliamentary government by party arrives (even if in a modified shape only), there cannot but be more or less indecision on current questions, more or less fluidity and lack of cohesion in the party materials. Until then there will be only one real party—the Opposition. The journals have already declared from time to time in favour of "*seito naikaku*" (a party Cabinet), mildly depreciating the present system of "*hanbatsu naikaku*" (a coalition Cabinet, holding power *ad libitum*).

Perhaps neither the first nor the second year of the National Assembly will see the issue precipitated. At present it is obscured by the cumbersome party platforms recently put forth. But I have endeavoured to give you some idea of the larger influences and their trend, rather than of the countless minor issues, which are but temporary and superficial.

THE COTTON-SPINNING INDUSTRY.

Continuing its report of the Osaka Conference, the *Hyogo News* of the 21st instant says:—

The Conference of Cotton Spinners in Osaka was continued on Wednesday, when the committee charged with the business brought up their report on the proposal to stop, if possible, the import of yarn. They recommended that the companies turn out a stated quantity of yarn monthly, reporting to the Union their monthly output, and the number of bales (1 bale to contain 40 *tama*) in stock. The figures of each company's output of the Union, but care to be taken that such reports do not obtain publicity outside the members for whose information they are intended. They further recommended that the scheme proposed by them should come into force as soon as possible. Their recommendations were adopted. In the afternoon a committee of five, consisting of Mr. Kawamura of Osaka, Mr. Yamanobe, of Osaka, Mr. Tamura, of the Kanekin Weaving Company, and Mr. Nakahashi, of Sen-shu, were chosen to report on the proposition brought forward by Mr. Yamanobe with reference to an increase in the duty on imported yarn, and the abolition of the export duty. The Conference duly considered and adopted the motion that the receipts of the Godown Companies should be accepted as securities by the banks against money loaned. The delegates of the Osaka and Kurashiki Spinning Companies and the Kanekin Weaving Company were chosen to superintend the export of yarn. The initial steps regarding the formation of a Cotton Yarn Exchange in Osaka were entrusted to a committee of five, viz., the representatives of the Osaka, Sen-shu, Settsu, and Hirano Spinning Companies and the Kanekin Weaving Company. This appears on Wednesday, but the Conference is not yet at the close of its labours.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 22nd.

The guarantee fund raised for Baring Brothers amounted to fifteen millions sterling. *The Times* says that the revival of Baring Brothers is probable, with the same partners but fresh capital.

London, November 23rd.

The firm of Baring Brothers will be continued as a limited liability company, with Mr. Thomas Baring as Chairman.

London, November 25th.

Serious floods have been the cause of severe damage to the workings of the Manchester ship canal.

(FROM THE "SINGAPORE FREE PRESS.")

London, November 4th.

Belgium has proposed for the Swiss a renewal of the Latin Union for a period of five years, but the latter desire to prolong the agreement only from year to year.

TIME TABLES AND STEAMERS.

TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6.05* 6.40, 8.35, 9.30*, 10.25, and 11.45 a.m., and 1.25, 2.30, 3.55, 4.45, 5.50, 6.50, 8.30, 9.55, and 11.15 p.m.

UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.20, 8.10, 9.15, 10.22, and 11.30 a.m., and 12.45, 2.30, 3.45, 5.30, 6.35, 7.50, 9.10, 10.05, and 11.05 p.m.

FARES—First-class, *sen* 60; second-class, *sen* 40; and third-class, *sen* 20.

Trains marked * run through without stopping at Omori, Kawasaki, Isurumi, and Kanagawa Stations. Those marked † run through without stopping at Omori, Kawasaki, and Tsurumi Stations.

TOKAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9.10, 10.20, 11.25 a.m., and 12.40, 3.25, 4.55, 5.35, and 7.45 p.m.; and Kozu (up) at 6.35, 8.40, 9.40, and 11.07 a.m., and 1.17, 2.45, 4.58, 7.25, and 9.46 p.m.

FARES—To Hodegaya, first-class *sen* 6, second-class *sen* 4, third-class *sen* 2; to Totanka, *sen* 18, *sen* 12, *sen* 6; to Ofuna *sen* 36, *sen* 24, *sen* 12; to Fujisawa, *sen* 42, *sen* 28, *sen* 14; to Hiratsuka, *sen* 66, *sen* 44, *sen* 22; to Oiso, *sen* 75, *sen* 50, *sen* 25; and to Kozu, *sen* 93, *sen* 62, *sen* 31.

Down trains at 6.50 a.m. run no further than Kyoto arriving there at 11.30 p.m.; at 10.20 a.m. no further than Nagoya, arriving at 10.10 p.m.; at 12.40 p.m. no further than Shizuoka, arriving there at 6.50 p.m.; and the train at 5.35 p.m. runs to Kobe, arriving at 12.45 p.m. next day.

A tramway runs between Kozu and Yuhoro (distance 4 *ri*). Jinrikisha may be hired between Yumoto and Miyakoshi (distance 4 *ri*).

OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.30 and 9.40 a.m., and 12.05, 1.30, 4.03, 6.14, and 8.30 p.m.; KAMAKURA (down) at 7.41 and 9.51 a.m., and 12.16, 1.41, 4.14, 6.25, and 8.41 p.m.; and ZUSHIMURA (down) at 7.50 and 10 a.m., and 12.25, 1.50, 4.23, 6.34, and 8.50 p.m.; YOKOSUKA (up) at 6.45, 8.55, and 11.20 a.m., and 12.50, 3.50, and 7.45 p.m.; ZUSHIMURA (up) at 7.01, 9.12, and 11.36 a.m., and 1.06, 3.16, 5.26, and 8.01 p.m.; and KAMAKURA (up) at 7.11, 9.22, and 11.46 a.m., and 1.15, 3.26, 5.36 and 8.10 p.m.

FARES—To Kamakura, first-class *sen* 9, second-class *sen* 6, third-class *sen* 3; to Zushimura *sen* 15, *sen* 10, *sen* 5; and to Yokosuka *sen* 30, *sen* 20, *sen* 10.

TOKYO-MARUHASHI RAILWAY.

TRAINS LEAVE TOKYO (Ueno) (down) at 6.40, 8.50, and 11.40 a.m., and 2.40 and 5.40 p.m.; and MARUHASHI (up) at 6.55, and 11.50 a.m., and 2.50 and 5.50 p.m.

SHINJIKU-HACHIOJI RAILWAY.

TRAINS LEAVE SHINJIKU, TOKYO, (down) at 6.55 and 9.55 a.m. and 12.52, 4, and 7 p.m.; and HACHIOJI (up) at 5.25, 8.25, and 11.25 a.m. and 2.20 and 5.30 p.m.

FARES—First-class *sen* 90; second-class *sen* 60; third-class *sen* 30.

NAGOYA-TAKETOYO RAILWAY.

TRAINS LEAVE NAGOYA at 9.05 a.m., and 5.05 p.m., and TAKETOYO at 7.50 a.m., and 3.50 p.m.

FARES—Second-class, *sen* 74; Third-class, *sen* 37

TAKETOYO-OFU RAILWAY.

TRAINS LEAVE TAKETOYO (up) at 5.40 and 10.40 a.m., and OFU (down) at 3.55 and 8.55 p.m.

FARES—Second-class, 26 *sen*, third-class, 13 *sen*.

KOZU-KOBE RAILWAY.

DOWN TRAINS LEAVE Kozu at 8.30 a.m., and 12.50, 2.13, 4.57, and 7.10 p.m.; GOTEMBA at 9.52 a.m., and 1.32, 3.35, 6.18, and 8.32 p.m.; NUMAZU at 5.20 and 10.40 a.m., and 2.30, 4.27, 7.09, and 9.24 p.m.; SHIZUOKA at 7.20 a.m., and 12.19, 4.12, 6.50, and 10.59 p.m.; HAMAMATSU at 6.10 and 10 a.m., and 2.40 and 6.45 p.m., and 1.16 a.m.; TOYOHASHI at 7.10 and 11.10 a.m., and 3.39 and 7.45 p.m., and 2.14 a.m.; OFU at 8.59 a.m., and 1.06, 5.22, and 9.28 p.m., and 4.02 a.m.; NAGOYA at 9.45, and 11.50 a.m., and 2. and 6.08 p.m., and 5 a.m.; Gifu at 10.53 a.m., and 1.3.06, and 7.09 p.m., and 6 a.m.; OGAKI at 11.24 a.m., and 1.28, 3.33, and 7.38 p.m., and 6.28 a.m.; MAIBARA at 9.45 a.m., and 1.2.49, 5.07, and 8.55 p.m., and 7.45 a.m.; HIKONE at 10.05 a.m., and 1.18, 3.02, 5.25, and 9.06 p.m., and 7.58 a.m.; BABA (Otsu) at 12.3.15, 4.40, 7.10, and 10.43 p.m., and 9.34 a.m.; KYOTO at 12.45, 4.05, 5.35, and 8 p.m., and 10.14 a.m.; and OSAKA at 2.25, 5.35, 7.20, and 9.50 p.m., and 11.42 a.m.

UP TRAINS LEAVE Kozu at 5.55 and 9.55 a.m., and 1.55, 3.45 and 5.30 p.m.; OSAKA at 7.06 and 11.06 a.m., and 3.06, 5. and 6.36 p.m.; KYOTO at 5.35 and 8.40 a.m., and 12.40, 4.36, 6.40, and 8.05 p.m.; BABA (Otsu) at 6.18, and 9.31 a.m., and 1.30, 5.25, 7.31, and 8.50 p.m.; HIKONE at 7.56, and 11.05 a.m., and 3.03, 7.02, 9.08, and 10.25 p.m.; MAIBARA at 8.13, and 11.20 a.m., and 3.19, 7.20, and 10.42 p.m.; OGAKI at 9.30 a.m., and 12.30, 4.37, 8.46, and 11.54 p.m.; Gifu at 9.57 a.m., and 10.02, 5.04, and 9.15 p.m., and 12.17 a.m.; NAGOYA at 6, and 11 a.m., and 2.10 and 6.20 p.m., and 1.09 a.m.; OFU at 6.43 and 11.44 a.m., and 2.56 and 7.04 p.m., and 1.41 a.m.; TOYOHASHI at 8.30 a.m., and 1.30, 4.42, and 8.52 p.m., and 3.17 a.m.; HAMAMATSU at 6.30 and 9.45 a.m., and 2.45 and 6 p.m., and 4.25 a.m.; SHIZUOKA at 5.15 and 9.07 a.m., and 12.45, 5.20, and 9.45 p.m., and 7.08 a.m.; NUMAZU at 7.03 and 10.46 a.m., and 2.24 and 7.14 p.m., and 8.43 a.m.; GOTEMBA at 8.15 and 11.58 a.m., and 3.38 and 8.28 p.m., and 9.53 a.m.; and Kozu at 9.40 a.m., and 1.17, 4.58, and 9.46 p.m., and 11.07 a.m.

FARES—Kozu to Gotemba: first-class, *sen* 66, second-class *sen* 44, third-class *sen* 22; to Numazu *sen* 1.11, *sen* 74, *sen* 37; to Shizuoka *sen* 2.13, *sen* 1.42, *sen* 71; to Hamamatsu *sen* 3.57, *sen* 2.38, *sen* 1.19; to Toyohashi *sen* 4.23, *sen* 2.82, *sen* 1.41; to Ofu *sen* 5.22, *sen* 3.48, *sen* 1.74; to Nagoya *sen* 5.58, *sen* 3.72, *sen* 1.86; to Gifu *sen* 6.15, *sen* 4.10, *sen* 2.05; to Ogaki *sen* 6.42, *sen* 4.28, *sen* 2.14; to Maibara *sen* 7.05, *sen* 4.70, *sen* 2.35; to Hikone *sen* 7.17, *sen* 4.78, *sen* 2.39; to Baba *sen* 8.10, *sen* 5.40, *sen* 2.70; to Kyoto *sen* 8.40, *sen* 5.60, *sen* 2.80; to Osaka *sen* 9.21, *sen* 6.14, *sen* 3.07; and to Kobe *sen* 9.81, *sen* 6.54, *sen* 3.27.

The down train at 8.32 a.m. runs no further than Kyoto, arriving there at 11.30 p.m.; at 12.12 p.m. no further than Nagoya, arriving at 10.10 p.m.; and the train at 5.30 p.m. runs to Kobe, arriving at 12.40 p.m. next day. The up train at 5.55 a.m. runs no further than Shizuoka, arriving there at 6.40 p.m.; at 9.55 a.m. and 1.55 p.m. no further than Nagoya, arriving respectively at 6.07 and 10.15 p.m.; and the train at 5.30 p.m. runs to Shimabashi arriving at 1.40 p.m. next day.

YOKOSUKA STEAMERS.

STEAMERS LEAVE the Nippon Hatoba daily at 8.30 a.m., and 12.30 and 3.30 p.m.; and LEAVE YOKOSUKA at 8.30 a.m., and 12.30 and 3.30 p.m.—Fare, *sen* 20.

REPORTS.

The Japanese steamer *Tokio Maru*, Captain Drummond, reports:—Left Hakodate the 19th November at 2 p.m.; rounded Shirai-saki at 6 p.m.; reached Kuro-saki the 20th at 2.12 a.m.; strong N.W. winds and heavy N.E. swell. Arrived at Oginohama at 1 p.m. and left the 21st at 6.30 a.m.; had light variable winds and heavy N.E. swell; passed Inuboye at 10.5 p.m.; reached Noshima the 22nd at 5.15 a.m.; thence to port fresh N. to N.W. winds and thick rain and dirty weather. Arrived at Yokohama at 10 a.m.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Kobe the 22nd November at noon; had fine weather and light northerly winds up to arrival at Yokohama the 23rd November at 7.30 p.m.

The Japanese steamer *Sagami Maru*, Captain Walter, reports:—Left Kobe the 22nd November at 6 p.m.; had light to fresh north-easterly winds and fine weather throughout the passage. Arrived at Yokohama the 24th November at 2 a.m.

The British steamer *Abyssinia*, Captain Lee, reports:—Left railway terminus Vancouver the 3rd November at 4.20 p.m.; called at Esquimalt and sailed from there at noon on the 5th; passed Kinkasan the 23rd at 10.15 a.m. Arrived at Yokohama the 24th November at noon. Between Vancouver and Esquimalt detained 37 hours owing to dense fogs, and from Vancouver Island to 180 meridian which occupied 10 days, experienced continuous hard westerly gales with very heavy head sea; thence to Kinkasan strong to fresh N.N.W. and S.W. winds prevailing, moderate sea and fine winter weather; Kinkasan to Yokohama fine weather. Time occupied during voyage 18 days. Brings a full general cargo for Shanghai.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Hakodate the 22nd November at 2 p.m.; had moderate westerly breeze and fine clear weather. Arrived at Oginohama the 23rd at noon and left the 24th at 5 a.m.; had light southerly winds, fine clear weather, and smooth sea till arrival at Yokohama the 25th November at 7.45 a.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Kobe the 24th November at noon; passed Oshima at 9 p.m. and Rock Island the 25th at 11.45 a.m.; had light variable winds, smooth sea, and fine clear weather throughout the voyage. Arrived at Yokohama at 6.10 p.m.

The Japanese steamer *Oni Maru*, Captain Wynn, reports:—Left Hakodate the 24th November at 2 p.m.; had fine weather and light winds to Kinkasan; thence strong N.W. winds and fine weather to port. Arrived at Yokohama the 26th November at 1.20 p.m.

The Japanese steamer *Tokio Maru*, Captain Drummond, reports:—Left Kobe the 26th November at noon; had fine weather and light breeze from southward; passed Tomaga-shima at 2.12 p.m.; Ooshima abeam at 8.40 p.m., weather still the same; reached Rock Island the 27th at 11.20 a.m.; thence to port strong S.W. winds. Arrived at Yokohama at 5.30 p.m.

LATEST COMMERCIAL.

IMPORTS.

Business is at a complete standstill, the Japanese having turned their attention to festivities and general rejoicing over the opening of the Imperial Diet; the past week may be registered as a blank in the annals of the Import business. Not a bale of English Yarns has been reported, and Bombays to the small extent of 35 bales only, and Shirtings 1,250 pieces.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing most agreeable method of administering the only certain remedy for INTESINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the druggoman Mahomet to inform the Fakir that I was a doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmitigated purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin disease, and in arresting and subduing all inflammations. Mr. J. T. Courten, published in 1877, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1891

NOW READY,

WITH COLOURED PLAN,

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

YOKOHAMA: SATURDAY, DEC. 6, 1890.

SUMMARY OF NEWS.

THE railway between Kusatsu and Yokkaichi will be opened shortly.

COUNT YAMAGATA arrived in the capital on the 1st inst. from Oiso.

THE railway between Osaka and Nara will be opened on or about the 10th inst.

HIS IMPERIAL HIGHNESS PRINCE ASAHIRO started from the capital on the 27th ult. for Kyoto.

FROM the beginning of this year to the present 150,000 tons of coal were raised at the Horonai coal mine.

THE resignation by Count Yanagiwara of his seat in the Upper House, was announced on the 20th ult.

TELEGRAMS from Nagaoka, Yamagata, and Niigata Prefectures report that snow fell there on the 29th ult.

COUNTESS YAMAGATA, who has been at Oiso for some time, will leave for Yamaguchi Prefecture in a few days.

THE association of Christian teachers in Tokyo presented a letter of congratulation to the Lower House on the 29th ult.

THE Government has received intelligence of the arrival at Aden of the *Hiyei Kan* and *Kongo Kan* on the 30th ult.

THE Diet has had several sessions, but its time has been chiefly occupied with preliminary operations of organization and so forth.

COUNT ITO, President of the Upper House, and Mr. Nakajima, President of the Lower House, had an audience of the Emperor on the 1st inst. at the Palace.

THE Osaka Shosen Kaisha has opened a new

route between Osaka and Jinsen, Korea, and the *Sumidagawa Maru* will be sent on the 2nd instant on its first trip.

HIS IMPERIAL HIGHNESS PRINCESS TSUNK, accompanied by her suite, proceeded to the Asakusa Park and paid a visit to the Ryouunkaku Tower on the 26th ult.

A TELEGRAM from Kumamoto Prefecture reports that thirty-four persons were attacked by cholera within 12 days from the 17th to the 28th November last in Kumamoto city.

MR. MORI SHUNKICHI, a civil engineer, who recently returned from Europe, has invented a method of manufacturing smokeless powder, after a long course of experiments.

THE number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 30th ult. was 44,657, resulting in 31,199 deaths.

THE Nagoya Rice Exchange gave 1 *sho* of rice to each of the poor to celebrate the opening of the Diet. One thousand three hundred and seventy-nine persons received the dole.

THE *Takachiho Kan* arrived at Shinagawa on the 29th ult. The *Musashi Kan*, training ship attached to the Yokosuka Admiralty Station, left Yokkaichi on the 1st inst. for Shimizu.

THE general meeting of the Nippon Tetsudo Kaisha (Japan Railway Company) will be held on the 19th inst. at the Kosei-Kan, Kyobashiku, Tokyo, commencing at one in the afternoon.

THEIR MAJESTIES THE EMPEROR AND EMPRESS were pleased to grant on the 2nd inst. the sum of yen 800 to the Kanagawa Prefectural Government for the relief of sufferers by the fire which took place on the 30th ult. in Yokosuka.

THE Japanese Consul at San Francisco reports that the total value of trade between Japan and that port during the month of August last was \$1,154,570, of which \$38,843 represented exports from Japan and \$1,116,727 imports.

MR. KIGAMI KIZAYEMON started for San Francisco on the 22nd ult. by the *China*, with the purpose of opening trade between San Francisco and Hawaii. He has the support of many of the leading merchants of Osaka and Yokohama.

To celebrate the opening of the Imperial Diet, the Hakubun-sha, Tokyo, liberated about 600 small birds on the 29th inst. A piece of paper was lightly attached to the legs of each, and those who find the paper will receive a book on presenting the same at the Hakubun-sha.

AN ordinary Cabinet meeting was held on the 2nd instant, at which there were present Counts Yamagata, Saigo, Yamada, Matsukata, Oyama and Goto, Viscounts Aoki and Kaba-yama, and Messrs. Yoshikawa and Mutsu. The proceedings commenced at ten in the forenoon.

THEIR IMPERIAL HIGHNESSES PRINCES AKIRA and Yoshihisa, Counts Yamagata and Saigo, Viscount Hijikata, Marquis Tokudaiji, Mr. Shirane, Vice-Minister of the Home Department, and all Governors of Prefectures who are now in the capital, had the honour of dining with the Emperor on the 27th ult. at the Palace.

ACCORDING to a report by the Sanitary Bureau, 1 new case of cholera occurred in Kyoto City on the 22nd ult., 2 new cases and 1 death in Hyogo Prefecture on the 24th ult.; 6 new cases in Chiba Prefecture from the 20th to the

26th ult.; 1 new case in Nara Prefecture on the 21st ult.; and 12 new cases and 15 deaths from the 15th to the 21st ult. in Kagawa Prefecture.

MESSRS. TSUYUKI JUNZABURO, Ishiwata Kayemon, Komatsu Shikichi, and Higuchi Chusuke of Atami, and Messrs. Okura Kihachi, Takashima Kayemon, Miranuma Shenzo, and Mogi Sobei of Tokyo and Yokohama received permission to lay a line between Atami and Odawara, on the 20th ult.

COLONEL OSHIMA, President of the Military Academy, who recently returned to Japan from Germany, delivered an address embodying his observations during his tour through Europe, at a meeting held on the 3rd inst., at which Prince Arisugawa, Commander-in-Chief of the Army, and a number of other officers were present.

A FEW days ago eleven flasks of quicksilver, the property of Takata & Co., were stolen from the Yokohama Custom House. One man was arrested by a detective named Takenouchi, and the property stolen was recovered. The thief is a native of Kagoshima Prefecture, and is believed to have had several accomplices.

A GENERAL meeting of the shareholders of the Nippon Yusen Kaisha was held on the 1st inst. in the office of the company. The receipts for the year were yen 5,962,324.41, of which yen 1,182,500 were set apart as a dividend for the year, to be declared at the rate of 11 per cent. per annum, yen 19,128,738 being carried forward to the next account.

PERMISSION has been granted by the Wakayama Local Government to Mr. Masuda, a diver of Yokohama, to raise the *Ertougrout* at his own expense. Mr. Masuda will start from here shortly. Mr. Omatsu Toyemon, a leading merchant of Kobe, received similar permission at the same time, and in all probability they will work in conjunction.

A SERIOUS fire broke out in the morning of the 30th ult. at Yokosuka, destroying 839 buildings, including the police station, the town hall, a bank, a school, and a temple. One man and two women were caught by the flames and burned to death, and eight persons were injured. The fire was subdued at 10 minutes past eight, having begun at half-past three in the morning.

IN most Imports business is at almost a standstill, as may be judged in the matter of Yarns, of which only twenty bales have been sold. The Metal trade is dull, prices are almost nominal, and deliveries are slow. There has been some enquiry for Kerosene, and 37,000 cases Russian have been taken, also a small parcel of Comet; and, as Tokyo market is said to be improving, holders are hoping that some reduction of the heavy stock may be near at hand. Sugar has met but small demand, but prices continue weak. There is no health in the Silk trade. When exchange moves in favour of holders a few transactions are put through, but these are largely compulsory on account of forward sales. The transactions of the week, however, are in no way proportionate to the stock, which still remains over 16,000 piculs. But little has been done in Waste Silk, though the assortment still remains good and stocks are ample. Buyers, however, are in the market, and are ready to go on when terms can be arranged. There is nothing worth reporting in the Tea trade. Exchange has continued to fluctuate, and the latest movement is a decline in rates.

EDITORIAL NOTES.

FAREWELL DINNER TO CAPTAIN BOUGOUÏN.

ON the evening of the 29th ultimo the Tokyo Club entertained Captain Bougoûin, Military attaché of the French Legation, at a farewell dinner. Covers were laid for over a hundred members, and representatives of nearly all the nationalities resident in Japan assembled to do honour to one of the most popular men ever known in this country. The Ministers of Russia, Germany, Austria, the United States, and Hawaii, Marquis Nabeshima, Viscount Matsudaira, Baron Nagaoka, and a number of other notables were among those present. The chair was occupied by Mr. H. W. Denison, one of the Vice-Presidents of the Club, and the Vice-Chairs by Messrs. E. Dun, T. B. Glover, and W. Heise. Great pains had been taken by the Manager, Mr. C. M. Duff, to have the tables decorated appropriately, and the result did credit to that gentleman's well known taste and skilful direction. Each *ménu* bore a photograph of Captain Bougoûin, some grave, some gay, and some of the caricature genus, and the *ménus* placed before the guest of the evening was in all respects a magnificent affair. It was in the form of an album. In the inside, round the *ménu* itself, were arranged miniature photographs of all the Club rooms, in which Captain Bougoûin has spent so many happy evenings and where he has contributed so materially to the pleasure of his fellow-members, as well as a photograph of the country seat of H.E. Count Saigo, formerly Minister of War, a place associated with many pleasant memories in the mind of the Count's close friend. On the outside Captain Bougoûin's arms and initials were beautifully emblazoned, and the whole was suspended from a frame of milk-white wood fashioned in the shape of a *torii*, the Japanese emblem of peace and good-will. Captain Bougoûin's health was proposed by Mr. Denison in the following terms:—

Your Excellencies and Gentlemen,—Again are we called upon to celebrate the departure from our midst of one of the fathers of this Club. But it is not alone as a Member of this Institution that we delight to do honour to Captain Bougoûin, nor is it alone as a Clubman that we shall miss him. Whether it be at our social gatherings, or at the whist-table, at billiards, or in that little room in which Fuku is the presiding genius and towards which our erring foot-steps perhaps too often turn, he is ever and the same genial companion; the same generous and gallant adversary. And although old Father Time, with gentle hand, is giving his locks a gentler shade, he is always "one of the boys." God bless him!

He has made our lives the happier by his coming; he will make them the sadder by his going.

To say that we shall miss him is but faintly to express the sense of loss we shall all feel when he is no longer with us. To say that we would rejoice if he could return to us, is but to express a sentiment I am sure we all entertain, and I need hardly assure Captain Bougoûin that we shall watch with great interest his advancement in the service of his country, for we have already made him "our colonel."

Your Excellencies and Gentlemen,—The health, happiness, and prosperity of our guest, Captain Bougoûin.

The toast having been drunk amid tumultuous applause, Captain Bougoûin, who was received with loud cheers, replied as follows:—

"I thank you very much indeed, my dear Denison, for your kind words. I wish I were able to answer you in your own tongue, but for some considerable time I have been dining and winning, and the long round of gaiety has interfered so much with my private lessons that I am now a worse speaker of English than I ever was. So please allow me to speak to my friends in French. We translate it:—"You spoil your Colonel too much, gentlemen, and truly I know not how to thank you for the charming proof of friendship that you offer me this evening. You all know with what regret I leave you, and leave this beautiful Japan, where I have passed fifteen happy years and where I have had the good fortune to win such kind friends. I derive, however, some little consolation from the old proverb, too trivial perhaps to be quoted here, which says that soldiers being always on the march, have a good chance of finding their friends again. If any of you come to Paris, I hope you will give me the great pleasure of asking for me at the Cercle Militaire, Place de l'Opéra, and ap-

pointing a place to meet. Be assured that you shall not have to wait long for an answer. But when we find ourselves together once more, do not, I pray you, forget that we are no longer at the Tokyo Club and greet me with one of those jocular cries which we laugh at here, but which might meet there with a different reception. Our agreeable *réunion* might end in the police station, and the promotion which you so kindly wish me, might be compromised. I treasure also some little hope of coming back to see you some fine day; if the opportunity presents itself, I shall not let it escape me. Keep my name, therefore, on the list of absent members, and let me say not "adieu" but "au revoir." I shall write to all my friends in Japan, whom I leave to-day with so much regret and whom I shall always be so charmed to meet again. My hearty thanks and best wishes to you all.—(Loud applause.)

THE MEIJI ART SOCIETY.

THE exhibition of oil paintings by the members of the Meiji Art Society, in the building formerly used by the Nobles' Club in Ueno Park, attracts considerable numbers of spectators, but we cannot pretend to be in any degree enthusiastic about the works displayed. Mr. Harada, who will be remembered by visitors to the Industrial Exhibition as the painter of the large picture of the Goddess Kannon descending on a dragon from the clouds, as well as of an excellent portrait of Prince Mori, has sent on this occasion two heads, evidently from life, which help to enhance his reputation. Undoubtedly he is an artist of great promise, remarkable alike for idealistic and technical faculties. But of the other pictures, with a few scarcely noteworthy exceptions, we are compelled to say that they are marked by a dead level of inferiority. Something is still wanting in the Japanese school of oil painters. Whether it is that the vast majority of them have never had, and cannot hope ever to have, an opportunity of visiting the great galleries of the West, and are consequently without any genuine sense of what is possible in the line of their art; or whether it is, as some assert, that the capacity of pictorial artists is numbed by want of patronage, and that they are unable to achieve anything really good in face of the indifference or economy which closes the market of their country against them, the undeniable fact is that their pictures are still only mediocre and barely mediocre. It had been hoped, and indeed expected, that the display made at this exhibition would quite eclipse that made at the Industrial Exhibition, and that good reasons would be furnished for bestowing marks of distinction which were withheld—unfairly withheld the artists assert—by the jurors on the latter occasion. But there can be no question, we think, that Japanese artists of the Western School did themselves far more justice at the Industrial Exhibition than they have now done themselves under the auspices of the Meiji Bijutsu-kai. Among the pictures shown at the *Hakuran-kai* there were some that suggested high expectations as to the future of oil painting in Japan, but among this new batch we find scarcely any that convey a similar impression. It is terribly uphill work for Japanese artists to contend against existing conditions. Their countrymen refuse, almost universally, to pay anything like a remunerative price for domestic efforts in oils or water colours, and there are in Japan exceedingly few Western pictures fit to be taken as good examples. The former difficulty is illustrated by the mournful paucity of red tickets in the present exhibition: scarcely one picture in every fifty has found a purchaser. The latter drawback may be appreciated by anyone who visits the *Sanko-shitsu*, or gallery of comparative specimens, which has been furnished with some trouble in an upper room of the exhibition building. The foreign paintings hung in this little gallery are much better, taken all round, than their Japanese competitors downstairs, but they are very poor affairs for all that, and any Japanese artist estimating the capacities of his *milieu* by such a display, could hardly find himself inspired or enthusiastic. It is plain enough, therefore, that the Japanese disciples of Occidental art have immense impediments to overcome, and that to pronounce any final verdict about their efforts

up to the present without making full allowance for the obstacles lying in their path, would be a very partial proceeding. We have, for our own part, the fullest confidence in the ultimate success of the school, and though its most recent works do not greatly strengthen our confidence, there remains the reflection that the disciples of the new style are now passing through perhaps the gloomiest stage of their career, where the novelty that lent attraction to their early efforts has worn off and no striking excellence has been developed to re-galvanise public interest. That it retains its vitality, and even develops new strength, under such circumstances, must be taken as a convincing proof of its final victory.

SPEECHES TO BE MADE BY MINISTERS OF STATE IN THE HOUSE OF REPRESENTATIVES.

THE Diet, says the *Hochi Shimbun*, has been organized, and after finishing the election of Committees and officers, the House of Representatives will be opened on the 6th instant to deliberate on the Poor Law Bill, the first measure submitted by the Government to the House. We are told that on that day the Ministers of State will attend the meeting, and before commencing the debate, Count Yamagata, the Minister President, will explain the administration of the present Government, and Count Matsugata, Minister of Finance, will give some explanations with reference to the estimates for the 24th year of Meiji. This is owing partly to a request made by the Chief Secretary of the House, but the Ministers originally entertained the intention of attending in the House and making personal explanations. There were however, some opinions opposed to such a step, on the ground that it would be disadvantageous to make long speeches at the outset or to offer official explanations. The Ministers were more or less influenced by these views, but they finally decided to make brief explanatory speeches. At any rate the constitutional system of government will henceforth become a thing of reality, and the people will be able to learn the motives and methods of the course of administration pursued by the Government.

DISGRACEFUL CONDUCT OF TOKYO STUDENTS.

AN unfortunate occurrence marred the good order of the proceedings in the streets of Tokyo on Saturday. Steps had been taken by the police to stem the streams of traffic flowing towards the main routes along which the Imperial cortège should pass, the result being that large crowds, collecting in the streets thus closed, watched the procession from whatever points of vantage were accessible. This was the case notably in the streets leading from the Nagata and Kojimachi districts to the route between the Sakurada and Tora Gates. When, however, the Imperial cortège had entered the enclosure of the Diet, these crowds were suffered to pass, and it immediately became an object with them to hasten forward so as to witness the exit of the cortège from the Diet. In this effort the Kojimachi crowd, hurrying southwards, impinged upon the Nagatacho crowd, pushing eastwards, and a struggle of some violence ensued at the entrance of the street by which both sought access to the precincts of the Diet. A corner of the Russian Legation enclosure abuts upon the road just at this point, and within the corner is a pavilion, raised some twelve or fourteen feet above the road. Several ladies and one or two children had seated themselves in the pavilion, thus commanding a full view of the Imperial cortège in its passage along the two streets which meet at this corner. When the collision between the two crowds occurred, the police, exerting themselves with remarkable forbearance and judgment, had almost succeeded in restoring order. But at that moment a band of students, coming from the direction of the Sakurada Gate, pushed violently forward, flourishing a towel tied to a stick, and uttering excited cries. It is impossible to say precisely what happened in the *melee* that followed. Certain it is, however, that first one stone, and then a shower of these missiles reached the pavilion in which the ladies were seated, fortunately injuring no one, but none the less capable of inflicting injury. The police are disposed to think that the stones

may have been aimed at themselves, not at the inmates of the pavilion, but we find it impossible to credit such a theory, in view of the height of the pavilion above the road. There still survives among Japanese, especially among hot-headed youths, a notion that to look down from a window or any other artificial height upon the Sovereign as he passes, is an act of rudeness, and we have no doubt that these unruly students sought, by a volley of stones, to signify their resentment against a violation of Japanese ideas of propriety by the occupants of the pavilion. Probably the young roughs would have been satisfied with this exhibition of uncivilized methods. But it happened that some servants of the Legation had established themselves on the roof of a stable, also overlooking the street. These men, observing the stone throwing, immediately began to strip tiles from the roof and aim them at the students, who retaliated with energy. In a moment the disturbance assumed serious dimensions. The students attempted to rush the back gate of the Legation, but before they could effect an entry the police gained the upper hand and made several arrests. As to the injuries inflicted, we are unable to speak with certainty. A groom of the Russian Legation had his face gashed by a stone, and the vernacular press reports that several people in the street were wounded by tiles. The fracas between the students and the servants is, however, a secondary affair. Whatever may have been its nature or origin, it must be separated from the first act of the students in throwing stones at the ladies in the pavilion. Such an outrage is wholly intolerable. It betrays ignorance of the fundamental instinct of civilization that women and children should be at all times and under all circumstances secure against violence at the hands of men. Nothing could be more disgraceful to Japan. We presume that these youths were of the *soshi* class: the vernacular newspapers assert that they were. But the term *soshi* has come to be a convenient appellation for every semi-savage rough who imagines that he has a mission to set all things right by recourse to the methods of barbarians. If Japan is to retain anything of the reputation that her courtesy and kindness have won for her, these public pests must be dealt with sternly and effectively. Should this last incident rouse the respectable citizens of Tokyo to a sense of the nuisance they are suffering to develop in their midst, we shall be disposed to welcome its occurrence. But unfortunately the reports contained in the Japanese newspapers are eminently calculated to obscure the truth, and to suggest that the blame primarily rests with the objects of the outrage. The tact and moderation invariably shown by Russia's Representatives in this country enable us to be sure that the act of a few youthful roughs will not be suffered to disturb the *entente* existing between the Russian Legation and the Japanese Foreign Office. But this very consideration renders it more intolerable that the wife of the Russian Minister and her guests should have been subjected to such an insult, and that the facts should be misrepresented by any newspaper, however insignificant.

RUDE CONDUCT OF JAPANESE STUDENTS TO FOREIGN LADIES.

It has been brought to our notice that as an American lady was driving across Atarashi-bashi in Tokyo a few days ago, she encountered a party of Japanese students carrying flags which they flourished in her face, accompanying the gesture with shouts. This may have been purely an ebullition of youthful spirits, but as it is by no means the first time during recent years that foreign ladies have been subjected to annoyance in the streets of the capital, we desire to call attention to the occurrence. Japanese youths never dream of committing any act of discourtesy towards their own ladies, unless indeed some conspicuous imitation of foreign fashions or foreign costume by the latter attracts the attention of passers by. But in instances now sufficiently numerous to be noticeable, low-class students seem to regard Western ladies as fair game for rude horse-play. Hap-

pily such violations of chivalry and courtesy are exceptional. During nineteen years' residence in the capital, not one has come under our own personal notice. But the time to protest against reprehensible practices is while they are still few and far between. If Japanese lads come to imagine that they are asserting themselves or giving evidence of an independent spirit when they behave rudely to foreign ladies in the streets, they will be labouring under a singular delusion; a delusion only to be accounted for on the hypothesis that their moral sense is gravely defective. In all civilized societies a woman ought to be assured against insult or roughness of any kind. Her weakness protects her in the eyes of chivalrous and educated persons. We do not insist that this rule is universally observed in the West. Low persons of the type recently referred to in these columns, do occasionally annoy and insult women by attentions and solicitations of an offensive character. But the principle is theoretically sacred in every moderately civilized community. The impulse of students or school-boys in America and Europe is not to insult women but to guard them against insult, and those concerned in the education of Japanese youths will do well to inculcate this wholesome feeling in respect of foreign women as well as of Japanese. If the lads who misbehaved themselves in the cases recorded during the past three years should deliberately set about devising some method of bringing their country into disrepute, they could not possibly hit upon a more effective plan than that of treating Western women rudely. It is to be sincerely wished that some of the leading vernacular journals would take up this subject, and use their influence to teach the thoughtless youths of the capital how much they disgrace themselves and their country by such practices.

LORD WOLSELEY AND CHINA.

LORD WOLSELEY also is among the prophets. In the *Review of Reviews* he writes:—

"The Chinese are the coming nation. The Chinese will, I think, overrun the world. The battle of Armageddon will take place between the Chinese and the English-speaking races. There will be, I assume, another war between France and Germany, and it will be about the bloodiest war or series of wars which we have seen in Europe. But, some day, a great general will arise in China, and the Chinese, who have been motionless for three centuries, will begin to progress. They will take to the profession of arms, and then they will hurl themselves upon the Russian Empire. Before the Chinese armies—as they possess every military virtue, are stolidly indifferent to death, and capable of inexhaustible endurance—the Russians will go down. Then the Chinese armies will march westward. They will overrun India, sweeping us into the sea. Asia will belong to them, and then, at last, English, Americans, Australians, will have to rally for a last desperate conflict. So certain do I regard this that I think one fixed point of our policy should be to strain every nerve and make every sacrifice to keep on good terms with China. China is the coming Power."

Naturally his Lordship's very positive words have excited quiet folks in the West. The *Poll Mall Budget* emphasises his prediction by printing it under a half-page drawing of a Chinaman resting his chin on the globe and stretching long-taloned hands over its fairest portions. The face of the Celestial lends itself easily to such caricature as is needed for the purposes of this sketch. A very trifling effort of the draughtsman's art converts the thin-lipped, narrow-eyed, prognathous, and leather-skinned Mongolian visage into a grasping, merciless countenance such as child would shrink from and a strong man dread. But does the future really contain contingencies like those indicated by Lord Wolseley? We do not believe it for a moment. The history of the world offers no example of a nation rising from the ashes of its past glory. Nothing can arrest national descent. Once commenced, it continues as steadily and surely as the movement of the glacier, though sometimes, perhaps, as slowly. Centuries ago the Chinese empire might have supported comparison with that of ancient Rome in extent and magnificence. To-day it has shrunk to relatively small dimensions, and bows its head under the rule of a foreign dynasty. A few years back it was stripped of Tongking as it had been previously stripped of Hongkong, and since then its suzerain claims in Burmah

have disappeared as they will doubtless do in Thibet ere long. Where are the evidences of its future omnipotence? Never, perhaps, was there a better illustration of the old adage *omne ignotum pro magnifico*. China's huge size, her teeming millions, the impressive solemnity of her stubborn conservatism, and the money-getting genius of her subjects, who, like the Irish, succeed better anywhere than at home, all these things combine to strike the superficial observer. But no one suggests that her stupendous career is to commence until she sloughs off her skin of prejudice and consents to take into her hands the same weapons that have made Western nations great. Surely it is over-sanguine to conclude that she will wield those weapons better than their forgers wield them, or that qualities which have lain dormant for centuries, if indeed she ever possessed them, can be revived so effectively as to render her invincible. Lord Wolseley's prophesy seems to us an utter chimera. Rather do we hold with Mr. Fukuzawa that despite the rejuvenating influence of railways and telegraphs, despite her spasmodic schemes of national equipment, and despite the strong blood infused into some branches of her administration by the assistance of able Europeans and Americans, China, continuing to fulfil her downward destiny, will one day yield into other hands the control of the millions whom she so ill knows how to protect against the ravages of flood, famine, and pestilence.

A SOCIETY OF LACQUER MANUFACTURERS.

A PROJECT is on foot, we read in the *Kokkai*, to found a society of lacquer manufacturers. The originator of the scheme is the celebrated artist artisan Mr. Shibata Zeshin, and with him are twenty-three others. There will be honorary members, associates, and ordinary members, and the programme of the Society is given as follows:—To hold one competitive exhibition every year. To publish a magazine for advertising purposes and to promote the interests of the Society. To take all possible measures for improving the art and developing it. To collect books needed by workers in lacquer. To open communications with brother artisans in the various localities. To form a museum for displaying the productions of the members. To organise lectures on subjects that concern lacquer manufacturers. To take steps for viewing and exhibiting works of art so as supply motives to, and increase the knowledge of, workers in lacquer.

GAMBLING IN JAPAN.

THE *Kokumin-no-Tomo* is very much exercised about the spread of gambling among the middle and upper classes. *Hana-garuta*, the national playing cards of Japan, are now, says our contemporary, so much in demand that manufacturers and dealers are scarcely able to comply with orders. The growing prevalence of this vice is attributed by the Tokyo journal to the effect of the general disorganization of society at and about the time of the Restoration. Men who subsequently came to occupy leading positions in the Government had been educated in the immoral school of those unquiet times. Their robes of state, their decorations, their carriages, and fine residences are very imposing, but in times of relaxation and in unguarded moments, unable to conceal their original character, they yield to their unconquerable passion for the pastimes of their youth. There are two sets of men—continues the *Kokumin*—who flatter and encourage the gambling propensity of those high in office; namely, the so-called *shin-sho* (gentlemen merchants) who by their close connections with influential statesmen have enriched themselves out of the national taxes, and young men of education and refinement who do not understand what is meant by unobtrusive virtue and moderation, and who are servile disciples of their official superiors in the vice of gambling. The Tokyo journal contrasts the laxity of principle about gambling among the better classes with the intense and universal disgust entertained towards gambling and gamblers by the lower orders of people. Even Kunisada Chuji, a famous gambler of

former times, is popularly spoken of with disapproval. The characteristic national dislike of gambling finds its expression in the Criminal Code, which makes gamblers liable to major imprisonment of from one to six months, and a fine of not less than 5 yen and not more than 50 yen. Further, at one time the police authorities were even empowered to deal with gamblers at their own discretion. The *Kokumin* finds it inconceivable that uneducated people should be punished for doing that which is openly, and with perfect impunity, indulged in by their betters. The Tokyo journal calls upon the Government and the leaders of the nation to check the growth of a vice which threatens to demoralize society and dissipate the energies of the best portion of the people.

The *Keizai Zasshi* also notices the increasing prevalence of the same vice among the upper classes, and urges the Chief of the Metropolitan Police to take some decisive steps for its suppression.

THE NEW CHINESE MINISTER.

THE *Fiji Shimpō's* correspondent writes from Tientsin that "Mr. Li Ching-fang, who has been appointed Chinese Minister in Japan, is the third son of H.E. Li Hwan-sho, Viceroy of Canton, and an adopted son of H.E. Li Chung-tang. Having obtained audience of the Emperor in Peking soon after his appointment, he ought, according to the correspondent, to have reached Tientsin by the date of writing (October 29th), but it is said that he stays at Peking for the purpose of making a congratulatory call at the Japanese Legation on the birthday of the Emperor of Japan. His suite, accompanying him to Japan, are said to number about 20 persons. As he devoted himself to the study of the Japanese language when he visited Japan some time ago, under private instructions from Viceroy Li, he is now able to carry on conversation in that language.

The *Mainichi* has the following on the same subject:—"We are told by a person who recently returned from China that Mr. Li, who will come over before long as the Chinese Representative at the Court of Japan, was engaged up to the beginning of last month in connection with the raising of a foreign loan for the Manchurian Railway. Having passed a long time in England as Secretary of the Chinese Legation, he speaks English well, and is fully acquainted with the social conditions of the West. He is also a strong advocate of Western customs, but on the other hand he is reported to be no great master of his own national literature, even in the matter of correspondence in prose or verse such as usually carried on among Chinese literateurs. Hitherto Chinese Ministers in this country have constantly devoted their spare hours to associating with our scholars and literateurs, and to exchanging with them essays in prose or poetry, but the new Chinese minister, unlike his predecessors, will most probably be an upholder of Western social entertainments, as balls, charity bazaars, concerts, and so forth. It is doubtful whether he will take much interest in the literary réunions hitherto so much liked by Chinese Ministers. What amount of credit he enjoys among his countrymen it is difficult to tell. As the adopted son of Li Chung-tang, he is of course looked up to in certain circles, and he seems also to be very popular among foreign merchants in China, who generally designate him Lord Li."

THE "CHOYA SHIMBUN."

It is stated by the *Fiji Shimpō*, doubtless on good authority, that arrangements have been made for the sale of the *Choya Shimbun* to gentlemen who intend to conduct it in the interests of the Independents (*Taisei-kai*). The price paid for the paper is put at twenty or twenty-five thousand yen, and the purchaser is either Mr. Arai Mamichi or Mr. Takagi Kiichiro. The title of the paper will not be changed, but its policy will be altogether modified so as to convert it into an organ of the *Taisei-kai*. It

will be owned by a company with a capital of fifty thousand yen in a hundred shares of 500 yen each, a portion of which will be taken up by members of the House of Peers, who are Imperial nominees from among the highest tax-payers, and by members of the *Taisei-kai*, the remainder being offered to the general public. The principal editors will be Messrs. Watanabe Osamu, Kawamura Jun, Kitagawa Reishitsu, and Nishi Shii. It will be remembered that the editorship in chief fell, not long ago, into the hands of Mr. Ozaki Yukyo, a writer of great note, who, with the assistance of Messrs. Yoshida and Inugai, has conducted the paper ably in the interests of the *Kaishin-to*. These gentlemen will now cease to have any connection with it. We learn from the same authority that whereas newspaper editors in Japan have hitherto been, for the most part, men possessing an English education, the new *Choya* will be conducted by writers having a knowledge of French and German, and its directors will endeavour to secure the aid of graduates of the Imperial University. The place of publication has not yet been determined, and depends apparently on conditions which may take some little time to arrange.

In connection with the above the following notice appears in its issue of the 28th ult.:

For no reasons other than those connected with journalism, I have acquired complete possession of the *Choya Shimbun*, and now, from the 29th day of November, the opening day of the Imperial Diet, I publicly declare the fact and enter upon the responsibilities of newspaper enterprise. Many changes will still be effected in the organization of the editorial department, but as this work could only be commenced on the 26th instant, there has not yet been time to complete it, and several days will still be needed. Meanwhile, I crave the indulgence of the journal's readers.

(Signed) WATANABE OSAMU.

For certain reasons we, the undersigned, have this day ceased to be connected with the *Choya Shimbun*:

THE ASIATIC SOCIETY OF JAPAN.

THE periodical publications of the Asiatic Society of Japan continue to make valuable additions to our knowledge of the country, and to furnish a library of reference of the highest importance to students of the people, their institutions, and their customs. The last volume, dated October, 1890, contains three papers of exceptional interest, Mr. E. M. Satow's "Origin of Spanish and Portuguese Rivalry in Japan," Mr. E. H. Parker's "Race Struggles in Korea," and Mr. R. Masujima's "Modern Japanese Legal Institutions." Mr. Satow, with the accurate and painstaking research and scholarship for which he has always been remarkable, traces the story of the ill-feeling that had existed for many years between Spain and Portugal, before Japan became a new arena for its display. This chapter of history has deep interest for students of Japan's foreign intercourse, because there can now be no manner of doubt that her seclusion, during nearly three centuries, had its origin in the quarrels between the Franciscans and the Jesuits, and in the intrigues incident to the rivalry between Spain and Portugal.

Mr. Parker's paper shows extensive reading and contains an apparently accurate record of the outlines of Korean history in early times. But it is difficult to construct any general conclusions from the mass of disjointed annals presented in this essay.

Turning to Mr. Masujima's contribution, we are at once struck by the pessimistic tone that pervades it. Mr. Masujima is one of the very few Japanese who take a thoroughly unfavourable view of the great changes

which their country has undergone during the past quarter of a century. In his eyes the overthrow of feudalism was simply an accident. He believes that the men who combined to drive the Tokugawa Regency out of power, really aimed at nothing better than replacing its military supremacy by that of some other clan, but that, no clan being found sufficiently powerful, all were obliged to combine for the restoration of the Imperial authority. He believes, also, that these men took up Western civilization without due thought; that they were dazzled by its magnificence, and that relying on their own estimate of their ability, they thought they could bring their country to the standard of the Occident. In a word, Mr. Masujima's version of Japan's modern history is the most hopeless and depreciatory ever yet penned. Here is his summary:—

The history of Japan for the last twenty years has consisted of first the destruction of the old, next the wholesale adoption of foreign institutions, and lastly reactionary attempts to undo the work done. The revolutionists imagined that they could buy and import civilization and foreign institutions like any other commodity, and make use of them with the same ease and benefit as do the nations where they are indigenous. Education, the army, the navy, the judicial system—everything was brought bodily from across the seas. True it is that some of these institutions fulfilled the expectations of their patrons; but anything imported by a forced process has serious drawbacks. The total result has not been satisfactory, and we are now beginning to suffer from it. Over-education, over legislation, and over-taxation are the products of wholesale indiscriminate importation. The so-called statesmen of whom we write thought everything foreign was good and would materially aid progress. They had read of foreign countries and institutions, without being able to realize what they were. Education and legislation were thought the best means of fulfilling their eager desire to civilize Japan, and the more generously these two agencies were employed the better. Great expense was a necessary consequence, and more taxation naturally followed. Theorists by thousands, innumerable laws, and excessive taxation were the fruits of the policy adopted at that time. These conditions are furnishing perplexing problems for our thinkers and statesmen. The difficulty is how to select and keep the good and reject the bad or unsuitable. If this matter is not approached with great foresight and judgment, Japan will have in the near future a socialistic class of people, consisting of dreamy, inexperienced youths, who are educated, it is true, but in a way that is of no practical good to themselves and most pernicious to the peace of the State.

These believers in the magic power of great men in office destroyed the whole ancient organization of the Government, along with other departments of social activity. They tried to replace this with what exists to-day in the West, forgetting that there it is the outcome of the life and labours, the thoughts and feeling of many generations.

It is regrettable that such words should be written by a Japanese, and regrettable that they should appear in the Transactions of the Asiatic Society, which now for the first time has opened its pages to political discussion. We admire Mr. Masujima's ability and courage, but we doubt whether he has yet proved himself competent to pronounce wholesale judgment on the statesmen who directed the Restoration and have made Japan what she is to-day. Nor is our idea of his competence strengthened by his analysis of Japanese legal institutions and their manner of working. His historical details, indeed, are of much interest, and his essay possesses undoubted value as an explanation of the legal system now existing in Japan. But the deductions drawn by him are startling and often inconsistent. In one breath he tells us, for example, that "it will require years, perhaps generations, of development before Japanese jurisprudence can meet the needs created by the changes of the past twenty years." In the next, speaking of the present judiciary, he asks:—"Is this old school of judges unsuited to the administration of justice at the present day, as has been sometimes asserted? Far from it. For age, experience, and acquaintance with Japanese human nature they have no equals. * * * Our *Cour de Cassation*, at least, with all its faults and shortcomings, is a judicature worthy of the highest respect. The Yokohama Court, of which Judge Okamura, of the Middle Temple, is the President, is a model to which all courts might well look. It gives us some idea of what a Japanese court may be made with proper management, though it has only been in exist-

ence twenty years." As plain-minded people we are unable to understand how, on the one hand, years, perhaps generations, must pass before Japanese jurisprudence can be competent to meet the needs of the time, while, on the other, the country already possesses a school of judges well suited to administer justice at the present day. Moreover, without any desire to be impolite to Mr. Masujima, we would ask how it happens that he, a Japanese, is so exceptionally qualified to pronounce sweeping verdicts about the unwisdom of his country's statesmen and legislators, the utter unsuitability of the legal system which they are introducing, and the competence of the Japanese judiciary from a Western standpoint. We know Mr. Masujima to be the last person who would claim any monopoly of ability to sit in judgment where such great questions are before the court, but his essay conveys very strongly the impression that everyone engaged in bringing about the changes which he condemns, is at once ignorant, short-sighted, prejudiced, and conceited. Perhaps the most singular feature of his paper is that his prefatory remarks contain an admission which greatly invalidates his whole plea. The one object of his contention is to prove that Japan must not borrow legal systems from abroad but must evolve them gradually out of the circumstances of her own people. Yet he writes at the outset:—"The history of Japan is that of a nation that has never yet had a chance to develop continuously from within on lines of its own, only absorbing such extraneous ideas as are really beneficial." It would seem, therefore, that in acting as she is now acting, Japan merely preserves the continuity of her history, instead of running an unprecedented and alarming risk. But we shall not follow Mr. Masujima farther. It is doubtless wholesome that men like him should be present to apply the brake to the wheel of innovation. The pity is that his mood betrays so much pessimism, and that his criticisms are so sweepingly condemnatory.

KOREA.

A CORRESPONDENT writes from Sŏul, under date November 11th, as follows:—"The word that is in everybody's mouth these days is 'Chiksa,' by which is meant the special envoy who has just come from the Emperor of China to present to the King of Korea that Emperor's commiseration in view of the death of the Queen Dowager. From ancient times there has existed an intimate relationship between Korea and China which can best be described as paternal on the one hand and deferential on the other. Whether this relationship carries with it the idea of vassalage and humiliation is a question that I leave to those who are interested in political problems, and whose training and experience warrant them in expressing a public opinion. Of this one thing I can assure your readers, from personal observation and contact with different classes of Koreans, that the people of Korea look upon this relation as being no more servile or humiliating than that of the son to the father, but as implying thorough reciprocity and mutual good feeling. It may be safely assumed that all discord or chafing that arises is the result of growth in the lesser party. The son eventually reaches the point where in some respects he knows more than the father, and must decide for himself, however it may chafe the elder to see the change. It naturally follows that the elder cannot keep the younger under his tutelage excepting by one of two means, either the elder must keep pace with the younger, or else he must prevent the younger from advancing. But the mathematics of political economy show beyond a doubt that the latter is the only possible way for China to maintain her paternal relation to Korea; for the law of inertia, the fundamental law of Asiatic civilization, says that large bodies move slowly, and that, other things being equal, the velocities of different bodies will vary with their mass. When China therefore gave her consent to the application of an initial force to Korean political and social life in 1882, she laid herself open to the working of inevitable laws. It need hardly be said that those laws are working, and will work, and

consequences will inevitably ensue, but that by no means implies that Korea may not with perfect propriety perform those acts of deference towards China which she has performed from time immemorial, as if, forsooth, a son should show less deference to his father the moment the son has reached an age when he can think for himself, or indeed as if he might not out of deference to that father's mistaken ideas even forego the exercise of certain inalienable rights without being stigmatized as a vassal and a slave! But I have wandered far from my subject. It is in view of the peculiar relations between the two States that whenever a member of the Royal family of either country dies, the other sends an envoy bearing its expressions of condolence. Great preparations were made here for the reception of the "Chiksa." Not far from the great South Gate of Sŏul stands the imposing edifice where all extraordinary envoys from the Court of Peking are entertained. It is a solid imposing structure, built in the best Korean style, and is surrounded as is usual by a great mass of inferior buildings, and around the whole is a high stone wall. This building is occupied only when envoys come from Peking at the time of the coronation or marriage of a King or of a Royal funeral, and consequently on each occasion it requires to be thoroughly overhauled and repainted and re-papered. Had you passed the place a few days since you would have seen a Korean artist standing on a high box against the wall opposite the front gate of this inclosure, painting blue, green, and red lions and dragons on the wall, throwing his soul into yards of blank space with astonishing rapidity, while paper hangers and masons and carpenters were busting in and out with an amount of activity that in Korea is quite remarkable. The mission consisted of two individuals, one a real Chinaman and the other a Manchu. An observer would have been struck by the difference between these two men. The Chinaman was a small delicate man with a rather distinguished air, while the Manchu was a heavy imposing personage with an immense frame and a broad expanse of face. If the difference between these two men illustrates the difference between the pure Chinese and their Manchu conquerors there is nothing surprising in the fact of that conquest. When the envoy was escorted from Chemulpo, twenty-six miles distant, it was found impossible to make the whole distance in a single day, and so the inhabitants of the little village of Oricol, where the half way house is situated, turned out of their houses *en masse* and slept in booths in the fields that the escort might be comfortably housed. The whole road from Chemulpo to Sŏul had been carefully repaired, all the streams were thoroughly bridged and the rough places smoothed. On the day when he was expected to arrive before the gates of Sŏul a large white awning was stretched over the space in front of the residence of the provincial governor; outside the West Gate, where it was intended that the King should first meet the envoy, and at the proper time His Majesty issued from the palace and proceeded to the place of rendezvous, accompanied by his Generals and a number of troops together with the Royal insignia. It was intended that immediately after the salutation the King should return to the palace by way of the West Gate in order to be in readiness to give audience to the envoy when he should enter by way of the south gate. For some reason not generally understood the meeting outside the gate failed to take place, and His Majesty returned to the Palace, where at a later hour he gave audience to the envoy. The envoy was not attended by an escort of Chinese, but only by Koreans, excepting that two Chinese orderlies accompanied him, one walking on each side of his heavy sedan chair. The King's chair was covered with the light brown cloth which is the badge of mourning, and the bearers were clothed in the same colour. The whole dress of the King, though of the finest quality, was of the same colour.

COAL AND IRON.

THERE can be little question that Great Britain

owes much of her mercantile supremacy to her rapid development of her coal and iron works. Present statistics, according to Mr. George G. Chisholm, seem to show that in the rate of expansion of these closely related industries, other countries, especially the United States and Germany, are gaining on the United Kingdom. Thus, if the present average rates of expansion are maintained, it is calculated that in coal production Great Britain will be overtaken by the United States in 1894 and by Germany in 1928. In regard to iron the gain is still more rapid. The growing demand for iron in the construction of extensive railways is the chief reason for the rapid growth in coal and iron industries. In time, when the vaster railway systems are completed, there will be a steadier annual demand for iron; so that the rapid expansion in the production of iron and by consequence of coal will receive a check. There seems no reason to anticipate anything of the nature of a catastrophe from our continual consumption of coal. First the rate of expansion will diminish, then it will become steady, and then begin to decline. The history of the coal industry of any country may be expected to be similar to the history of a single mine—expansion, steady production, decline. It is believed by some economists that the extensive coal fields of China, when once they are begun to be worked in earnest, will be the great source of coal supply for the world. It need hardly be said that such a revolution in things commercial lies very far indeed in the future.

MR. NAKAJIMA NOBUYUKI.

THE *Fiji Shimpō* gives the following brief account of the life of Mr. Nakajima Nobuyuki, who has been appointed by His Majesty's to the post of President of the House of Representatives:—

"Nakajima was born in the 3rd year of *Kōwa* (A.D. 1846), in the town of Kochi, in the Province of Tosa (in Shikoku), and his name in childhood was Sakuraro. In his youth, being told how certain *Rōnin* of the Mito clan conspired and assassinated Ii Kannon-no-kami, Prime Minister under the Tokugawa Government, at Sotosakurada, he was much moved and feeling great admiration for the spirit and energy of the *Rōnin* pledged himself to accomplish something noteworthy, when he reached man's estate. He subsequently became a pupil of Mazaki Tetsuma, of the Tosa clan, a learned scholar renowned for his Imperialist policy, whose school was said to contain many *samurai* of spirit and patriotic feeling. Among his fellow pupils were such men as Ishikawa Seinosuke, Nose Tatsutaro, and Yoshimura Gorotaro, with whom he formed a close friendship and was much respected by them for his high principles. Mazaki and other imperialists having fallen in their patriotic undertaking, and the spirit of the whole clan being greatly broken, Mr. Nakajima is said to have made an oath before his late master's grave that he should labour to revive the chilled enthusiasm of his fellow clansmen. Thenceforth he busied himself forming various plans for the execution of his purpose in conjunction with those who shared his views. Not being rewarded by success for a long period, he left his clan in November of the first year of *Genji* (A.D. 1864) and went to Choshiu. There, fired with admiration for the personal character of Takasugi Shinsaku, a renowned captain of the Choshiu clan, he enlisted in a military company under that leader's flag. At this period, the Tokugawa Government was sending an expedition under the command of the Prince of Owari to punish the disobedience of the Prince of Choshiu, and various opinions prevailed among the latter's followers, several opposing parties being formed. During this disturbance, commonly known as the Choshiu civil war, Mr. Nakajima took an active part in many combats. By and by, having been recognized and his worth appreciated by the famous Sakamoto Riuma of his own clan, who in the prosecution of his patriotic undertakings often visited Choshiu, he followed Sakamoto to Nagasaki, where he joined a company organized for coast defence. Thenceforth he worked always with Sakamoto, and when the latter joined Goto Shojiro (now Count Goto) in advising the Tokugawa Government to restore the administrative power to the Imperial House, Mr. Nakajima was able to render valuable service. The Restoration being at last achieved, in the first year of *Meiji* (1867) he was elected one of the *chōshi* (a limited number of men of conspicuous ability, summoned by the Imperial Government from

each clan) and appointed *Gwaikoku Gon-Hanji* (Vice-Counsellor for Foreign Affairs). Soon afterwards he was nominated Commissioner for Foreign Trade and took charge of affairs connected with the Empire's foreign commerce. In the 3rd of *Meiji* (1870) he was sent by the Government to the United States of America as Commissioner, for the purpose of making investigations into the financial and fiscal systems of the Republic. Immediately on his return, he was appointed an officer of the 6th rank in the Finance Department, and shortly afterwards promoted to be Vice-Commissioner of Revenue. He devoted himself to effecting alterations in the system of land tenure and granting leases, at the same time issuing new fiat notes. In the 7th year of *Meiji* (1874) he was appointed Governor of Kanagawa Prefecture, and, having filled that office for three years, was made a member of the Senate. In the 13th year of *Meiji* (1880) he declared to Prince Arisugawa that it was imperatively necessary to organize the system of *Rikken Daigi* (Constitutional and Representative polity) and to establish a National Assembly. But his views not meeting with approval, he resigned his office and retired from official service. From that time he remained out of the Government, and endeavoured to develop the principle of popular rights. When, in the 14th year of *Meiji* (1881), the Constitutional Party was formed, he was elected by his political friends to be *Sori* (President) of the party. The following year, he travelled with Count Itagaki through the north-eastern parts of the country, and on their return they coalesced with their friends of the Liberal party, Count Itagaki being made *Sori* (President), and Mr. Nakajima Vice-President. On the dissolution of these two political parties, Mr. Nakajima changed his domicile to Kanagawa and lived quietly in Yokohama. But despite his retiring habits, the influence of his presence was always felt among local politicians, and he was returned for the House of Representatives which has now elected him to the honourable post of President.

The same paper gives a biography of Mr. Tsuda Mamichi, Vice-President of the House of Representatives:—

Born on the 6th of December of the 12th year of Bunsei (1829), at Tsuyama, in the province of Mimasaku, he was called in his youth Shinichiro. His forefathers served in the household of the prince of the Tsuyama clan as *Rioriban* (purveyors). When quite young, he came to Yedo and received lessons from Mitsukuri Gempo of the same clan, who was at that period regarded as the best Dutch scholar in the empire. After completing a course of study of Dutch literature, Mr. Tsuda was appointed professor in an institution organized by the Tokugawa Government for the purpose of examining Occidental books. In June of the second year of Bunkiu (1862) he went over with Mr. Nislii Amaneshii (member of the late senate) and others to Holland, under Government auspices, to study the science of law. As there was no one at that time in Japan who knew anything about Occidental laws, Mr. Tsuda and his fellow-students must be acknowledged to have introduced the science of Western jurisprudence into their country. Having studied the science of law sufficiently to be able to understand its general principles, Mr. Tsuda and his companions wrote to their literary friends in Japan explaining that European laws was based primarily on the principle of popular rights. Since, however, the Japanese of that era had no conception of law from the Western point of view, they could not understand the meaning of Mr. Tsuda's exposition, and were unable to translate into Japanese the word used by him (*volken recht*). This was quite natural, for no such words as *jimmin* (people) or *kenri* (right), as understood in the West, were in use in the Japan of those days. Nevertheless, after various essays more or less singular, they succeeded in rendering the words by *min-ken* (people's right), a term used even to this day. Also in his letters, Mr. Tsuda mentioned that civilization consists chiefly in extending communications, but this again greatly puzzled his friends at home, simple as the expression appears to men of the present day. It is interesting to recall these facts for the sake of the light they throw on the condition of Japan in those times. Mr. Tsuda and his fellow-students, on their return, served the Tokugawa Government to the best of their ability, in the rôle of councillors to the administration.

When the Imperial army was about to be put in motion against the Tokugawa Regent, Mr. Tsuda made a proposition as to the step which ought to be taken by the Bakufu. This proposition may almost be said to have foreshadowed his recent election to the membership of the House of Repre-

sentatives and his subsequent appointment to the Vice Presidency. His plan was that a general conference should be held in the Obiroma (the Chamber in the Tokugawa Court where *Daimio* of the first rank used to attend) and in the Hiojoshô (the conference chamber for administrative officers) to decide between war or peace as well as to deliberate on other matters of State. Owing to the anxiety and confusion prevailing at the time among the officers of the Tokugawa Government, this proposition was not carried through, but it shows that Mr. Tsuda, already at that early period, had formed the conception of a parliament. He may justly be considered the first Japanese who advocated the adoption of a parliamentary system in this country. After the Restoration, he served under the *Meiji* Government, and it is said that when the *Shinritsu Kosei* (new penal code law) was completed, he found it very imperfect and condemned it in the presence of Yeto Shimpei (then Minister of Justice) whereupon the latter, became indignant and forthwith took measures to have Mr. Tsuda discharged from office. This incident illustrates Mr. Tsuda's courageous and conscientious character. Subsequently he was appointed to a Judgeship, and after repeated promotions at last entered the Senate, where he remained until elected a member of the House of Representatives. Many other incidents of his career deserve notice, but the above is sufficient for our present purpose.

ITEMS FROM THE "KOKKAI."

THE *Kokkai* has the following interesting items:— "On the 25th ultimo, the Cabinet Ministers attended in the Palace and discussed in the presence of the Emperor, the draft estimates for next year. We are told that His Majesty, while expressing confidence in the painstaking character of the draft, desired the Ministers to be very careful in dealing with the estimates. The Ministers thereupon proceeded to state and explain the comparative increases and decreases in the estimated expenses for the next year. To these His Majesty patiently listened, putting questions about various items. Finally the draft was left with His Majesty, who did not return it approved until the 27th ultimo. According to the usual routine, the estimates should be first discussed in the Cabinet and then submitted to the Houses. After passing through the Houses, they should be laid before the Emperor. But as this is the first session of the Diet, His Majesty was anxious to see the draft before it went to Parliament.

"Some people allege that there are indications of haste and confusion in the Cabinet at present, but we are told that after the problem of Treaty Revision had been discussed by the Cabinet, it was left for further consideration by the officials in charge of the work, and has not been again brought forward in the Cabinet. Moreover, the estimates for next year have been passed by the Cabinet and laid before the Emperor, so there is nothing to worry Ministers at present. They are consequently enjoying temporary leisure after the extremely busy time of the past ten months. It is to be hoped that they will recruit their physical strength and appear on the novel political scene with renewed vigour."

"Different suggestions are made about the appointment of Government representatives in the Diet. We hear that the Authorities have decided to delegate the task to Vice-Ministers joining with them the Heads of the different Bureaux. The Heads of Bureaux will attend the Diet only when questions crop up which the Vice-Ministers are unable to explain. Ministers may themselves appear, however, to give explanations, except in the case of the Departments of Home Affairs, Army, and Navy, the Vice-Ministers of which will hold themselves responsible for all explanations. At committee meetings of the Diet, Heads of Bureaux, Councillors, Secretaries, and so forth will attend, whenever their presence may be required, to answer questions put by the Committee."

"Now that the opening of the Diet is an accomplished fact, everybody is anxious to know in what order the different Bills will be submitted. We are informed, however, that with the

exception of the regulations for the Diet, which will be first discussed and the estimates which will constitute the next business, no order for submitting the Bills prepared by the different Departments has been yet fixed."

"The law of registration now in force was promulgated in the 4th year of *Meiji* (1871), and contains many imperfections. It is said that with the view of introducing a Bill for the amendment of the law Councillor Kuroda and others are engaged in preparing a draft. The principal alterations consist in changing the fundamental principle of the registry system and abolishing the present distinctions between *honseki* (original domicile) and *kiriin* (temporary domicile), thus making the actual place of residence the domicile for registration purposes. Everyone has the right of removing his residence freely according to his wish, as is plainly provided in the Constitution. But according to the present system of registration, a distinction is made between original domicile and temporary domicile, and unless a man goes through the form of changing his original domicile, however long he may have lived in a place he finds in many cases that he cannot enjoy the rights of a resident. For instance, take the case of the law of election of the members of the Diet. It is there required that a man fix his place of original domicile and live in it for a certain length of time. Otherwise he has no right to elect or to be elected. Such restrictions are contradictory to the spirit of the Constitution and should be modified."

THE DIET REBUKED.

"In any meeting," says the *Nichi Nichi Shim-bun*, "despite the opinions held by individual members, all must be bound by the will of the majority. If every member adhere to his own view and, after a resolution is passed, tries to rebel against the result, how can a meeting be conducted and how can a decision be practically reached? On the occasion of the election of the President and Vice-President in the House of Representatives on the 25th ultimo, a member moved that, inasmuch as however often the ballots were taken, it was impossible to get a majority of over one half, the mode of election should be amended and the names obtaining the highest numbers of votes taken in order. The acting President declined to put the motion as being opposed to the law of the House. But when, after balloting more than twice, the majority of over one half could not be obtained, the Chairman consented to submit another proposal for taking the highest numbers as they stood, without reference to the nature of the majority. This caused a commotion. The Chairman was rebuked for acting contrary to the law; a rebuke which virtually nullified the resolution passed by the assembly. Can this be called proper action on the part of the members of the House? We shall not here examine the question of whether the action of the Chairman was improper, but even granting it to have been so, as soon as the motion had been carried by a majority of some two-thirds of the members present, the method of taking the highest numbers in order without reference to the prescribed majority, ought to have been regarded as a decision of the House, and though individual members might object to the action of the President in permitting the motion, they had no business to disobey the important principle that the House is bound by the majority of its members in all matters. If this were not so, what would be the value of a resolution? Were such conduct permitted, order and quietness could never be secured. Some may contend that this was an exceptional case arising out of the improper and illegal manner in which the Chairman admitted the motion. But that is no reason for refusing to be bound by a resolution carried by a majority of the House. A vote of two-thirds of the House cannot be ignored afterwards on the ground of illegality. The only way to render a resolution null, is to pass another resolution in the opposite sense. To disregard what has been voted by a meeting

and set it aside simply as being illegal, is in fact to trample on the first principles of parliamentary procedure. The thing is past now, but we refer to it for the purpose of warning members of the House against falling into a similar mistake hereafter."

A RAID ON AMERICAN BOOK PIRATES.

From the *Nation* we learn that a blow has at length been struck at the American book pirate, from which he is not likely to recover. The catastrophe seems to have arisen from the invention of a cheap process for reproducing books by photography. With this weapon the pirates began an attack on various expensive foreign books. The principal object of onslaught was the "Encyclopædia Britannica," the English edition of which costs \$9, and the American (Scribner's) \$5 a volume, the pirates being enabled by the new process to sell it at about \$1.50 a volume. A swarm of corsairs attacked this devoted work and soon the market was flooded with cheap copies obtained by means of the photograph. But the pirates had overlooked something. The "Encyclopædia" contained among other things many articles and maps by distinguished American authors, and this trifling circumstance enabled the Messrs. Black, conjointly with their American agents, to bring an action in the United States Courts against one of the buccaneer firms, asking that the latter should be enjoined to abstain from further publication, and required to account for the proceeds of past depredations. The pirates claimed that if an American allows his property to be mixed up with a foreigner's property, which his Government does not protect, he cannot complain if they appropriate without discrimination whatever comes first to hand. They even pleaded that the insertion of the American articles was simply a trap set to catch industrious pirates, and that thus the trapper could not expect redress, coming into Court with hands that are not over clean. It has been ruled, however, that an American does not lose his title to his property by mixing it with other property, the lawful plunder of the pirates, and that "a citizen of the United States who is the owner of a copyright can assign the whole of such copyright to a foreigner." Final judgment in the case has not yet been rendered, but the *Nation* opines that under this ruling there can be no doubt as to what it must be. We reproduce the remainder of our contemporary's article:—

From all this is deduced the conclusion that the plaintiffs, by sprinkling American articles over the pages of the "Encyclopædia," meant to impede or hinder the exercise of that sacred right of plunder which Congress meant our citizens to exercise without stint, and have been guilty of an unworthy trick. Therefore, says the pleader—were he in any other calling we should call him a sorry wag—"From the standpoint of sound morals and acknowledged judicial principles, the defendant herein is the meritorious party; the complainant is a Philistine from afar, seeking to reap where he has not sown. The American market was not for him. All his legitimate hope of profit lay in the tillage of other fields. For these, and not for ours, he dug his irrigating ditches and expended his labour. If the overflow has passed his boundaries and by American enterprise is made to fertilize our territory, he is none the poorer, and his claim to control our fields as he would his own is simply the brazen audacity of the buccaneer." These passages are sure to go the round of the civilized world as a huge American joke, but we warn foreigners that they are nothing of the kind. They are sober earnest, as understood in a respectable law office in this city.

We have amused ourselves, after recovering from the reading of them, by putting the argument in the mouth of a Dey of Algiers in the old days addressed to his Christian captives just brought in by one of his corsairs:

"Christian Dogs, what are you whimpering about? You knew when you started on this voyage, with your valuable cargo, for Smyrna, as you say, that you would have to pass through the Mediterranean, and that this sea has been for two centuries infested by my cruisers. You knew that we have practised piracy on such as you for many generations, and that it is necessary to the comfort and prosperity of this State and city. You knew it brought us wealth, and stimulated the energies of our young men and spread the fame of our flag. You knew, in short, you snivelling infidels, that you would probably be captured before you had got half way down the sea. Why did you sail on such a venture if you did not like being captured and losing your goods? You knew perfectly

well, too, that there was nothing wrong in seizing your ship and selling you into slavery, because if there had been anything wrong in it, I or my predecessors should have forbidden it by an edict long ago. There is no law in Algiers against it, and therefore it is right. My captain reports, too, that you had guns on board and used them to resist capture desperately. You actually used weapons and shed blood, besides extinguishing your lights at night, in trying to prevent my subjects exercising their lawful calling, showing what an accursedly wicked and undeserving crew you are. In order to give you a lesson in really high morality, you shall, each of you, have two dozen on the soles of your feet, and be sold cheap, so that poor men may get hold of you."

SHIP LAUNCH.

At 4 p.m. on Saturday last, says the *Nagasaki Express*, the *Dai Ichi Sasebo*, a new steel vessel for the Sasebo Naval Station, was successfully launched from the Mitsu Bishi Shipbuilding yard at Tategami, the christening ceremony being performed by Admiral Tsuboi, I.J.N., representing the Naval Department. There were also present, the Admiral's staff, Captain Ogata, I.J.N., and Mr. K. Yamagata, naval engineer; Messrs. M. Yamawaki (director), J. F. Calder (manager), R. Midzutani (engineer), J. G. Reid (ship constructor), and others; and a large number of native and foreign visitors. At the appointed hour, Admiral Tsuboi was escorted to the platform under the vessel's bow, where he made a short speech, after which the signal was given, and, the vessel being released, she glided gracefully into the water, amidst the cheers of the spectators. The party then adjourned to the moulding loft, where, in response to a speech from Mr. Yamawaki, the success of the ship was toasted, coupled with the name of Admiral Tsuboi. A brief reply from Admiral Tsuboi concluded the proceedings. The following are the dimensions of the new vessel, which is intended to be used as a tow-boat, and for laying torpedoes. Length over all 122 ft. 6 in., length between p.p. 118 ft. 0 in., breadth, moulded, 20 ft. 6 in., depth, moulded, 13 ft. 0 in., displacement about 250 tons, speed 11 knots.

MR. YANO FUMIO.

We mentioned some time ago that considerable surprise had been caused by the public withdrawal of Mr. Yano Fumio from the field of politics. Mr. Yano had long been a prominent member of the *Kaishin-to*. Indeed, after Count Okuma's acceptance of the portfolio of Foreign Affairs, the leadership of the Progressionists was generally considered to be in Mr. Yano's hands, and his retirement consequently took people greatly by surprise. Curiosity will be still further whetted by an announcement in the *Nippon* that he has been appointed, or is about to be appointed, an attaché (*shushji*) of the Imperial Household Department with a salary of three thousand yen annually. This looks as though Mr. Yano were about to return to official life. We cannot suppose that a man of his capacities and ambition contemplates consigning himself to a sinecure in the Household Department.

ANOTHER FIRST FRUIT.

We have now had the first speech ever delivered in a Japanese constitutional assembly, and the election of the first President. The next item in this catalogue is the first mistake. It was made by Mr. Suyehiro, of whom nothing was less to be expected. It appears that in balloting for President two boxes were provided, one to receive the names of the members voted for, and the other to receive the names of the members voting. Mr. Suyehiro confounded the boxes, and put his own name into that for President, and the President's name into the other box. He thus played the curious part of voting for himself. This same Mr. Suyehiro was also the first to make a speech in the House, so that he now enjoys the dual distinction of heading the list of debaters and also the list of blunderers.

A NEW TYPE OF HARMONIUM.

We understand that the Japanese Government has given an award of \$1,000 to Dr. Shohel Tanaka, a graduate in science of the Tokyo

University (1882) and of the Berlin University (1889). In Germany he devoted himself specially to the study of sound and of music, and is no doubt the first Japanese who has obtained an intimate knowledge of Western music on its practical, theoretical, scientific, and historic sides. On the purely scientific side he has added to our knowledge of the laws of vibrations of plates, and has also communicated to musical literature several papers of interest. One of these contains an account of a harmonium which he has devised and which is tuned in practically pure intonation. From a cursory glance at the contents of this pamphlet, it is difficult to pick out the really original matter in it. Judging from the references and foot notes, we may conclude that the author has read widely, and that he is warranted in claiming to be the first who has constructed a keyed instrument capable of giving practically pure chords in all the usual keys and of being played almost exactly as a piano or an organ is played. The manual is, to a first glance, very similar in appearance to the ordinary organ or piano manual. But a closer inspection shows that a short black note is introduced between E, and F, and that the other black notes are divided into two or even three. In all there are 20 distinct notes within the compass of an octave, instead of the usual 12 in our instruments of equal temperament. Dr. Tanaka's white notes are tuned to the perfect major scale of C, the E being therefore considerably flatter than the note of the same name on the piano. If it is desired to play on the scale of D, this E, the true major third to C, must not be used. A slightly but appreciably sharper note must be used, and this is inserted between D and E in front of the ordinary black note known as D sharp or E flat. Strictly speaking, as on Bosanquet's organ for instance, D sharp and E flat are really different notes, but the difference is too slight to be practically appreciable. In Dr. Tanaka's scheme, however, the requirements of modern transpositions in music necessitate a C sharp distinct from D flat. Whatever may be the merits of Dr. Tanaka's "Enharmonium"—so named by Von Bulow—this at least is certain, that any simple method for attaining in keyed instruments a juster intonation than at present holds deserves the strong encouragement of all true musicians.

THE SESSION OF THE DIET.

THERE seems to be a strong probability that the first session of the Imperial Diet, instead of terminating on the 27th of February, as would be the case under ordinary circumstances, will be prolonged until May or even June. The various political parties are understood to be unanimous in desiring a six months', instead of a three months' session, and the Emperor is likely to sanction a prolongation of two months at least. The present idea is that the discussion of the Budget alone will probably occupy some three months of the Diet's time. This estimate appears, at first sight, extravagant, but it must be remembered that the first Budget debated by the first Diet will involve several difficult and momentous questions. At the outset there will be the reading of the celebrated Sixty-seventh article of the Constitution. We may be sure that many members will entertain extremely divergent views about the precise signification of the words "already fixed expenditures based by the Constitution upon the powers appertaining to the Emperor," and that it will be a task of great difficulty to carry conviction to the minds of a majority of the House in favour of any particular interpretation. The competence of Parliament in respect of finance depends largely on the rendering of this Article, and if the Diet is at all ambitious to widen its fiscal functions, it will fight hard for a more liberal interpretation than that given by the Government ordinance according to which the Budget for next year is compiled. This question settled, there will be the problem of reducing taxation and expenditure. Every one of the political parties has pledged itself to the nation in this matter, and there will be a hard fight to redeem the pledge. The first two months of the session will presumably include

a recess of at least ten days at the New Year, and if ordinary and special holidays be further subtracted, it appears that the total number of days available for debate will not exceed forty. That does not seem an excessive time to allow for the discussion of what is incomparably the biggest item on the Diet's programme. Supposing then that the session were limited to the time fixed by the Constitution, only one month would remain for the projects of laws to be submitted to Parliament, according to the Speech from the Throne. As yet it is not quite certain what projects of law are contemplated, but all accounts agree in naming the following, in the order here stated:—(1) A project for the establishment of three new Banks, namely, a Bank of Movable Property, a Bank of Immovable Property, and a Bank of Agriculture. (2) A Bill relating to Local Debts. (3) A project of Poor Laws. (4) A Bill relating to communications. (5) A Bill relating to Registration. (6) A Bill for the parcelling out of Districts. (7) A Bill concerning the examination of Judges of the Courts of Conciliation. (8) A Bill relating to Regulations relating to Barristers. (9) A Bill relating to Weights and Measures. (10) A Bill relating to Sericulture. Four months would scarcely suffice for the discussion of all these measures. Thus, even supposing the session to be extended to May or June, there would be no time for the Diet to inaugurate anything on its own account, unless the Government consented to a wholesale "slaughter of the innocents."

THE PEERS' ADDRESS TO THE EMPEROR.

The following is a translation of the Peers' Address to the Emperor, in reply to His Majesty's speech at the opening of the Diet:—

May it please Your Gracious Majesty:—

We, Your Majesty's (loyal and faithful) servants, the Members of the House of Peers, most humbly and respectfully desire to present an address to Your August and Enlightened Majesty.

Your Gracious Majesty's virtues are daily becoming more illustrious. Your Majesty has been pleased to promulgate a great charter and establish the Diet, thereby to collect the ideas of the many, and to promote, in concert with the people, the progress of the country. And now Your Gracious Majesty has been further pleased to call together both the Houses of the Diet, and to honour the House of Peers with Your Majesty's presence therein for the purpose of celebrating the opening ceremony, and has, moreover, been pleased to do us the honour of addressing to us Your Majesty's benevolent Speech. We, Your Gracious Majesty's servants, wishing with all our heart for the prosperity of the Empire, and praying for the happiness of Your Majesty's subjects, most humbly pray that we may be permitted to offer our advice for Your Majesty's wise consideration, by expressing our humble opinions in strict accordance with the great Charter. Thus most worshipfully have we ventured to address Your Gracious Majesty in reply to Your Majesty's benevolent Speech."

The reply of the House of Representatives was much shorter. It ran as follows:—

"We most respectfully beg to express our unbounded gratitude and satisfaction that Your Majesty has deigned to open the Imperial Diet and to address to us, Your Majesty's subjects, a gracious Message. We humbly assure Your Majesty that no exertions shall henceforth be wanting on our part to fully discharge our legislative responsibilities, and to be faithful to the trust reposed in us by our Sovereign and by the people of His realm."

These Replies were carried to the Palace yesterday by Count Ito, President of the House of Peers, and Mr. Nakajima, President of the House of Representatives. The Emperor's answer was brief, but we have not yet procured an authentic version of it.

THE DIET AND EDUCATION.

THE *Koku-Hon* calls upon educators, especially affiliates of private educational societies, to pay attention to the important educational questions now agitating the minds of the Members of the Diet. All the parties represented in the Diet have been engaged of late in the so-called "in-

vestigation of political affairs," and in constructing programmes of questions to be brought before the Diet. These programmes contain some important topics relating to education. Our contemporary, however, fears that the great majority of the members of the Diet being better qualified to pass judgment on almost any other subject than education, grave and irretrievable blunders may be committed by the first legislature in respect of educational matters. The private educational societies which are found throughout the country, are, therefore, charged at this juncture with a serious responsibility. They are all bodies of men more or less well acquainted with educational matters, and fully competent to form practical and trustworthy opinions about affairs connected with their speciality. These bodies being, moreover, independent of all Government control, are specially qualified to command respect in the eyes of the representatives of the people. They are, therefore, advised by our contemporary to lose no time in preparing memorandums containing their own views on the more important among the educational questions now engaging the attention of the Members of the Diet. Three of such questions are mentioned by the *Tokyo Journal*; namely, first the independence of the Imperial University and other Government schools devoted to special branches of knowledge; secondly, the abolition of the Higher Middle Schools, and the addition of a higher course to the curriculum of the Ordinary Middle Schools; and thirdly, the establishment of closer relations between Ordinary Middle Schools and Ordinary Normal Schools. Private educational societies should discuss these questions and others of like nature, and should make known their opinions to the Members of the Diet. The *Koku-Hon*, by implication, blames the indifference shown by those engaged in education about the fate in the Diet of questions included in their special field of activity.

DEMOCRACY IN JAPAN.

THE *Nippon-Hyoron* maintains that Democracy is not a new thing in Japan. From the time of Jimmu-Tenno until the present day, says our contemporary, the history of Japan has indicated the gradual growth of democracy. At first the Emperor was the sole and absolute ruler of the realm, but soon the house of Fujiwara became so powerful that they put effectual checks and limitations upon the prerogatives of their sovereign. From the Fujiwara, the executive functions passed into the hands of their subordinates, the warrior class. Among the representatives of this class, the Tokugawa dynasty was the strongest and the last. But with the appearance of American vessels in the waters of Yedo Bay, the Imperialist movement began to agitate the public mind. It resulted in the emancipation of the masses from the absolute sway of the military class. The celebrated Satsuma Rebellion proved that the farmers and artisans, when properly trained and disciplined, are not inferior to *samurai* on the field of battle. So much did the popular cause prosper after that war, that in 1881 the people were able to obtain a promise from the Emperor to grant them a constitutional form of Government by the year 1890. The promise has been kept, and the nation is now entering upon its new career of parliamentary progress. Thus our contemporary is of opinion that the ultimate drift of the past history of Japan has been towards the establishment of representative institutions, political power having been gradually and steadily transferred from the few to the many until the whole nation has at last obtained a share of it. "Of the numerous countries of the Orient, is there any," asks the *Tokyo Journal*, "that can show such a history? The history of neither China, India, nor Korea, exhibits the tendencies that are discernible in the history of Japan." The *Nippon-Hyoron*, therefore, considers that Japan is designed by Providence to be the fore-runner of freedom and liberty in the Orient.

Our contemporary seems to go a little too far in saying that the history of Japan has been the

history of democracy. But we venture to think that there is a germ of truth in its opinions. When Yoritomo founded his feudal government at Kamakura towards the close of the twelfth century, he established once for all a kind of crude constitution which none of his successors, even the Tokugawa dynasty, could afford to disregard. We need not now enter into a detailed examination of that constitution. Its principal features were that the Emperor was the repository of the sovereign power of the State, that the Shogun exercised the executive power by virtue of the Imperial commission, that the Emperor was sacred and that the executive responsibility devolved upon the Shogun. These principles of Government were not formally put in writing, but they were plainly established by Yoritomo in practice, and followed in all subsequent ages by his successors. The difference between this form of Government and the modern constitutional system, is that, whereas in the latter, statesmen commanding the confidence of Sovereign and people form the Cabinet, in the former the executive authority was vested in the possessor of the strongest battalions. We may assuredly say of Japan's history that for nearly a thousand years she has had no experience of an absolute or despotic monarchy. Such a state of affairs was certain to lead some day or other to the people's enfranchisement.

THINGS MUSICAL.

We are much indebted to the recent Organ recitals at the Union Church in more ways than one. Not only have they provided us with some excellent performances, but the proceeds have cleared off the outstanding expenses connected with the Organ itself; and the Church now possesses an instrument of which the members may well be proud, which stands entirely free from debt or encumbrance of any kind. But we have something further still: the ladies and gentlemen who gathered as a chorus to support Mr. Griffin's playing with vocal music, have become the nucleus of the revived Choral Society. Our readers will be glad to learn that the renaissance was completed last evening at a special meeting in the Van Schaick Hall; when the Society was inaugurated, confirmed, and thoroughly set going once more. The Constitution and Bye-laws of the old Society were adopted *en bloc* for the new one; officers were elected; the practice night fixed for Wednesday; the *locale* settled as the Van Schaick Hall (where the Society will have the advantage of two instruments, piano and organ); and the first practice will be held next Wednesday, December 10th, at 5.30 p.m. under the direction of Mr. Keil. The following are the officers and Committee elected for the current season:—

President Mr. GRIFFIN.
Vice-President and Conductor Mr. KEIL.
Secretary and Librarian Mr. C. V. SALE.
Treasurer Mr. TOWNLEY.

The other four members of Committee are Miss Moulton, Mrs. Page, Mrs. Poole and Mrs. Wheeler. With such an array of earnest workers at the head of affairs, we have no fear of the society becoming comatose; and we look forward with much pleasurable anticipation to the first performance of the Society. All intending members who are not yet on the roll should lose no time in communicating with Mr. C. V. Sale, at 94, Settlement, or 60, Bluff.

THE DIET.

THE members of the House of Representatives did not meet on the 26th ultimo, but at 10.20 a.m. on the 27th they took their seats in the Chamber. The Chief Secretary, Mr. Sone, then conducted the President and Vice-President to the platform, and introduced the former to the House. The President made the following short address:—"Gentlemen, I esteem it a great honour to have been to-day appointed, by your recommendation, to the honourable post of President. It is my intention to be assiduous in the discharge of my duties, with due observance of the Constitution and of the Law of

the House." At the conclusion of the address the members cheered. A slight mistake occurred here. Before Mr. Sone could introduce the Vice-President, Mr. Masuda Shigeyuki rose in his seat, and in the name of the House congratulated both the President and the Vice-President on their appointment. This error created some merriment, and the members gave hearty cheers. The Vice-President was then introduced. He also made a short speech, and received a hearty reception. Mr. Nakashima then took the chair, Mr. Tsuda returning to his seat below. Mr. Masuda was selected to congratulate the President and the Vice-President, on account of his age. He is the second oldest member. The oldest, Mr. Endo On had excused himself on account of the feebleness of his voice. The House then divided into 9 sections, each section being headed by a Chief and Director as follows:—

Section I.	Chief.....Mr. Maeda Kagashi. Director.....Mr. Matsuo Kagetaka.
Section II.	Chief.....Mr. Ando Kyukwa. Director.....Mr. Ota Munoru.
Section III.	Chief.....Mr. Kinoshita Sukeyuki. Director.....Mr. Maki Bokushin.
Section IV.	Chief.....Mr. Itakura Chu. Director.....Mr. Takata Sanae.
Section V.	Chief.....Mr. Kusumoto Masataka. Director.....Mr. Kataoka Kenkichi.
Section VI.	Chief.....Mr. Inouye Kōkaku. Director.....Mr. Matsuda Kichisaburo.
Section VII.	Chief.....Mr. Kobayashi Kusuo. Director.....Mr. Ozaki Yukio.
Section VIII.	Chief.....Mr. Abei Iwane. Director.....Mr. Suzuki Manjiro.
Section IX.	Chief.....Mr. Masuda Shigeyuki. Director.....Mr. Suzuki Shigeto.

The division into sections was effected according to the order of the members' numbers. The appointment of the Chiefs and Directors was made by vote in the private rooms of each section. After some unimportant debates, the House adjourned at a little past two in the afternoon.

The Diet has been engaged since the day of its official opening in various business connected with its own organization. On Monday, the 1st instant, the House of Peers met and proceeded to elect a Chairman of the Committee of the whole House. The Constitution provides that in each Chamber there shall be Committees of three kinds, a Committee of the Whole House, a Standing Committee, and Special Committees. The first named Committee consists of the whole number of members of the House, and its Chairman is of course an official of great importance. When the House proceeded to vote there were 206 members present, and of these 89 voted for Mr. Hosokawa Junjiro, the next on the list being Count Higashikaze with 33 votes, Marquis Hachisuka with 30, and Viscount Tani with 25. Mr. Hosokawa was formerly a Senator, and acted as *Kanji* of that body for several years. The Standing Committee of 90 members was then elected, and divided in the following four Branch Committees:—First, a Committee for determining the Qualifications of Members (*Shikaku-shitsu In*), consisting of Prince Iwakura and eight others; secondly, a Committee of Finance (*Posan In*), consisting of Marquis Ikeda and forty-four others; thirdly, a Committee of Discipline (*Chobatsu In*) consisting of Viscount Kuroda Kyotsuna and eight others; and fourthly, a Committee for Memorials (*Seigan In*), consisting of Prince Tokugawa Iyesato and twenty-six others. It is stated in well informed quarters that the composition of this Standing Committee is eminently favourable to the Government. The Peers then proceeded to consider the Rules of the House, a draft of which had been in their hands for some days, and had undergone slight amendment by the various Sections into which the members are divided for business purposes. The amendments being accepted by the House, the Rules were passed without further discussion. It was then decided that as no business offered for immediate debate, the House should adjourn until the 4th instant at 10 a.m., when a project of law relating to barristers would be submitted by the Government, and the House would appoint a special Committee to consider the draft. An applica-

tion for leave would also be made by Prince Mori, of Choshu.

The House of Representatives met at 10 a.m. on the 1st instant. The business of the day was to debate and vote upon the Rules of Procedure, a draft of which had been handed to each member on the opening day (25th ultimo) by the Secretaries. Before commencing the debate the President read to the House various congratulatory telegrams received from the electoral districts, and also announced two rules, namely, that any member attempting to speak without the President's permission would not have his remarks entered in the records, and that in the event of dispute or quarrel between members, the stenographers should take down only the circumstances of the affair, not the language employed. The House then proceeded to the business of the day. Mr. Uyeki Yemori rose and proposed that, as the Rules of Procedure had not been passed, a Special Committee should be appointed to examine them. This proposition led to some discussion. The Constitution provides that Bills submitted by the Government shall never be voted upon without having been first examined by a Committee, and since the draft Rules of Procedure had not been compiled by the House itself but by the Secretaries, some members were disposed to regard them as a Government Bill. The majority, however, was opposed to this view. The Rules had been examined by Committees of the three parties, the *Rikken Jiyu-to*, the *Taiseikai*, and the *Kaishin-to*, and various amendments having been made, the Committees had met in the Parliamentary buildings on the 29th ultimo, and had come to an agreement about the draft. The members were therefore willing, for the most part, to pass the Rules without further delay. But many objected. While Mr. Uyeki's motion was under discussion, Mr. Suyehiro Shigeyasu rose, and said that as the session was public, he proposed that visitors be allowed to enter. This led to another discussion, some members urging that until the Rules of Procedure had been passed, no method of controlling visitors existed, and they ought consequently to be excluded; while others argued that as no Bill was under debate, visitors could gain nothing by entering the House. Ultimately it was decided that the doors should be opened, and thirty-four visitors, including newspaper reporters, entered the gallery. The House then resumed its discussion of the Rules of Procedure. Some members maintained that to pass a body of Rules containing over two hundred provisions was a business demanding mature consideration, while others asserted that not even a second reading was necessary. Ultimately the House divided, when 156 voted for the immediate passing of the Rules and 102 for fuller consideration. The President then announced that the business for the next day would be the election of a Chairman of the Committee of the whole House, and the election of the Permanent Committee.

The House of Representatives met at 1 o'clock in the afternoon of the 3rd instant. The President announced that a record of the proceedings would be printed daily and distributed with the *Official Gazette*. The business of electing a Chairman of the Committee of the whole House, as well as a Standing Committee was then undertaken. The question whether balloting should be by name or by numbers led to some discussion, but the latter method was finally decided upon after a division. The voting papers having been distributed, Mr. Aoki Yeiji drew attention to the fact that on the occasion of the ballots for President and Vice-President, some facelike had been written on the papers. He trusted that if anything of the kind occurred again, the papers would not be read aloud. Mr. Matsuo Shinkuro observed that the President did not appear to be voting, and proposed that he should do so in his capacity of member. The House approving, the President was furnished with a balloting paper. On casting up the first ballot, no member was found to have obtained the necessary number of votes—more than one half of all those present. Mr.

Asano thereupon proposed that informal ballots should not be counted in the total of members voting. Mr. Suyematsu Kencho pointed out that the rule, was clear upon this point, and could not, in his opinion, be altered. The President put the question to the House, whereupon the majority voted against Mr. Asano. Another ballot was then taken, but it proved equally unsuccessful. Among the balloting papers five had been handed in blank, and on one two names had been written. The President pointed out that members handing in blank papers were guilty of want of respect to the House, and requested that such a proceeding should be abandoned. Mr. Oyagi Biichiro again raised the question of excluding from the account all informal papers. Mr. Inouye Kakugoro pointed out that if this were done, Mr. Kono Hironaka would be found to have the required plurality of votes. Mr. Seki Naohiko proposed that another ballot be taken, but Mr. Oye Taku urged that the Rule did not speak of three ballots, but only of two, and that consequently Mr. Kono must be considered to have been elected. This gave rise to a discussion. The voting at the first ballot resulted thus:—Mr. Kono Hironaka 130, Mr. Shimada Saburo 101, Mr. Kusumoto Masataka 34, and Mr. Suyematsu Kencho 9, the total number of members voting being 202. On taking a second ballot, the numbers stood:—Mr. Kono 143, Mr. Shimada 141. After a discussion of some length, the House proceeded to a third ballot, the issue being that 149 votes were cast for Mr. Shimada and 136 for Mr. Kono. The former gentleman was therefore declared elected. The House then adjourned.

The Diet can scarcely yet be said to have put on its harness completely. The House of Peers received, on Tuesday, the first Government Bill ever submitted to a Constitutional Assembly in Japan. It was a bill for the amendment and control of the system of weights and measures in Japan. The following day (3rd instant) copies of this Bill, together with the explanatory document accompanying it, were distributed to the members, and they were at the same time furnished with copies of the Rules of Procedure and lists of the Permanent Committee. No debate will take place upon this Bill until it shall have been examined by a Special Committee, as provided by the Constitution, and the same is true of another measure submitted yesterday to the Peers, namely, a Bill relating to Barristers. Mr. Mitsukari, Vice-Minister of Justice, has been entrusted with the conduct of the latter Bill.

The House of Representatives may be said to have opened its debates yesterday. It will be remembered that, on the 25th ultimo, when the business of electing a President and Vice-President was in progress, Mr. Suyematsu Saburo endeavoured to obtain the sense of the House with regard to the case of Mr. Mori, member for the Kitatoshima district of Tokyo, who is now lying in prison charged with embezzlement. The Constitution provides that "the members of both Houses shall, during the session, be free from arrest, unless with the consent of the House, except in cases of flagrant delicts, or of offences connected with a state of internal commotion or with a foreign trouble." Mr. Mori was arrested before the session commenced, and before the date of its commencement had been fixed. But he is still in arrest, and consequently unable to take his place in the House. Mr. Suyematsu sought to raise this question at the time of the election of the President and Vice-President, but he was ruled out of order by the acting President, Mr. Sone; a ruling with which we confess ourselves unable to agree, for assuredly all questions relating to the presence or absence of members have a very direct bearing on the result of a ballot by the House. Mr. Suyematsu, however, had no choice but to bow to the acting President's decision, and to defer his motion until the 4th instant, when it was placed first in the order of the day's business. After this discussion the House was to proceed to the election of a Committee of Qualifications, and then the

following Bills were to be submitted to it by the Government, namely, the ordinary Budget for next year; the extraordinary Budget; a Bill relating to official agreements involving national pecuniary responsibilities; a Bill for the relief of the poor; and finally a draft of amendments of the Rules of the House. It may be added that, on the 2nd instant, the House agreed to amend the second clause of the 30th article of its Rules, so as to read:—"In the event of no candidate receiving more than one half of the total number of votes, the two candidates who have received the greatest numbers shall be balloted for again, and whichever of them obtains the larger number shall be declared elected." This amendment will prevent any recurrence of the difficulties encountered at recent elections.

FACETIÆ IN THE DIET.

DURING the thirteen hours' sitting of the House of Representatives on the 25th ultimo, some of the members appear to have thought that they were entitled to relieve the monotony of the proceedings by writing facetiæ on the balloting papers. It is said that when the Chief Secretary, who acted as President, opened the ballots at a certain stage of the proceedings, and proceeded to read them aloud to the recording clerk, he came to one which, instead of a member's name, contained the words "*chon mage*," a popular expression for the old fashioned queue of pre-Reformation heads. Mr. Yoshino, one of the candidates for the Vice-Presidency, still wears his hair in his style, and the acting President concluded that the vote was intended for him, but of course declared it invalid. Another member wrote "*rokumei tomo teki-sezu*" (the whole six candidates are unsuitable); another, "*rokumei tomo futekito, shoto to mitomeru mono nashi*" (all six are unfit; not one is properly qualified). Yet another discontented member sent in his paper without writing anything at all on it, and finally a fifth wrote "*Kono peke*," which we need scarcely inform pidjin-speaking foreigners means "away with Kono." This incident supplies an answer to the liberals who advocate a reduction of the age of qualification for members of the House of Representatives. Some of those who have been elected are evidently still a trifle youthful for grave legislators.

THE ACTING PRESIDENT OF THE HOUSE OF REPRESENTATIVES.

MR. SONE, Chief Secretary of the Lower House, who as Acting President sat for thirteen hours consecutively on the opening day without taking any refreshment or leaving his place for an instant, has naturally received much praise for this feat of endurance. One of the vernacular journals recalls a still more remarkable instance which it says occurred at Westminster in the year 1742, when the Speaker of the House of Commons remained in his seat for seventeen hours. We cannot recall this incident, but doubtless our contemporary speaks with knowledge. The beginning of 1742 witnessed the stormy debates that preceded the resignation of Walpole, and it may be that on the memorable occasion when Sandys moved for an address to the King to remove Sir Robert Walpole from the councils of the nation for ever, the speaker sat for the time mentioned by the *Nippon*. Be this as it may, Mr. Sone's feat is decidedly worthy of permanent record.

HOW TO KEEP ONE'S AFFAIRS IN ORDER.

WE have received a copy of that most useful publication, Messrs. Kelly and Walsh's "Imperial English and Chinese Diary." It is an old friend, but we always greet with pleasure its arrival in the fall of the year, remembering how immensely serviceable it has been to us in the past. Very few people have the faculty of order, a faculty which helps more materially to success in life than mere ability. We who are lamentably without the gift, appreciate its value, and are correspondingly grateful to this Imperial Diary which has materially helped to supply the deficiency. Any one who keeps the Diary on his desk, and resolutely accustoms himself to

record therein his engagements and intentions, will find the burden of his everyday business immensely lightened.

MISS BIRD IN PERSIA.

MRS. BISHOP, better known as Miss Bird, has been devoting her characteristic energies to the exploration of unbeaten tracks in south-west Persia. After following up the river Karun in Louistan to its source in the Bakhtiari Mountains, she crossed north-westwards over a series of wild mountain ridges and explored several of the tributaries of the Ab-i-Disful. The peaks in this region rise to a height of 15,000 feet; and the lower hill slopes bear heavy crops of wheat and barley. Mrs. Bishop and her party encountered many robber tribes and narrowly escaped extermination on several occasions. After recruiting from an attack of fever and dysentery, she has now proceeded north-westwards through Kurdistan, expecting to reach home next January.

INEBRIETY AND INSANITY IN THE EAST.

THIS was the theme of a paper by Professor E. P. Thwing, M.D., well-known here in Japan, read on Nov. 7th, before the National Society, at Hartford, Conn., for the Study of Inebriety. He first suggested certain physical, psychic, climatic, political, and religious conditions that might naturally be regarded as repressive of growth in these maladies, and then gave his own observations and statistics of the subject. Dr. Thwing is awakening a wide interest in the United States and England in reference to the Canton Asylum, and hopes to go to London next year in its interests. His work is wholly voluntary, and at his own expense, no paid agents being employed by the Committee at Canton.

LAND HELD BY FOREIGNERS IN THE SETTLEMENTS.

THE first utterance of the newly established journal, the *Kokkai*, on the subject of Japan's foreign relations, is peculiar. "The land held by foreigners," it says, "in Yokohama and Kobe has been leased to them in perpetuity and they have treated it as their own property. A selling to B, and B to C at the rates ruling in the market at the times of transfer. Call it leased land as much as we please, the right of possession is with foreigners for all practical purposes, and cannot be disturbed even though the Treaties are revised. The only possible plan is to buy it back from its present holders at its market value."

THE EMPEROR'S REPLY TO THE TWO HOUSES.

THE Emperor acknowledged, in the following brief manner, the replies made to His Majesty's Speech from the Throne by the two Houses of the Diet:—"We recognise the deep respect shown by the House of Peers." The words "House of Peers" were replaced by "House of Representatives" in the answer to the lower Chamber.

THE EXHIBITION OF OIL PAINTINGS AT UYENO.

WE desire to call the attention of our readers to the Exhibition of Oil Paintings now open in the former *Kazoku Kaikan*, Uyeno Park. All the contributors have by this time sent in their work, and the exhibition will well repay a visit.

THE MASTER OF NAPIER.

THE Hon. the Master of Napier, Secretary of H.B.M.'s Legation, accompanied by Mrs. Napier, departed on Thursday by the *Oceanic* for Hongkong, en route to Europe.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The opening of the Diet on the 29th ultimo has elicited from the whole press of Japan loud expressions of joy and gratitude to the Emperor, who has ever since his accession to the throne been so solicitous to promote the happiness of his subjects as to establish of his own accord a system of constitutional Government. It is needless to reproduce in detail what the vernacular papers say on this subject; a few

specimens will be sufficient for our purpose. The *Hochi Shimbun* observes that, while there are some States even in Europe which do not yet possess a constitution, and while none of the continental Asiatic nations enjoy the benefits of a representative form of Government, Japan has been able to put in practice a constitutional system without any of the unlucky friction between rulers and ruled that has attended its introduction in almost every other country. "Is not this," says our contemporary, "a circumstance of which we may well be proud before all the countries of the world? We are glad that it has been our lot to be born in time to witness a happy union between a wise and enlightened Sovereign and an industrious and self-helping people." Further on it says:—"To-day is memorable for the fact that we have been able to enjoy for the first time in the history of the nation a share in the government of the country. It is memorable for the fact that we have been able to receive the light of constitutional government before every other nation in the Orient. It is memorable for the fact that we have been able to demonstrate that the parliamentary system is not indigeneous to Europe and America alone, and that it can be introduced without shedding a drop of blood."

The *Nichi Nichi Shimbun* is especially grateful to the Emperor for his benevolent intention of governing his people according to a constitutional method. After enumerating the different measures introduced by His Majesty preparatory to the final establishment of Parliamentary Government—from the famous edict of the first year of his reign down to the promulgation of the Constitution—our contemporary remarks that the Japanese nation cannot be too grateful to a Sovereign who has been so devotedly solicitous of increasing the happiness of his subjects.

The *Fuyu Shimbun* alone strikes a different note. The unrestrained rejoicings with which constitutional government has been inaugurated—says the Radical organ—cannot but by contrast recall the memories of the sad history of liberal movements in former days. At present the liberal cause is very popular in the country, but a little more than a dozen years ago its votaries had to bear the opprobrium of the people, and to be hunted down by the Government as if they were traitors against the country. The unfortunate affairs of Kabasan, of Fukushima, of Shizuoka, and of Nagoya are, according to our contemporary, to be regarded as explosions of the long suppressed aspirations for freedom. In conclusion, the radical organ remarks:—"The *Fuyu Shimbun* of former times uttered notes of sadness in response to the troublous state of society. The *Fuyu Shimbun* of to-day utters notes of gladness and sings the triumph of liberty, and we hope that it may not become necessary to change the notes of gladness in those to sadness."

The Emperor's speech at the opening of the Diet is commented upon by the papers in terms of high praise. The *Fomuri Shimbun's* article is perhaps the most interesting of all on the subject. Our contemporary remarks that the speech resembles very much a similar one delivered by the Queen of England on opening her Parliament; and this resemblance is taken by the Tokyo journal as a conspicuous sign of the smooth working of the constitutional system in Japan. Our contemporary is also very glad that His Majesty used the word *kei* (卿) in addressing the members of the Diet. Hitherto the term 卿 has been usually employed by the Emperor when he saluted his Ministers of State and other persons of high standing, as for instance the Representatives of other Sovereigns. In all former Imperial Rescripts on the subject of the establishment of a parliamentary form of government, the characters 汝 or 爾 (*nanji*) were used in addressing the people. These words imply an amount of degradation which cannot be adequately conveyed by any English term. The use of the word *kei* in addressing

the people's representatives is therefore regarded as a mark of signal respect to the persons thus addressed. Our contemporary then explains the full meaning of the various phrases of the speech, and hopes in conclusion that the members of both Houses of the Diet will do their utmost to justify the high expectations entertained of them by the Emperor.

The light-hearted conduct of certain members of the House of Representatives at the sittings thus far held, has called forth the well merited censure of the leading metropolitan papers. The *Nippon* rebukes in strong language those who cast facetious votes at the time of the election of candidates to the Presidency and Vice-Presidency of the House. Our contemporary also describes as defilers of the sacredness of the Diet those members who, forgetting the grave responsibility of their position, only try to cause laughter by saying witty things at the expense of other people, and those who are so vain-glorious as to waste much valuable time of the House by making speeches merely for the love of notoriety. The *Hochi Shimbun* regrets that some of the members of the House of Representatives seem to regard the Diet as if it were a country play-house for the delivery of irresponsible speeches. Such members are, it seems, unable to realize the gravity of the responsibility now devolving upon them. The presence of these foolish members has given to the meetings of the House of Representatives an aspect of confusion and flippancy hardly compatible with the dignity of the House. Happily, as yet members of this class have not had much opportunity to indulge in their folly; but whenever they waste the precious time of the Diet by giving utterance to their usual irresponsible opinions, our contemporary will not fail to condemn them without any forbearance. Most of the other papers write in a similar strain.

The time being near at hand when the Diet shall be called upon to discuss those burning questions which have been engaging the attentions of parties for the last ten years, the vernacular papers show an increasing disposition to consider the present situation in the political world and to offer advice to the various political parties and members of the Diet. The *Choya Shimbun* has on this subject an interesting article which is not concluded, and never will be, for it was evidently the last article written by the former editor, Mr. Ozaki Yukio. Mr. Ozaki and others handed over the editorial department to the new editor, Mr. Watanabe Osamu, in the afternoon of the day on which the article in question appeared. The negotiations for the purchase of that paper had been going on some time, but the actual transfer of proprietorship seems to have been effected quite unexpectedly, at least much sooner than those on the staff had been led to expect. Be this as it may, we very much regret that there is little hope of the article being concluded, for judging from what has already appeared, we might expect an extremely interesting exposition of the ideas entertained by an influential section of the Opposition on the relative positions of those in power and those out of it. The opening of the Diet, said our contemporary, may be regarded as the declaration of the long expected war between the Government and the Opposition. Which side will be victorious, the *Choya* does not pretend to foretell. But it states that "we, the opposition, ought, before opening fire, to try to make sure of the position of the enemy and shape our movements accordingly." The result of our contemporary's observation of the strength of its enemies, is not at all favourable to the latter. The pursuance of the so-called principle of keeping aloof from political parties (*Seito-igai choson-shugi*) on the part of Count Yamagata has been, in the opinion of the Tokyo paper, very injurious to the maintenance of unity among the members of his Cabinet. The Count might have imagined—the *Choya* goes on—that the formation of a Government party would lead to the rise of a reactionary party opposed to it, and that

the absence of such Government party would cause the opposition to divide within itself. There is, says the *Choya*, much truth in this argument, but this policy has not only been unsuccessful in the immediate object of causing dissension in the ranks of the opposition, but it has led to the destruction of all effective combination among the members of the Cabinet. The Premier himself is indeed sincerely convinced of the wisdom of the policy pursued by him; but his colleagues are all persuaded that such a policy cannot be followed under a constitutional system of Government, and each has a party following of his own. "As long"—such is the language used by the *Choya*—"as things go on smoothly, they will assist Count Yamagata and defend the present Cabinet, but as soon as it becomes their interest not to keep on with their chief, they will unite with the parties out of power and turn their bayonets on their old associates." Count Yamagata, however, is not to blame for such a state of things. He is rather to be pitied, continues the *Choya*, for the Government has now been suffering from the same malady for more than ten years. No wonder, then, that, with all his honest endeavours, Count Yamagata has been unable to form a Cabinet which will stand or fall with him. Under these circumstances, our contemporary thinks that the Cabinet will be no match for the united attacks of the Opposition.

The *Koko Shimbun*, under the heading "The Great Wrestling Match of 1890," compares the coming—if it ever comes—struggle between the Government and the Opposition to a wrestling match between two champions. The event of a wrestling combat very often depends upon the amount of sympathy (*hiiki*) manifested by the spectators for the parties engaged. In the same way, the result of the present year's political combat largely depends upon the amount of support given by the people to the respective combatants. Our contemporary does not say to which side such support should be given, but it is taken for granted that the people are to go with the Opposition. In another article, the *Koko* writes on the importance of the combination of the various parties in the Diet against the Government.

Another organ of the Constitutional Liberal party, the *Jiyu Shimbun*, writes in the same strain. Under the heading "Unity in Movement of Parties out of Power," our contemporary strongly advocates the alliance of the *Rikken Jiyu-to*, the *Taisei-kai*, and the *Kaishin-to*, on the several important questions involved in the discussion of the Budget. Thus far these parties have acted in concert, and they have each obtained a due share in the honour of supplying officers of the House of Representatives, the *Rikken Jiyu-to* having obtained the position of President for Mr. Nakajima, the *Taisei-kai* that of Vice-President for Mr. Tsuda, and the *Kaishin-to* that of Chairman of the Committee of the whole House for Mr. Shimada. They have thus, says the *Jiyu*, little to complain of each other. The 67th article of the Constitution, continues our contemporary, is the fortification behind which the Government proposes to defend itself. None of the parties are able single handed to storm this fortification, so they are advised to form an alliance against their common antagonists.

The *Tokyo Shimpō* writes in a different strain. Alluding to the circumstance that among a certain section of politicians the terms "strong Diet" and "weak Diet" are habitually used in the sense that the diet is strong or weak against the Government, our contemporary takes pains to point out the erroneous notions underlying the use of these expressions in such a sense. It is a grievous mistake, says the Tokyo journal, to suppose that the Diet is strong when it turns its brave front to those in power. It may in such a case be strong so far as its relations towards the Executive are concerned, but it may at the same time be weak in its attitude to the mass to the ignorant people, to the *soshi* and so forth. Such a Diet, whatever its attitude towards

the Government may be, can not be said to be strong. A really strong Diet, continues the *Tokyo Shimpō*, is that which courageously discharges its proper functions as defined by the Constitution and preserves its independence alike from the Executive and from the ignorant mass.

The *Mainichi Shimbun* continues its articles on the subject of the military and naval defences of the country. Speaking of the Army, our contemporary observes that much still remains to be done in the supply of arms and ammunition against a war with a foreign country, in the strength of the forces specially detailed for the defences of the outlying islands, and of the artillery for the defence of important strategic points, in the adaptation of the railway system for strategic purposes, and in the number of officers. As to the Navy, our contemporary dwells on its importance both in time of peace and in time of war. The present Navy is not sufficient to give proper protection to the commerce and nationals of Japan in China, Korea, Hawaii, and so forth. The utter insufficiency of the maritime defences in time of war goes without saying. In discussing these topics, our contemporary quotes elaborate statistical tables, and in general shows much research, but its essay is too long to be fully reproduced in this weekly summary.

The *Hochi Shimbun*, in a series of two long articles, draws the attention of Japanese manufacturers and merchants to the importance of utilizing the unique opportunity afforded by the International Exposition at Chicago in 1893, to open up new markets for Japanese products and manufactures. Our contemporary alludes to the importance of the trans-Pacific Republic to Japan from a commercial point of view, and recommends its countrymen to pay attention to the development of the trade between the two countries. There may be some people, says the *Hochi*, who, seeing that Mr. Goward, who is now staying in Tokyo on behalf of the Exhibition in question, pays much attention to art objects, may entertain an erroneous notion that ordinary articles, besides those relating to art, are not in demand in America. There are many articles of practical utility manufactured in Japan—continues the *Hochi*—which are not yet known in America, but which, if properly introduced there, will be sold in large quantities. Hitherto, Japanese manufactures and merchants have relied too much upon the few handfuls of foreign merchants in the settlements; the Tokyo journal advises them to study for themselves the taste and condition of foreign markets.

The *Jiji Shimpō*, writing on the same subject advises intending exhibitors to form an association and send a proper delegate to whom they may entrust their goods. Hitherto the Government has appointed a private firm or individual, to represent the Japanese exhibitors and to take charge of the exhibits, but this system has not worked satisfactorily; so that our contemporary thinks it better both for the Government and the exhibitors to let the latter manage their own affairs, giving due and proper protection in matters of transportation and so forth.

The *Nippon* has devoted several articles to the discussion of the 67th article of the Constitution. The *Jiji Shimpō* discusses at great length the question of the reduction of taxes. The *Choya Shimbun* has a very sensible article on the regrettable occurrence at the Russian Legation at the time of the opening of the Diet. It rebukes, on the one hand those youths who, in their resentment, offered violence to the party within the Legation, while, on the other, it calls the attention of foreign residents to the fact that some regard must be had to national ideas of propriety in matters of etiquette on important occasions. The same journal also has published several articles on the question of whether the Budget is a Law or not.

THE OPENING OF THE DIET.

THE official opening of the Diet took place on the 29th ultimo. There had apparently been some doubt as to the possibility of holding it on that day, and it was considered necessary that not only the election and nomination of the President and Vice-President of the Lower House, but also all arrangements relating to the organization of the Diet should be completed before the official ceremony. By the afternoon of the 27th, however, a definite prospect of putting everything into due order was discerned, and an extra of the *Official Gazette*, issued that evening, announced that His Majesty the EMPEROR would visit the Diet on the 29th, and deliver the first Imperial Message ever addressed by a Japanese Sovereign to a Constitutional Assembly. Various intimations had already been given as to the routine of the ceremony, and the persons who should have the honour of being present, so that the final announcement was of the briefest possible kind, not even containing any statement of the hour fixed for the great event. The latter point did not long remain in doubt. Before night the whole capital knew that the Imperial cortège would set out from the Palace at half-past ten in the forenoon, and the knowledge drew thousands in the streets from an early hour on the appointed day. The situation of the Diet offers exceptional facilities for purposes of isolation. Bounded on the south by one of the moats, on the north by the Hibiya Parade Ground, on the east and west by streets which debouch at one end on bridges crossing the moat, at the other on the Parade Ground, access from every direction can easily be cut off. Full advantage was taken of this on the 29th: Police notices appeared even before the day had been fixed, informing the public that traffic would be entirely suspended within the quarter where the Diet stands, from eight o'clock in the morning until the conclusion of the ceremony, and large forces of constables were stationed at various points to prevent intrusion. No crowd is so easy to control as a Japanese. Moreover, the only directions from which attempts to encroach were likely to be made could be foreseen. Had the Hibiya Parade-ground been accessible, it would doubtless have become the rendezvous for half the citizens of the capital, who from its spacious area might have watched the procession throughout the greater part of the route. But it was rigorously closed, and with the exception of one or two enterprising lads who contrived to climb to the top of some scaffolding and obtain a momentary view of the street before they were descried and summarily dislodged by the police, the immense rectangle occupied by the Parade Ground remained to the end without trespassers. The three directions from which

a distant but commanding view might be obtained were the streets leading from the elevated districts of Nagatacho and Kojimachi. In these streets great masses of people assembled, and during a brief interval the police were obliged to make a demonstrative exercise of authority in order to establish the fact that no spectator might pass a line drawn twenty yards from the points where the streets join the main route leading to the Palace. Once convinced of the reality of this veto, the crowds resigned themselves placidly to the situation, aggregating in denser and denser masses at the limits of the police cordon as the morning wore on, but preserving always the quiet good humour and mutual courtesy seldom absent in any congregation of Japanese. The streams of regular traffic which usually flow towards Shibashi and Kyobashi by the Hibiya routes being thus diverted, all the approaches to the Diet from the direction of the official quarter of the capital remained entirely unobstructed by vehicles of every description until nine o'clock, when the equipages of officers connected with the ceremony began to pass in considerable numbers. An interval of comparative quiet then ensued, but presently large bodies of troops, marching to the music of bugles, began to debouch upon Shibiya from various quarters. About five thousand men, in brigades from five to six hundred strong, were under arms. Preserving the order of march, four deep, they were marshalled so as form a solid fringe bordering the whole route of HIS MAJESTY'S return to the Palace. The route had, of course, been publicly announced beforehand. Emerging from the main gate of the Palace, the Imperial cortège was to turn to the right, and crossing the moat by the Sakurada Gate, was to pass before the Foreign Office and finally enter the enclosure of the Diet by the gate of the House of Peers. Returning, it was to issue from the gate of the House of Representatives, and thence proceeding by Uchisaiwai-cho, the westerly face of the Rokumeikan, the Hibiya Gate, and Yuraku-cho, was to pass by the Babasaki-mon to the outskirts of the Palace and re-enter by the Old Castle Gate. Half-past ten was the hour named for the departure of the cortège from the Palace, and by ten o'clock those privileged to be present at the ceremony were expected to take their places. Briefly speaking, these fortunate persons were officials of and above *Chokunin* rank, and wearers of Third Class or higher Japanese Orders, together with a very limited number of *Sonin* officials. The category included a few foreigners, but owing to the restricted space available the invitation list had to be reduced to the smallest possible dimensions. Only ten representatives of the Japanese press were present, and writers for the foreign press did not amount to more than half of that number. From half-past nine the wisdom of the police

arrangements became very apparent, for the stream of vehicles carrying the possessors of invitations became so thick that had the usual traffic been super-added great confusion must have ensued. Order was perfectly preserved, however, and as each carriage or *jirikisha* deposited its occupants, constables or gendarmes led it to its appointed place and took care that it remained there. Very soon this current of equipages ceased, and the whole route remained in possession of the mounted police and of a line of constables stationed at regular intervals throughout. The EMPEROR, generally punctual, did not keep his faithful and curious subjects waiting long. Precisely at half-past ten the advanced guard of the cortège was called to attention and HIS MAJESTY took his seat in the State carriage. But as the procession moved at a slow foot pace, it did not enter the gates of the Diet until eleven o'clock. After the outriders and advanced guard, came three carriages in which were seated the Princes of the Blood who are of sufficient age to be qualified for membership of the House of Peers. Then followed a troop of lancers, and then the State Coach. Drawn by six handsomely caparisoned horses, their riders resplendent in gold lace, the appearance of the glittering equipage surmounted by its gilded phoenix, elicited bursts of cheering from the crowds packed in each of the streets debouching on the line of progress. But a Japanese crowd has not yet learned how to cheer in the open-lunged, vociferous fashion of Anglo-Saxon and Teutonic gatherings. There is still a certain hesitation to admit the politeness of this noisy foreign method, and still a little doubt as to whether the ears of the Sacred Sovereign should be assailed by the din of a clamorous mob. It must be confessed, too, that the Sovereign himself does not greatly encourage noisy or demonstrative greetings. HIS MAJESTY preserves much of the stately frigidity of Japan's old-time etiquette, and never seems an entirely fitting cynosure of public gaze or vulgar greeting. Partly uncertain, therefore, and partly awed, the populace limited its cheers and suffered the cortège to pass in a manner which to foreign observers seemed somewhat cold. In the State Coach, facing the EMPEROR, rode Marquis TOKUDAIJI, the Lord High Chamberlain, and after it came another body of cavalry preceding the carriages of the Minister President of State, the Lord Keeper of the Privy Seal, the President of the Privy Council and the Ministers of State, a strong body of lancers completing the cortège. At one minute past eleven HIS MAJESTY alighted within the enclosure of the Diet. He was received by the Presidents, Vice-Presidents, Chief Secretaries, and Secretaries of the two Houses, as well as by the members, and through the ranks of these future legislators he passed, escorted by Count ITO, President

of the Upper House, to the Imperial Waiting Room, where an interval of fourteen minutes rest was taken to allow the members to marshal themselves in their places within the Chamber.

Meanwhile, inside the Parliament buildings there had by this time been gathered a great concourse of the notables of all degrees who were privileged to take part in or to witness the coming spectacle. By ten o'clock the commodious gallery surrounding three sides of the Chamber of the Upper House, where the ceremony of the day was to take place, was fairly though not greatly crowded with spectators, excepting only the Imperial box, and these next to it reserved for the Diplomatic Corps, which were not yet occupied. Of the four hundred or so of visitors thus collected, nearly all wore naval, military or civil uniforms, the dark-blue of which, with its more or less rich ornamentation of gold, had an effect fine in itself and well set-off by the quiet, subdued tints of the walls, woodwork, and draperies of the Chamber. The arrangements for the reception and distribution of the visitors left nothing to be desired. From the moment of arrival each person was guided, without fuss or confusion, to his appointed position in the gallery, where the ranks of the groups of occupants of the several boxes were indicated by their distance, right or left, from the central Imperial compartment. Thus, there was one box, next to Royalty, for first-class *chokunin*; another, beyond, for Prefects; others for ex-Senators; another for second-class *chokunin*, and so on, the juniors being at the extremities of the side galleries. Of foreigners there were about twenty, those, namely, in Japanese employ, ranking, and placed, with second-class *chokunin*, and holding third-class decorations, and five or six representatives of the press. Below, the body of the House was empty. From the podium at the head of the Chamber, directly facing the Imperial box, the Presidential table had been removed, and at the back beneath the now raised curtains of the alcove provided for State occasions, was seen the throne from which the EMPEROR was soon to address the whole Diet. Some of the outer rows of the members' seats had also been removed, to provide standing room for the double assembly.

A few minutes before eleven, at the sound of trumpets without, heralding the EMPEROR'S approach, there was an instant hush of expectation. At the stroke of eleven the members of the Upper House, ushered by the Chief Secretary, began to file in slowly to their allotted places in the right-hand half of the concentric semicircles of seats facing the alcove. The Peers comprised three classes—hereditary, who wore the rich robes of their orders; those appointed from official life, who wore the uniform of their respective ranks; and those nominated from among the highest

tax-payers, who were in evening dress. With them came the President, Count ITO, in full uniform, and wearing the wide crimson sash of the Grand Cross of the Pawlownia. He took his stand in front of his fellow members immediately below the balustrade of the podium. A few minutes later, the Upper House having all entered, the members of the House of Representatives flocked in from the opposite quarter, and massed themselves in the left-hand quadrant. There was more hurry and excitement in the movements of this half of the Legislature; and it was not a little interesting to find here, in this very first gathering together of Japan's first Diet, the same contrast between the eagerness of the Commons and the dignity and leisurely ease of the Lords that has been characteristic of such assemblies elsewhere since dual Parliaments began. Nor was this the only contrast on the present occasion. For, while the Commons were in sober evening dress, with the exception of two modest uniforms, the Lords, right abreast of them, were, as we have said, richly uniformed, with a sprinkling only of black coats. To the gravity under brilliant apparel in one half of the Chamber was juxtaposed a livelier demeanour under sombre garb in the other half. Next came the Diplomatic body filling the boxes reserved for them in the gallery. After them, the Cabinet and other dignitaries of Ministerial rank, headed by Count YAMAGATA, the Minister President of State. These entered from the right of the podium, and grouped themselves thereon at that side of the throne. Every one was now standing, and the whole assemblage remained wonderfully silent and still. At exactly a quarter past eleven, as the cannon began to salute and loud cheering was heard from without, the EMPEROR, preceded by the Chamberlains and high functionaries bearing the Imperial Regalia, and attended by the Imperial Princes and the Court, came in slowly and with great state from the left of the podium. Every head was bowed in homage, to which the Sovereign responded as he turned to take his stand before the throne. The Minister President of State, Count YAMAGATA, now advancing and making obeisance, handed to the EMPEROR a scroll, from which HIS MAJESTY read in dignified tones, and in a voice that was well heard throughout the whole Chamber, the following speech to the assembled Diet:—

We announce to the Members of the House of Peers and to those of the House of Representatives: That all institutions relating to internal administration, established during the period of twenty years since Our accession to the Throne, have been brought to a state approaching completeness and regular arrangement. By the efficacy of the virtues of Our Ancestors, and in concert with yourselves, we hope to continue and extend those measures, to reap good fruits from the working of the Constitution, and thereby to manifest, both at home and abroad, the glory of Our country and the loyal and enterprising character of Our people.

We have always cherished a resolve to maintain

friendly relations with other countries, to develop commerce, and to extend the prestige of Our land. Happily Our relations with all the Treaty Powers are on a footing of constantly growing amity and intimacy.

In order to preserve tranquillity at home and security from abroad, it is essential that the completion of Our naval and military defences should be made an object of gradual attainment.

We shall direct Our Ministers of State to submit to the Diet the Budget for the twenty-fourth year of Meiji, and certain projects of laws. We expect that you will deliberate and advise upon them with impartiality and discretion, and We trust that you will establish such precedents as may serve for future guidance.

The speech from the Throne finished, the President of the Upper House, Count ITO advanced, received the scroll from the EMPEROR made obeisance, and withdrew. The whole affair occupied just five minutes. Sovereign, Court, and Cabinet immediately left the Chamber, the rest of the audience remaining a few minutes, till the strains of the National Anthem, played outside, told of HIS MAJESTY'S departure for the Palace. Brief though it naturally was, the ceremonial was, nevertheless, dignified and impressive in a high degree. In every respect—in arrangement, execution and accessories—it was undoubtedly a thorough success, and worthy of the occasion of one of the weightiest episodes in Japan's modern history. The EMPEROR—who, we have omitted to say, wore a military uniform—looked, happily, in excellent health, and discharged his high functions, as HIS MAJESTY always does, with true kingly dignity and ease.

THE FRACAS ON THE 29th ULTIMO.

WE are glad to see that the *Japan Gazette* protests strongly and ably against the unjust and ill-natured language used by a local English contemporary with reference to the stone-throwing at the Russian Legation on the 29th ultimo, and points out how grossly unfair it is to apply opprobrious epithets to the whole Japanese nation because a few youthful roughs behaved improperly. Experience shows that anything like discussion has the inevitable result of raising such matters from their intrinsically trivial position to a place of public importance. At the same time, nothing could be more mischievous than to suffer the Japanese people to imagine that such writing as that of the *Japan Herald* receives the faintest endorsement from thoughtful foreigners. It is little short of a public calamity that there should be published in this Settlement a journal the unvarying rôle of which is to put the worst possible construction on everything done by the Japanese, to misinterpret their motives, to exaggerate and gloat over every fault that can be laid to their charge, and to display towards them an unchanging spirit of contempt and dislike. We do not overshoot the mark when we say that such is the part played by the *Japan Herald*, and the *Gazette* does good service when it protests against the unwarrantable infer-

ences, gross perversions and malevolent denunciations uttered by its local contemporary. If the Japanese people conclude that the feelings of foreigners towards them are reflected in the columns of the *Japan Herald*—and could they be greatly blamed for so concluding?—they, in their turn, must come to regard us with feelings of bitter resentment, if not of active hatred. But nothing could be farther from the truth than to imagine that Europeans or Americans in this Settlement share the envenomed mood of the *Japan Herald*. There are, indeed, differences of opinion, more or less pronounced, about the procedure which should be followed in abolishing Consular Jurisdiction, and these differences have engendered some bitterness, but the most obstinate supporters of a conservative policy are, as a rule, disposed to be just towards the Japanese, and to treat them in a friendly manner. There is no manner of sympathy with the sneering, rancorous tone of the *Japan Herald*. Under whatever jurisdiction we may be, it is not to our interest, still less does it accord with our better nature, to be constantly paraded before the Japanese as acrimonious, surly critics, anxious to put the worst construction upon everything they do, and insolently indifferent about the sentiments of unbrage which such displays of spiteful ill-will must necessarily beget in their breasts. There has been much talk among foreigners about this affair at the Russian Legation. Of course all agree that whatever may be the still surviving strength of the old-time code of Japanese etiquette which forbids the act of looking down on an Imperial procession from an artificial eminence, a protest in the form of a volley of stones is not justifiable. But apart from this, the general sentiment is one of regretful anticipation that such occurrences are certain to be misconstrued abroad to the serious injury of Japan's fair fame. No person with any claim to moderation or common sense imagines that because a party of hot-headed students violently resent what they regard as an insult to their SOVEREIGN, the whole nation must be called uncivilized, or the Authorities pronounced incompetent to preserve order. Even the foreigners who were the victims of the assault speak of it as a paltry affair, and justly regard it as a youthful ebullition which might occur in any city in the West under similar circumstances. Assuredly if any one, foreigner or native, were to remain covered when the QUEEN passes along the streets of London, he would receive a very rough reminder of the courtesy which Britishers expect to be shown to their Monarch. It is worth while to quote here the words used by a Japanese of position and high education, in an English letter which has been shown to us:—"It appears that a number of Japanese in the service of the Legation had been viewing the

Imperial cortège from the roof of a stable or the wall of some out-houses of the premises, while a party of foreign ladies and gentlemen took their position in a raised pavilion at the corner. Now I need not tell you that it is an inexcusable breach of etiquette in Japan to look down on the EMPEROR while he is passing along, much more to look at him over a wall or from roofs. I think that the wrath of the students was primarily directed against their own nationals, who manifested such a signal lack of respect towards their EMPEROR, and that the foreigners were not the real object of resentment. In the case of Europeans and Americans, the Japanese are willing to make allowance for differences of custom in matters of etiquette. Had the Japanese in the service of the Legation been guilty of such imprudence anywhere else, the probability is that they would have fared worse. I do not in the least excuse the youths who threw stones, but I think that the affair is not in any degree to be construed as a demonstration of animosity either to Russians in particular or to foreigners in general." From what we have been able to gather, this letter very accurately represents the view taken by the better classes of Japanese. And on the foreign side, there is certainly no disposition to exaggerate the incident, or to pervert it into a basis of harsh accusation against the Japanese nation generally. It is, we repeat, most regrettable that an English newspaper published in this Settlement should devote itself to creating the utterly false impression that deep-seated dislike and contempt are the feelings animating the foreign residents towards the Japanese. A grosser libel could scarcely be uttered. How much the popularity of Englishmen in Japan has suffered by these unceasing displays of rancour and enmity, we should be afraid to speculate, but that it has suffered very materially there cannot be the smallest doubt. A newspaper cannot go on, year after year, telling the Japanese, almost in so many words, that its nationals dislike and despise them, and are ready to take the most uncharitable view of all their actions, without obtaining some credit and begetting some resentment on the other side.

YOKOHAMA HARBOUR WORKS.

ON Tuesday the trial took place of a new dredger, the *Ayame*, designed for use in connection with the Yokohama Harbour Works. The contract for the dredger was secured by the Naigai Yotatsu Kaisha, and resulted in the launching some months ago from the yard of Messrs. SIMONS and SONS, Renfrew, of the *Ayame*. She is an iron dredger, on the bucket ladder principle, and has hopper capacity for her own dredgings of 400 tons, though of course where that process is preferable she may discharge on both sides into barges.

Working at an average depth of 33 feet, —but practicable also to 40 feet of water, as well as at a shallower depth than the figures first mentioned—she was designed to dredge 350 tons of ordinary mud per hour, and to cut her own flotation in very shallow water. Her engines are on the triple expansion principle, and her dimensions are:—length 145 feet over all, beam 28 feet, depth 12½ feet. She is provided with all the latest appliances to expedite and facilitate the work in which she is to be engaged, has winches forward and aft by which her movements while dredging may be regulated—the vessel usually lying with six anchors out, by means of which she can be moved to and fro over the dredging ground.

The *Ayame* was brought out to Japan under the command of Capt. RUHE, and had a most tempestuous voyage between Singapore and Yokohama, having encountered a typhoon which tried her seaworthy qualities in the highest degree. Though her buckets and the ladder on which they move were duly stowed, and the well closed up by a false stem and false bottom, enough of her dredging works still remained above the deck to render her exceedingly top-heavy, but the manner in which she behaved under most trying circumstances sufficed to show that, properly handled, such a craft need apprehend few dangers from which seagoing ships are ensured.

The trial on Tuesday was witnessed by H.E. Governor ASADA, and among others on board were Major-General PALMER, Superintending Engineer of the Harbour Works; Mr. F. WALKINSHAW, Inspector of Machinery for the Harbour Works; Mr. OKURA and Mr. KIRBY (of the Naigai Yotatsu Kaisha), and Messrs. TSUCHIDA and MITA, engineers of the Harbour Works. The *Ayame* was first moored in an easterly and westerly direction near the P. and O. buoy, where her hoppers were half filled at the rate of about 520 tons per hour, after which she changed position slightly and, lying N.N.E. and S.S.W., filled her hoppers to the hatches, the greater part of the work being performed at the rate of nearly 550 tons per hour. With her hoppers overflowing, the dredger now proceeded to sea and ran a couple of trips between the green lightship and the Homnoku Lightship, attaining a mean of between 5 and 6 knots, the engines working very smoothly. A special feature of the trial was the ease with which the ship was steered: she answered her helm with wonderful celerity, and was yet easily guided on her course while running the distance between the lightships. Finally, in a depth of some 36 feet, outside the harbour limits, her load of dredgings was released by means of six pairs of shutters, and she returned to her anchorage.

Altogether the vessel may be said to have amply fulfilled expectations, her dredging parts working so well as to fully justify the praises awarded to Mr. BOYLE, the

engineer who had charge of her engines during the voyage out, and who put her in order for working purposes here. Running at the rate of 136 to 142 revolutions per minute, her engines, which are designed to work to an indicated horse-power of 300, moved with very little vibration; the operation of the bucket ladder proved that the ship could fill her hoppers in much less than an hour, worked with ordinary skill, and her handiness while under steam was most marked. In respect of dredging power and capacity she manifestly exceeds the limits stipulated for in the contract, and the various means by which her engines may be utilised for raising and lowering the bucket ladder, for working the various mooring chains, driving the bucket machinery, &c., prove her to be a most valuable craft.

The main purpose of the dredger is, of course, the gradual deepening of the shallower parts of the anchorage, an operation likely to take some years. It is understood that this deepening will be from the 26 feet line—*i.e.*, the contour of the seabottom which corresponds with a depth of 26 feet of water at low-water of spring tides—and will be extended in towards the shore so as to add from about one to four or five feet to the present depths over an anchoring ground of nearly a square mile. For this purpose, approximately 3,000,000 cubic yards of mud will have to be removed. As to the rest of the works, they appear to be making solid and satisfactory progress, a few particulars of which have been kindly given to us on enquiry at the office. Of the whole 12,080 feet representing the length at water-level of the two breakwaters, about 7,730 feet will be on a firm foundation, the remainder, *i.e.*, the deeper parts, being founded on mud of varying consistency and depth. The concrete-bag work in the substructure of the former, much of which is already done, is being laid at the rate of about 175 tons per working day, and is expected to be finished by the end of April, after which the building of the concrete superstructure will be begun. We may expect, therefore, to see the breakwaters beginning to rise above the water, from their inshore ends, in the early part of next summer, and it is anticipated that the whole of these 7,730 feet will be finished in about 2½ years. For the breakwaters on soft bottom, the mound substructures and accessory operations are fast going ahead. Some 40,000 tons of material have been already deposited, and at present the dumping of *dotan* (hard tuff) and sand is progressing at the rate of about 800 tons per working day. If, as is expected, this part be finished and got ready for the superstructure in 15 or 16 months, the whole work should be completed for all practical purposes by the autumn of 1893, which was the engineer's original anticipation. During the last month or two the area of operations generally has been a

good deal expanded, and the rate of progress accelerated. After the granting of the first appropriation for the harbour-works, 15 months ago, some time was necessarily taken up in preparations, and in the procuring of apparatus and floating craft. Then, the work being of a kind new to this country, it was necessary to proceed circumspectly and on a moderate scale, while training a nucleus of workmen and staff. This having been accomplished, it became possible a little while ago to expand the operations and distribute the trained hands, by that time expert and quick at their work, and consequently a good show of various craft and working parties, divers, &c., is now to be seen, scattered along the lines of the breakwaters, on days when the weather allows of the operations being carried on. The works for the long iron pier, which is to be built out from the Western Hatoba on screw-piles, will be begun in the spring. It was necessary, before proceeding actively with this undertaking, to make experiments on the bearing power of the mud with a small consignment of piles and screws, &c. For this purpose a spot was picked out where the mud is abnormally deep and soft. The experiments were finished two or three weeks ago, and the results are rather more satisfactory than had been expected. Lastly, the training-works by which the silt-laden water of the Katabiragawa, hitherto the harbour's chief enemy, are to be excluded from the anchorage and guided to sea behind the inner end of the North Breakwater, will also be begun next year.

A CHARITY BALL IN TOKYO.

A new project has been started in Tokyo, namely, to hold a ball in aid of the funds of the Red Cross Hospital, and of other charity hospitals in the capital. The public will remember that a good deal has already been done to assist the Red Cross Society, but the organization of that Society provides that until a certain amount has been accumulated, all monies coming into the hands of the Committee must be added to the capital fund. One consequence of this system is that there are only ten free beds in the Hospital, and as these happen to be occupied for the most part by chronic cases, the institution is momentarily prevented from extending its aid to the public at large. Indeed, the charitable resources of the capital in this particular sphere are manifestly inadequate. The chief source of medical relief is the Tokyo Charity Hospital at Atago-shita, mainly supported, as we are annually reminded on the occasion of the Rokumeikan Bazaar, by the exertions of the ladies of the capital and of Yokohama. In this hospital there are sixty beds. They are always occupied, and every prospective vacancy is eagerly

waited for. The physicians and surgeons who attend the Hospital give their services absolutely without guerdon of any kind, and the same is true of the nurses, except that the latter receive valuable training and are thus equipped for earning a livelihood afterwards. So strictly economical is the system practised, that these nurses are required to pay for their own food, and their only hope of recouping this outlay lies in occasional opportunities of special employment outside the Hospital. Despite all this care the monthly expenditure reaches a thousand *yen*, and sometimes no little difficulty is experienced in supplying funds. Three years ago her Majesty the EMPRESS set a splendid example by contributing the whole of her personal allowance to the Hospital, and remaining for six months without satisfying the requirements to which this money would otherwise have been devoted. Then there is the Hospital in Hongo, which is connected with the Imperial University. Some sixty beds, if we remember rightly, are there available for charity patients. The Red Cross Hospital adds ten beds; the Hongo Hospital for contagious diseases furnishes about thirty, and the Hongo Yoku-in has, perhaps, as many more. The Hongo Hospital illustrates, probably more than any of the others, the insufficiency of the resources now available. It receives patients of the poorest class, and very frequently when these are discharged, though their diseases have been cured they are totally without means to procure food, and sometimes have not even clothes to protect them from the cold. Obviously the charity dispensed by these various hospitals is quite inadequate to the needs of a great city like Tokyo. The Hongo Hospital especially is compelled to be pitifully chary in its methods, and to assist this institution is a secondary object with the promoters of the Charity Ball scheme. The primary purpose is to equip ten beds in the Red Cross Hospital for the space of one year. To accomplish this a sum of a thousand *yen* is required, and hopes are entertained that even more will be obtained by the means now resorted to, in which case the surplus will be devoted to the aid of the Hongo Hospital. The Committee of the Imperial Hotel have most generously placed the building at the disposal of the Ball Committee gratis, and have undertaken to furnish the supper at cost price. The band also will be given free, and as no decorations are required a great part of the money obtained by the sale of tickets will remain available for charitable ends. We need scarcely remind our readers that Japan, indeed we may say the whole Orient, contains no other ball room comparable with the great salon of the Imperial Hotel. It is a superb chamber, spacious, lofty, beautifully proportioned, handsomely decorated, the arrangements for music quite exceptional, and the floor ideally perfect for dancing.

purposes. The time chosen for the Ball is also very happy, so far as foreigners are concerned. If people are disposed to dance at any time in the year, it should be the night before Christmas eve. Of course it will be remembered that an additional reason for charitable effort is furnished by the distress which the high price of rice has caused among the poor of Tokyo this year. A plentiful harvest is now coming in, but the hardships of the past twelve months have left permanent traces, and for some time to come the demands upon charity-hospital accommodation must be very pressing. So far as Yokohama is concerned, we are persuaded that this project need only be ventilated to receive liberal support.

CORRESPONDENCE.

FESTIVITIES AT NAGOYA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Previous to the completion of the Tokaido railway, about two years ago, Nagoya was but little known to the majority of travellers or residents in Japan; but since the line has been opened, the town has come to be recognized not only as a necessary break in the long journey between the Eastern and Western capitals, but as a halting place to be desired for its castle, its potteries, and by no means least, its semi-foreign hotel. The latter will shortly be wholly eclipsed by one conducted entirely on foreign lines, with table and appointments arranged to suit the requirements of even the most exacting travellers, but as it will, no doubt, be liberally advertised, an enumeration of its promised attractions is unnecessary here. Two years ago, those who did chance to alight on this city of the plains—for Nagoya, or rather Aichi Ken, is decidedly flat, although surrounded by an amphitheatre of hills in the distance—voted it a nice, clean town, but uncommonly dull, and not productive of the necessities of life according to a European point of view; now, however, it has advanced considerably. European visitors are a daily occurrence, while the number of Western residents has increased to over 30, which, taken in connection with the taste for Western commodities rapidly becoming widespread throughout the country, has caused the shops to be very largely modernized and most of them to include goods that amply supply foreign wants. Being a garrison town, Nagoya is of course not quite devoid of "life," still festivities are sufficiently rare to arouse no small interest in the neighbourhood, and the city wears a very pleasing air of importance to-day, for we are *en fête* for three days. This is one of the principal annual festivals, and the only one which can be called exclusively military. It is the soldiers' great holiday. Early this morning they all repaired to a temple specially devoted to garrison services, to worship in memory of departed warriors, after which they plunged heart and soul into the sports of the day. The scene of action is the new parade ground and a portion of the old, part of the latter being fenced in preparatory to the erection of more additions to the already extensive barracks. The garrison, with the castle, occupies one of the pleasantest and most picturesque sites in Aichi. It stands in one corner of the raised plateau on which the town is built, and overlooks a vast plain chiefly of rice fields, broken here and there by scattered farms and toy villages, and intersected by one or two broad but shallow rivers. The horizon is bounded by the hills before alluded to; low ranges and sudden peaks, falling away in gentle slopes, and bush-covered sand hills to the plain. To-day, the weather being ideally lovely, the scene is as fair as any artist could desire. Here and there, where vision is almost merged in cloudland, a dazzling point of white bespeaks some distant height already wrapped in the soft pale of winter, while the tender blue, and warmer purple of nearer ranges throw into strong relief the vivid green, gold, and red of the foliage, just now in the full glory of its autumn radiance. Just admiration of the scenery, however, is, to-day impossible, and a full appreciation of the sublime not to be indulged in, surrounded, as we are, by fun and frolic. Not a vacant spot remains on all the parade ground, save in the circle

marked out by a raised platform screened by mats and divided into small compartments, let out to those who can afford to pay for the privilege of privacy. This circle is the race course, for races and steeplechases, with prizes for the lucky riders, form one of the principal features of the day's programme. Of course the jockeys are all military. In another part of the ground wrestling is going forward, while archery and athletic feats of various kinds occupy a third space, the intervals being fairly packed with peep-shows, refreshment stalls, small bazaars, and the like, while thousands upon thousands pass to and fro in the undemonstrative fashion in which Japanese folk take a holiday, and which makes one wonder whether they are really enjoying themselves. They look happy, though, in spite of their quiet demeanour, and their lack of noise is amply made up for by the shrill whistles, drums, and cries of the various showmen on all sides. Here a sort of theatrical performance is going on, there some conjuring, while a third booth is exhibiting an amusing company of dogs and monkeys dressed in "the height of fashion," and a snowy cockatoo. Countless miniature stoves are busily steaming under sundry delicacies of refreshment which make the air redolent of soy to an extent difficult for European olfactory nerves to appreciate. We are greeted with excited whispers of our name, by small fry, as we pass through the motley crowd of "all sorts and conditions of men," composed very largely of the agricultural classes, to whom the first sight of a foreigner will evidently not be the least important or most easily forgotten event of the day. Although a Japanese crowd is by no means a novelty to us, we again experience a sense of fresh interest as our eyes rest on one country group after another, and take in the details of their original costumes, indicating that personal comfort is their only referee, and that the stereotyped conventionality which enslaves us, is at present a stranger to them. Here a middle aged man is trotting along with *kimono* caught up to the waist by the corners, in the manner peculiar to the farmer element, across his white gaitered legs, while by his side two or three little sunburnt maids in all their bravery of scarlet and blue seem half inclined to loiter, in their wonderment at their surroundings; there, perhaps a young fellow is striding along wrapped in a heavy shawl, though the day is warm, but nearly all have brought wraps of some sort with them, and nearly all carry a handkerchief of provisions, and wear odd-shaped felt hats of varied hues. A goodly stream of sightseers is passing into the Castle, this being the one occasion when, its doors being opened to the public, it forms a very important item in the list of attractions.

Near the Castle gate is a species of bird-cage, elevated on high poles and extensively decorated with greenery, flowers, and flags, in which a party of privates are sitting, with several pyramids of oranges in front of them, which they will shower amongst the crowd later in the day. Fireworks are filling the air with quaint little paper figures, and many coloured balloons, and the soldiery are beginning to mingle with the people and infuse into them a little of their own energetic spirits, as we turn from the gay scene and wend our way homewards. We leave the parade ground by one of several roads cut through a grass mound some 20 or 30 feet high, which was doubtless originally the boundary of the Castle grounds, but now just serves to keep the parade ground a little private and separate it from the town. We emerge from the shade of this pine crowned rampart opposite the new gendarmerie buildings, which are one of the latest and most attractive additions to the town, being white plaster and grey granite houses, relieved by touches of brown woodwork, and surrounded by the rich green of pine trees and numerous shrubs; then away we rattle down the principal business street, to-day gay with fluttering flags and overhung with many a graceful garland of ruby coloured lanterns in honour of Nagoya Garrison Festivities.

Nagoya, November 24th, 1890.

FESTIVITIES IN SENDAI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—That important day in Japanese history, the opening of the Diet on November 29th, was quietly observed in Sendai. The streets presented a holiday appearance with the numerous flags waving on both sides. In the business quarters while the shops were all open for trade the national emblems fluttered as bravely as on any holiday, but they were not so frequently seen before private houses. As a little significant of this great departure in Japanese history the young people were deeply interested. Many of the schools were closed, and in some instances at least, at the

earnest desire of the students. At the normal school some exercises were held in honour of the occasion. Before all the assembled students, the Imperial decree was read, and the usual ceremonial acts were carried out by the schools. Towards the close of the day many of the prominent citizens and of the official class celebrated the event at the Yusuikan, a large restaurant in the city. The proceedings were formal and any one was welcome to attend. His Honour, the Mayor of Sendai, delivered an address. The full-grown birth of representative institutions in the Land of the Rising Sun was heralded with feasting and drinking.

While everything passed off pleasantly and even joyously, there were not any large crowds in the streets. There was earnest feeling as to the importance of the step, but no ostentatious parading. This simplicity of action may be due to the fact that the people of the city had only the week before, on November 23rd, exerted themselves in preparing for the greatest festival they have in their calendar, Shokonsai, the festival in honour of those who died for their country. In the breasts of all the memory of the civil war called up the strongest emotions of patriotism. The merchants shrewdly saw an opportunity for a business venture, and these two sentiments of honouring the occasion and drawing a crowd, contributed to make the town a gala scene for two days. The railways coöperated, fares were reduced, and many visitors came from Ichinoseki, Shiogama, Iwamune, Ogawara, and other points in this part of Japan. The festivities continued for two days, November 22nd and 23rd, and the streets were thronged with people, visitors from neighbouring towns, farmers from the country, soldiers, merchants, students. For several days beforehand nearly all the carpenters were busy putting up scaffolding, booths, arches, *dashi* and other structures necessary for the day. A brass band was brought up from Tokyo, and once it was said the aeronaut, Mr. Spencer, would give an exhibition of tumbling from the clouds, but the arrangement was not carried through. The merchants of one street, Kokkubun-cho, the main business street in the city, bore the expense of the band, while those in other quarters provided for the dancers, jugglers, and other items of expenditure.

The streets were gaily decorated; flags waved in the breeze, and ornamental lanterns hung from the eaves of nearly every house. Rare and valuable old screens, the pride and treasure of families, were placed in the shops in full view of all. Everyone was out in holiday attire, and the bright colours of the children relieved the darker costumes of their elders. Through the streets the children swarmed around and after the *dashi*, and a vast crowd surged and swayed hither and thither.

The garrison here contains several thousand soldiers, and it was only natural they should be foremost in paying respect to their brave comrades. There are one or two hundred of these loyal men buried in this city on the outskirts of the town, and at the top of a hill inconveniently situated for access but for the spirit of the reverential feeling, it mattered not whether the chief ceremony was held at the graves or elsewhere. The space on the west side of the city, between the barracks and the right bank of the Hirose river, called Kawauchi, was chosen as the site for the religious ceremony. In addition to the main bridge, another was thrown across the stream, a few yards lower down for the visitors to return over.

This plot of ground, nearly half a mile long and about a quarter of a mile wide, extends along the river and gently slopes from the foot of the hills, and the old stone wall marking the limits of the western barracks of the city. At the lower end was a large race course, with a grand stand for judges and invited guests at one point, and seats for the public partly round the course. The races were kept up through the larger part of two days. At the upper end of the ground was the ceremonial temple. In front was a large and beautiful arch of boxwood twigs and other evergreen plants, and stretching away towards the garrison entrance was an avenue of lanterns, with a tall, dark green *torii* at the end.

The temple itself was simply a temporary shed, erected of bamboo, and small timber, and covered with canvas, and of course without flooring. At the farther end was the shrine for the act of worship. Thousands of lanterns, with the rising sun on them, hung around the temple and from long lines running to the top of tall poles. A frail fence prevented the curious from intruding into the sacred edifice. A few seats were placed for those of high rank. Flowers, fish, game, animals, *mochi* (rice cake) were reverently offered and on the altar and around it the gifts were laid in profusion, *mochi* cakes of all shapes and sizes being especially abundant. The national flags were crossed over the entrance.

On one side of the temple was an enormous triumphal mound of red and white, over thirty

feet high, the whole topped by a mammoth *mochi* cake of cloth. Just beyond this was "Valour," typified in the struggle between a warrior and a deadly serpent. Still farther were shown for the amusement of the crowd, and booths and stalls to furnish eatables and drinkables for their comfort.

On the other side of the temple was a soldier on horseback with a drawn weapon. Horse and rider were of heroic size, and mounted on a high pedestal which was decorated with the *Kiri* leaf in front.

High in the hill behind this was a very curious object for such an occasion, a very wide spider's web. It was stretched between two tall trees, and may have represented the strength that lies in the union of a number of bonds, each weak in itself.

Between the temple and the race course were the chief means of amusing the thronging crowd. There was a platform for the performance of the *No* dance, which attracted very many. But most gazers were in front of the nimble manipulator of balls, saucers, and knives. He drew a much larger number than the races, and he was very skilful.

During the first day, fireworks were continually let off showing beautiful clouds of smoke of various colours, and occasionally sending out white balloons from the explosion high in the air. At night, from the streets far over in the city the display was witnessed by the people.

During the festival the grounds of the Castle, built by the first *Daimio* of Sendai, Date Masamune, were thrown open to the public, and the old deserted seats of lordly rule were filled. The place is now a part of the barrack enclosure, and, as a rule, the general public is admitted only during this festival. The founder had an eye for strategic points when he chose the summit of this lofty bluff overlooking the whole plain of Sendai. On the river side, wherever nature had not made the ascent too steep for man, he constructed a wall of huge blocks of stone closely fitted together. On the other side back from the river, a deep ravine makes approach difficult, and he strengthened the weak points with high ramparts. On this lofty site it was said Date Masamune built a tower several stories high, in which he kept the cross which his vassal Hasekura Rokuemon brought back from Rome. At present nothing of this tower, or of the old palace, or of any of the houses, remains, not a trace, one stone on another. The yard and grounds where the retainers watched and guarded are largely overgrown with weeds and bushes. Of the ancient splendour and power no signs are to be seen except the bold, precipitous, jutting peak, and the massive walls, with the beautiful view of the broad plain spread out beyond the river.

The main religious ceremony for the souls of the brave soldiers was held in the temporary temple early on the morning of November 22nd. By six o'clock military officers and civil officials began to ride up to the entrance. A Shinto priest read a eulogy for the dead, and placed some offerings on the altar. Then the officers and others offered their respects by bowing at the shrine. Later in the day any who wished could enter and show their devotion. As was natural, numerous soldiers were about, and gave a military air to the ceremony.

But the most popular sights of the whole festival were probably the *dashi*, or floats. There were several of these, but only two were very large or elaborate. All around them the small boy with his sisters, of the city, and the curious visitor from the country, were densely packed. The structures were about thirty feet high, and each had several figures in it. These lofty frames, with a trembling waving top, were slowly moved along two or three of the main streets, Kokkubuncho, Oomachi, and Minami-machi-dori. The closely packed multitude swayed in their wake. Both of them drew on the martial spirit of the warlike past for inspiration. Courage and loyalty, guiding principles in Japanese history, were taught by both.

In one we see a hero, Raiko, a member of the historic Minamoto family, in the act of receiving a commission from his emperor to exterminate the *oni*, or devils on Mount Oeyama. Hell is the home of these evil spirits, and the punishment of guilty men after death is their duty and pastime. In faithful submissiveness, the hero is leaning forward hearing the words of his master. Others had before been sent on this perilous mission, but all had failed. Raiko is successful not only in this, but afterwards in catching a bird of evil that had troubled the palace. It is likely that as a fact he broke up and destroyed a band of robbers on Mount Oeyama. It is said he accomplished his work by giving the monsters wine, and despatching them in their slumbers.

The second *dashi* represented what was more likely a reality than the first. About nine hundred years ago, before the time of Yoritomo, all this country was in a barbarous condition, and probably inhabited by the Ainos. A brave and able man, named Abe, ruled this land. He was bold

and independent, and defied the emperor. So the emperor sent Yoshiie Hachimantaro, a member of the Minamoto family, but of later date than Raiko, to induce Abe to submission. The scene showed him as he heard his lord's order. On the throne above is the sovereign, while Yoshiie is below, and attendants are about.

The valiant soldier sets out on his campaign against the unfaithful steward. Through the long years he grappled with his opponent, and twice was he forced to come from the south to the north in discharging his duty. The first expedition filled nine years, the second, three. At length after many bloody battles, the rebellious subject, Abe, and all his family were despatched, except one that was taken captive to Kyoto. This unfortunate survivor only saved his life by promising vassalage to his captor. But he nursed the flame of revenge and only waited a good opportunity to wipe out the stain on his honour. Yoshiie, however, trusted him so implicitly as to walk out with no other attendant. One day the chance, long looked and prayed for came, when the master fell asleep with none near but the captive vassal. But the captive was touched at this supreme evidence of trust; his spirit of vengeance died out for good, and he became a vassal in heart as well as in name.

Another incident illustrates Yoshiie's nobility and generosity of spirit. When he returned to Kyoto after his success in the north he may at times have talked somewhat boastfully of his battles. One evening at a hotel he was overheard by an eminent scholar, Masafusa Oe, as he told of his battles. This distinguished student remarked in the hearing of Yoshiie's vassal that he was sorry to brave a soldier as Yoshiie had so little knowledge of tactics. The attendant was very angry and wished his master to cut down the *savant* for casting reflections on so great a warrior. But Yoshiie declared himself happy in having his weak points shown to him, and sought instruction from this well-known tactician. C. M.

Sendai, December 1st, 1890.

THE LATE MR. EDGAR ABBOTT.

Many of the leading residents assembled on Sunday afternoon at the General Cemetery to pay the last tribute of respect to the memory of Mr. Edgar Abbott. As already stated in these columns, the remains of the deceased gentleman were, in accordance with his expressed wish, cremated in England, the ashes being sent to Japan to be deposited in the Cemetery where so many of Mr. Abbott's friends lie, and where many others will yet find their last resting place. Two stones of granite, square in form and of massive proportions, had been placed on the upper plateau of the cemetery enclosure, one containing a cavity designed for the urn, and the other to be laid above it and thus to enclose the relics. On the latter was cut the inscription:—

THIS STONE IS TEMPORARILY
ERECTED
IN MEMORY OF
EDGAR ABBOTT,
BORN 25TH NOVEMBER, 1850,
DIED 17TH JULY, 1890,
AT 20, MANCHESTER SQUARE,
LONDON.

BY HIS EARNEST DESIRE
HIS BODY WAS CREMATED IN ENGLAND
FOR HIS ASHES TO REST IN JAPAN.
THEY WERE DEPOSITED
HERE NOVEMBER 1890.

Round the base of the stones lay heaped numerous beautiful wreaths sent by friends of the dead.

The ceremony had been fixed to take place at 4 o'clock, and the sun was sinking to the western horizon when the wooden casket containing the urn was brought up and placed at the base of the pedestal. A few minutes later Rev. E. C. Irwine, the M.A., stepped forward and read a short service, after which Mr. N. J. Hannen, and Mr. M. Kirkwood, two of the most intimate friends of Mr. Abbott, opened the casket and taking out the urn placed it reverently in the cavity. A few handfuls of earth were then thrown in above it.

Mr. Irwine at this point said—My friends, remembering our friend Edgar Abbott as I do, remembering his quiet demeanour while he lived amongst us, and the certain amount of calm reserve which prevented him from as a rule giving his heart to the world wearing it upon his sleeve,—I would merely wish to say such few words as, if he were living, I trust he would like to hear me say. I only express, I am sure, the feeling of all here when I say that Edgar Abbott in making this request of his (the particular form which it did, desired to convey to us

in the most forcible manner possible the fact that this was the home of his heart. Into the causes and reasons why this was so it is not necessary for us to go; it is sufficient for us to remember that a man who has lived more than one decade as he did, interesting himself in almost everything that concerned the place and forming gradually about him those silent links which arise from communion with his fellows,—it is sufficient to know that this was the place on earth dearest to him. The manner of the disposition of his mortal remains is to some new and strange. Yet there is nothing new or strange about it. It was the way adopted by many of the ancient Romans, and this, it is to be remembered, was a boy brought up in one of the great English public schools and imbued very strongly and deeply with all the old Roman spirit, a feeling which to a great extent pervades the education of those schools, and furthermore brought up in after life in the East, where our ideas on this point have modified as years roll on. I must say for myself that I think the form in which his ashes were literally sent to us is one that commends itself to all reason and common sense in the highest degree, when any one wishes the remains of his perished body to be transferred from place to place. There is about this nothing in the slightest degree repulsive. For we cannot think that a man's identity consists in any degree in the mere ashes which constitute his visible body. His identity is something else, filled with human vitality and force, living and taking to himself from time to time different atoms. And I trust you will excuse me if I think and believe that there is no one here that has so little hope in the future life as to believe that the identity of a great, a strong, and forcible soul like this, living here in the sun for 40 years, working, full of taste, energy, courage, and daring—that we are to believe that in this life only there is hope, and that afterwards the man has perished. We believe not, and even if we do not all of us believe not, yet I say it is the noblest thing a man can hope. Hope that in the after life his energy shall not be wasted, that nothing shall be lost or left to perish in the void, but that God at length will make the pile complete, with human life and human energy, strong against disease, suffering and sorrow which He partook, strong to work for His purposes in some better life than this, in some eternal, some heavenly land.

This closed the ceremony, and the upper block of stone was carefully placed in position, sealing up the urn in its receptacle.

Among those present were Messrs. J. P. Morrison, J. K. Goodrich, S. D. Hepburn, W. B. Walter, Hara Rokuro (late president of the Shokin Ginko) E. J. Moss, Paymaster McDonald, Dr. Gravatt, Dr. Hall, Messrs. R. S. Schwabe, H. C. Litchfield, J. F. Lowder, H. M. Roberts, G. H. Scidmore, O. Schiune, C. M. Duff, J. A. Fraser, Dr. de Jongh, Captain Carst, Captain Hanford, the Hon. the Master of Napier, J. H. Brooke, E. Morris, T. H. Box, J. Gibbs, Captain Wilson Walker, J. E. Beale, A. B. Walford, Baird, F. Walkinshaw, C. Gibbins, G. H. Alcock, M. Ginsberg, Marquis Nembrini Gonzaga, Hegt, N. F. Smith, A. L. Robinson, R. Meiklejohn, J. Bunting, &c.

ST. ANDREW'S BALL.

The community of Caledonians have so accustomed their fellow residents in the port to view the St. Andrew's Ball as the event of the year, that little surprise was felt, only gratified expectation, on the fact becoming apparent that the 1890 celebration was even a more pronounced success than its predecessors. St. Andrew's Day has come and gone, leaving none but pleasant and happy memories. Looking at the uniform success which has attended the efforts of the Scotchmen to entertain their friends, it is difficult to believe that any serious desire ever existed to substitute another form of celebration for that which has produced such happy results. It almost seems as if the members of the society are irrevocably committed to a ball, for plainly no other form of entertainment could possibly afford such general enjoyment and pleasure.

As usual at these events the decoration of the hall formed a distinctive and prominent feature of the affair. The system followed by the Committee on this occasion was pretty much the same as in former years, consisting chiefly of the placing at various points of shields bearing the arms of historical Scotch houses, and surrounded by flags, these groups being connected by lines of flowers and foliage. A new feature was the carrying round the walls just under the cornice of a twisted line of foliage, in which were frequent clusters of flowers embosomed in the spikes

of the palm radiating starlike from a centre of colour. At the north end of the hall, between the two entrance doors, was placed a blue shield with a gold chrysanthemum on a white St. Andrew's cross, and having on each side banners bearing the Lion of Scotland, while beneath it was displayed a deer's head. A branch of decoration which last year was much admired had been omitted on Friday evening. This, however, which consisted of long festoons of flowers and evergreens depending from the centre chandelier to the walls, was judged to be unnecessary, the ceiling and interior of the hall generally having been very recently repainted and decorated. As the event proved, this decision of the Committee was a wise one, and when lit up in the evening, the hall presented a very lively picture, the radiance of the ordinary lights being tempered by the warm glow of several coloured lamps placed at different points. Of the arrangement of the various rooms it is only necessary to say that the stage and its adjoining apartments were devoted to the purposes of drawing rooms and ladies' retiring rooms, the former being the uses to which the front and rear part of the stage were put and the latter the functions of the smaller apartments. Flanked by beautiful palms, and fronted by a promenade of red cloth extending across the width of the hall (covering the orchestra floor, which was found impracticable for purposes of dancing) the stage, being ceiled with red and white cloth and hung round with flags, was hardly less pleasant to the eye than the ball room itself with its ever-changing play and picturesque groupings of colour.

Supper was laid in the small hall, seats being provided for about a hundred at a time. No particular attempt to decorate this apartment had been made, but the vestibule was of course furnished with fauteuils half concealed with tall palms. Upstairs were the refreshment and smoking room and the gentlemen's cloak-room, card tables being provided for those who preferred to while an hour away at whist.

Dancing began at nine o'clock to the music of the Marine Band. In previous years the absence from the programme of the national dance, the Reel, had been a cause of much sorrow to all patriotic Scotch folk, and an energetic attempt was made to remedy the omission on this occasion. The movement was a pronounced success, thanks chiefly to the pains taken by a lady whose absence in consequence of illness from the dance was the cause of much regret. Some twenty-six couples took the floor for the "reel," and began threading the mazy intricacies of that festive dance to the stirring strains of "Lady Mary Ramsay." The music was given by Mr. H. M. Arnold (piano) and Mr. D. McLaren (violin), in whose hands the old strathspey, followed by "Mrs. McLeod of Rassay" in reel time received full justice. Perhaps at the next ball (for that the next celebration of the day will be a ball we do not doubt), we may have a Scotch reel danced simply to strathspey and reel music, and the "Reel of Tulloch," occupying a separate place on the programme, to be danced to its own proper air, "Houlachan." But that is a long distance away, and its very thankful we are to have had a Scotch reel what-
 effier. And a very pretty and stirring sight it was, indeed, to see.

Following is the menu card of the supper:—

BEF. TEA.
 HAGGIS.
 GALATINS OF CAPON.
 TRUFFLED TURKEY.
 GAME PIE. YORK HAM.
 ROAST HAUNCH OF MUTTON.
 ROAST BEEF. ROAST PHEASANT.
 ROAST WILD DUCK. ROAST CHICKEN.
 CORNED TONGUE OF BEEF.
 CORNED TONGUE.
 SALADS.
 CHARLOTTE CHANTILLY.
 JELLIES.
 PASTIES ASSORTED.
 ICE CREAM.
 TEA AND COFFEE.

Following were the stewards:—Messrs. J. A. Fraser, W. Gordon, W. Aitchison, E. L. Anderson, J. Johnstone, W. J. Cruickshank, J. A. Jeffrey, M. T. B. Macpherson, A. Patterson, E. W. Ure, F. H. Grant (Secretary).

We append the dance programme:—

1. Highland Schottische.	9. Waltz.
2. Waltz.	10. Caledonians.
3. Caledonians.	11. Polka.
4. Waltz.	12. Waltz.
5. Highland Schottische.	13. Lancers.
6. Waltz.	14. Highland Schottische.
7. Reel.	15. Waltz.
8. Waltz.	16. Waltz.

The following is a list of the invitations:—

Mr. and Mrs. Abbey, Miss Abbey, Mr. and Mrs. Abegg, Capt. and Mrs. Allen, Mr. and Mrs. Arishima, Mr. and Mrs. Averill, Sir Edwin and Miss Arnold, Governor and Mrs. Asada,

Messrs. H. Abegg, L. T. Acevedo, G. Adet, A. S. Aldrich, G. H. Alcock, E. Andries, J. R. Anglin, A. Arneemann, C. W. Arnould, H. M. Arnould, Ayala (Spanish Legation), E. Passey Adams, D. Anderson, R. Abenheini.

Mr. and Mrs. E. de Bavier, Mr. and Mrs. Bayne, Mr. and Mrs. Bird, M. and Mdm. Blanc, Mr. and Mrs. G. Booth, Misses Booth, Mr. and Miss Bourne, Mr. and Mrs. Brearley, Mr. and Mrs. Brent, Mr. and Mrs. Brinkworth, Mr. and Mrs. Brooke, Mrs. Brower, Mr. and Mrs. Bugbird, Mr. and Mrs. Bull, Mr. and Miss Blakeway, Mrs. Bailey (U.S. Legation), Admiral and Mrs. Belknap, Captain and Mrs. Bouguin, Mr. and Mrs. Barrie, Captain and Mrs. Botherton, Messrs. A. Barnard, G. W. Barton, J. E. Beale, E. Beart, E. Berard, F. Biagioni, V. Blad, T. Brewer, T. L. Brower, Dr. Baelz, Bishop Bickersteth, Baron R. von Biegelben (Austro-Hungarian Minister), Mr. H. A. C. Bonar, Captain Brinkley, Mr. W. R. Bennett, Count Bylandt.

Mrs. Cain, Mr. and Mrs. Cain, Junr., Mr. and Mrs. Cameron, Mr. and Mrs. Carew, Capt. and Mrs. Carrew, Captain and Mrs. Carst, Mr. and Mrs. Center, Mr. and Mrs. Chope, Mr. and Mrs. Clausen, Dr. and Mrs. Cox, Mr. and Mrs. Crawford, Miss M. A. Crawford, Mr. and Mrs. J. H. Curtis, Mr. and Mrs. A. W. Curtis, Prince and Princess de Caristi, Mr. and Mrs. Craue, Misses Crane, Capt. and Mrs. Craigie, Messrs. A. Churchill, S. Cocking, J. Colomb, P. Colomb, J. B. Coulson, B. H. Chamberlain, J. Conder, G. C. Charlesworth, A. Coye, J. Crane, Jun.

Mr. and Mrs. Dare, Mr. and Mrs. Deakin, Mr. and Mrs. Dinsdale, Mr. and Mrs. Dress, Capt. and Mrs. Drummond, Mrs. and Miss Delafeld, Miss Despres, Misses Denning, Dr. and Mrs. and Misses Divers, Mr. and Mrs. Dunlop, Mr. and Mrs. Dabbs, Miss Dinnis, Messrs. F. R. Daniel, Paul de Groote, E. D. de La Penne, P. Duryea, W. Denning, H. W. Denison, Yeend Duer, E. Dum, and Dr. Dowson.

Mr. and Mrs. Edwards, Capt. and Mrs. Efford, Miss Efford, Dr. and Mrs. Eldridge, Miss Eldridge, Mr. and Mrs. J. T. Esdaile, Mr. and Mrs. Eugert, Messrs. W. D. S. Edwards, and E. B. Edwards.

Mr. and Mrs. J. A. Fraser, H.E. Hugh Fraser (H.B.M. Minister), and Mrs. Fraser, Messrs. R. Fachmann, V. Faga.

Mr. and Mrs. Miss Gibbs, Mr. and Mrs. Gillett, Mr. and Mrs. Ginsberg, Mr. and Mrs. Goodrich, Mr. and Mrs. Gorbam, Mr. and Mr. Gorman, Dr. and Mrs. Gravatt, Mrs. Greathouse, Mr. and Mrs. Grosser, Mr. and Mrs. Grunwald, Mr. and Mrs. Gardiner, Messrs. A. O. Gay, C. Gibbens, B. Gillett, C. R. Greathouse (U.S. Consul-General), A. H. Groom, J. T. Griffin, Committee of the German Club, E. A. Griffiths, J. H. Gubbins, G. Gilbert, F. Gil, H. Goldman.

Dr. and Mrs. Hall, Mr. and Mrs. Hannen, the Misses Hannen, Mr. and Mrs. Hartland, Mr. and Mrs. R. Hay, Mr. and Mrs. A. Hearn, Mr. and Mrs. Hegt, Mr. and Mrs. von Hemert, Miss von Hemert, Dr. and Mrs. Hepburn, Mr. and Mrs. S. D. Hepburn, Mr. and Mrs. Hinton, Mr. and Mrs. G. Hodges, Miss Hodges, Mr. and Mrs. Howard, Mrs. Hubbard, Mr. and Mrs. Hutchison, Mr. and Mrs. Holmes, Mr. and Miss Heulein, Messrs. J. W. Hall, F. J. Hall, J. L. Halphen, H. Harding, Dr. Harris, Mr. M. H. R. Harris, Capt. Haswell, Messrs. L. Ph. von Hemert, H. V. Henson, Dr. van der Heyden, A. Hofmann, J. Holm, F. H. Hooper, Dr. Howe, Mr. A. J. Hare, H.E. Dr. Von Holleben (H.I.G.M. Minister), Mr. Heckert, Captain and Wardroom Officers of H.M.S. *Hyacinth*.

Rev. and Mrs. Irwine, H.E. Mr. R. W. Irwin (Hawaiian Minister), Mr. and Mrs. James, Mr. and Mrs. Jensen, Mr. and Mrs. Johns, Mr. and Mrs. F. H. James, Mr. and Mrs. E. L. James, Mr. and Mrs. Jewett, Messrs. E. B. Jones, J. M. James, Sir Allen Johnson, Messrs. J. A. Jark, H. H. Jacobs, W. S. Johnson, and H. A. Jones.

Captain and Mrs. Kenderdine, Mr. and Mrs. Kinney, Mr. and Mrs. Klobukowski, Mr. Köhler, Mr. and Mrs. Kirby, Mr. and Mrs. Kirkwood, Mr. and Mrs. Knapp, Dr. and Mrs. Knott, Messrs. M. Kaufmann, O. Keil, W. J. Kenny, N. P. Kingdon, E. D. Kenyon, Dr. R. Kleffell, Miss Leach, Miss Leslie, Mr. and Mrs. Lindsay, Mr. and Mrs. Lowder, Mr. and Mrs. Loureiro, Miss Loureiro, Prof. and Mrs. Liscomb, Prince and Princess Lobanow de Ratow, Miss E. M. Leimbach, Mr. and Mrs. Lawrence, Mr. and Mrs. C. P. Low, Miss Loring, Messrs. H. C. Litchfield, A. Langfeldt, Captain and Wardroom Officers of H.M.S. *Leander*.

Mr. and Mrs. Manley, Mr. and Mrs. J. Martin, Mr. and Mrs. C. M. Martin, Mr. and Mrs. McShane, Mr. and Mrs. Meier, Mr. and Mrs. Merian, Mr. and Mrs. W. L. Merriman, Mr. and Mrs. Mitchell, Mr. and Mrs. Mitsuhashi, Mr. and

Mrs. Mollison, Mr. and Mrs. Morris and Misses Morris, Mr. and Mrs. T. J. Morris, Mr. and Mrs. C. D. Moss, Mr. and Mrs. E. J. Moss and Mrs. Moss, Dr. and Mrs. Macdonald, Mr. and Mrs. Macnab, Mr. and Mrs. J. Macdonald (Tokyo), Mr. and Mrs. Mosse (R.N.), Capt. and Mrs. Münster, Messrs. J. B. Maxwell, H.E. R. de Martino (Italian Minister), Professor J. Milne, Dr. Mécère, Messrs. T. F. McGrath, M. Marshall, G. K. Mosle, S. Moutrie, A. Mottu.

H.E. and Mdm. Neyt, Miss Nickerson, Mr. and Mrs. Noble, the Master of Napier and Hon. Mrs. Napier, the Captain and Wardroom Officers of the Russian cruiser *Admiral Nakhimoff*, Messrs. J. Naudin, O. H. P. Noyes, E. P. Nuttall, J. Newson, and Marquis Gonzaga Neobrin.

Mr. and Mrs. Olmsted, Captain and Wardroom Officers of U.S.S. *Omaha*.

Mr. and Mrs. Parsons, Miss Patridge, Mrs. Phillips, Mr. and Mrs. Pope, Mr. and Mrs. Pratt, Major-General and Misses Palmer, Mr. and Mrs. Piggott, Mr. and Mrs. Pakenham, Mr. and Mrs. C. W. Pownall, Mr. and Mrs. Van de Polder, Mr. and Mrs. Poole, Mr. and Mrs. Page, Capt. and Mrs. Phillips, Messrs. W. T. Payne, A. W. Payne, E. J. Pereira, J. F. Pinn, L. Pollard, E. Powys, J. J. Pearson, Captain and Wardroom Officers of H.M.S. *Pigmy*.

Mr. and Mrs. A. C. Read, Mr. and Mrs. Reimers, Mr. and Mrs. Retz, Mr. and Mrs. Rice, Misses Rice, Mr. and Mrs. Rickett, Mrs. and Miss Robertson, Mr. and Mrs. Robinson, Mr. and Mr. Rohde, Mr. and Mrs. Miss Roux, Lieutenant Reamey, (U.S.N.) and Mrs. Reamey, Messrs. H. de Raasloff, Gower Robinson, A. L. Robinson, Dr. Russell (U.S.N.), W. Rhodes, R. Reiff, and H. M. Roberts.

Mr. and Mrs. Stone, Mr. and Mrs. Sargent, Misses Storm (Grand Hotel), M. and Mdm. Salabelle, Miss Salabelle, Mrs. D. J. Scott, Mr. and Mr. E. R. Smith, Mr. and Mrs. N. F. Smith, Miss Smith, Mrs. Gilmore Smith, Mr. and Mrs. Steele, Mr. and Mrs. St. John, Mr. and Mrs. Strome, Captain and Mrs. Swain, H.E. and Mdm. Schevitch (Russian Legation), Mdlle Schevitch, Rev. Archdeacon and Mrs. Shaw, Captain and Mrs. Squire, Mr. and Mrs. Silver Hall, H.E. Mr. Swift and Mrs. Swift (U.S. Legation), H. E. M. and Mdm. Sienkiewicz and Misses Sienkiewicz (French Minister), Mr. and Mrs. Sykes (Grand Hotel), Messrs. R. S. Schwabe, G. H. Seidmore, W. Shephard, L. Stonebrink, F. Strähler, J. Stürcke, Baron von Siebold (Austrian Legation), Dr. K. Schmidt-Leda (German Consul), Messrs. A. Stein, Captain F. H. Seymour, F. Solomon, and Showler.

Misses Tilden, Mr. and Mrs. G. S. Thompson, Mr. and Mrs. Townley, Mr. and Mrs. Trezize, Dr. and Mrs. Tripler, Mr. and Mrs. Truscott, Mr. and Mrs. Thorn, Miss Thorn, Messrs. F. H. Tanner, W. H. Taylor, E. W. Tilden, W. W. Till, T. B. Clarke Thornhill (H.B.M. Legation), and F. H. Trevithick, Captain and Wardroom Officers of the French cruiser *Triomphante*.

Mr. and Mrs. Varum, Miss Varum, Mr. and Mrs. Vincent, Mr. and Mrs. H. A. Vincent, Mr. and Mrs. Vacher, Messrs. F. Varenne, and F. Vivanti.

Capt. and Mrs. Walker, Mr. and Mrs. W. B. Walter, Miss Wilson, Mr. and Mrs. Jas. Walter, Mr. and Mrs. A. T. Watson, Mr. and Mrs. E. B. Watson, Mr. and Mrs. Weinberger, Dr. and Mrs. Wheeler, Mr. and Mrs. C. G. Wilson, Mr. and Mrs. W. N. Wright, Mrs. L. Wilson, Miss Weddell, Captain Watson (R.N.) and Mrs. Watson, Messrs. W. B. Walford, N. A. Walter, E. Whittall, C. H. Wilson, R. A. Wyllie, Capt. Wynn, Messrs. T. Wilkin, G. W. B. Watson, and S. Warming.

Capt. and Mrs. Young, Misses Young.

THANKSGIVING SERVICE AT UNION CHURCH.

Thanksgiving Day was observed on the 27th ult. by several in the community. Not a few attended Divine service in the forenoon at the Union Church, where the Pastor, assisted by the Rev. John L. Deering and the Rev. J. H. Ballagh, reminded many of the fitness and wisdom of the observance of one special day of gratitude and thanksgiving. The address was delivered by the latter gentleman. Selecting as the basis of his remarks, passages in the books of Deuteronomy (8 ch. 10 v.) and Jeremiah (29 ch. 7 v.), one from the law and the other from the prophets of the Old Testament scriptures, affording ample warrant for the day's distinctive service, stress was laid upon the essentially general nature of the bounties reserved for man by the world's Bountiful Benefactor. "They are not those of a highly intellectual

or spiritual kind which only the cultivated or devoutly pious can appreciate; they are of the practical kind," being laid in the earth on which we tread, out of whose physical characteristics we derive our nourishment, wealth, and mechanical resources. In this connection unique allusion was made to the stores laid long ago of the essentials for the potters' art at Seta-mura giving the very name to porcelain here, *seto mono*; and to the "scattering of certain productions in separate lands," as for instance the tea leaf and the mulberry in Japan, "two little leaves leading indirectly to all the intercourse with Western nations, and eventually to all their civilization and progress." We are compelled to rest content with little more than a résumé of Mr. Ballagh's strikingly interesting and pertinent discourse. Restricting himself to the consideration of three great evils averted or ameliorated during the year past, and secondly to three particular blessings the land might clearly be held to have received, attention was drawn to the late dearth of food, in connection with which the speaker rightly touched upon the greater danger a country mainly dependent upon one staple article of food ran in comparison with lands having a great variety of articles for food consumption; secondly, to the cholera scourge, which by many was attributed to the inferior and inadequate food supply; and thirdly, to the allaying of the anti-foreign feeling awakened by the apparent opposition to Treaty Revision. Reference was made to the abundant harvest of the present year, notwithstanding the floods which left suffering and want in several localities, still in receipt of the aid and benevolence of the Central Government, the total yield of which harvest is estimated at 43½ million *koku*, or over ten millions in excess of last year's crop; all this store of pearly grains, the speaker continued, "out-rivaling in value and usefulness all the pearls of the great ocean, is the gift of God in blessing the planting, the growth, the ingathering of the husbandman. No wonder God, of old, made the great Jewish festivals agricultural, as well as ecclesiastical and political." Speaking of the alleviation of the hostile feelings prevalent a short time since, the reverend gentleman briefly alluded to the sanguinary death of the Rev. Mr. Large on Good Friday, and the accidents which had occurred to other clergymen; events which might easily have been, but providentially were not, followed by any injurious consequences. And the occasion for gratitude in connection with the peaceable though stern and perilous conflict between capital and labour in other lands was not lost sight of. Passing from the negative to the positive side, emphasis was first laid upon the marvellous and momentous feature of the year in "the nation's realization of its hopes of a Constitutional Government." Is it anything short of the miraculous, Mr. Ballagh asked, "that such an event should take place and in such wise? was ever a Constitutional Government on so portentous a scale, embracing 43 millions of people, inaugurated in such wise as this? No bloodshed, no great dissension nor civil strife, but peacefully as the morning dawn of these beautiful days that have witnessed the people's festivities, or these magnificent moonlight nights that have beamed serenely on their rejoicings." Secondly, though in no wise inferior to the first in the opinion of the speaker, the progress made in moral and social reform should be cited: and the part played by active Christian men in the Local Assemblies, &c., notably in relation to the movement for the suppression of the social evil, was ably adverted to. In speaking of the third especial blessing the year had brought, the continued prosperity and progress of the cause of Christ in Japan, many of the evidences of which were briefly touched upon in treating of the movement for the abolition of prostitution, Mr. Ballagh noted the proportion of Christian men in the Imperial Diet; "thirteen Christian delegates is a vastly disproportionate ratio to the 300 delegates, compared with the forty thousand Christians among forty-three millions of people." In conclusion the reverend gentleman said it was no small matter that these delegates several are leading men; Mr. Nakashima Nobunuki, the President of the House of Representatives, being a member of the church that worships in the Union Church. The prayers of the native pastor of this Kaigan Church for many years that the Parliament when granted should be opened with prayer to Almighty God, if not answered entirely, is at least in part in the presence of two members of his Church in the Representative bodies of the Ken and Empire, Mr. Miyata in the Kanagawa Local Assembly, and Mr. Nakashima in the Diet.

HORSFORD'S ACID PHOSPHATE
Relieves Mental and Physical Exhaustion.

LETTER FROM KOREA.

(FROM OUR OWN CORRESPONDENT.)

Soul, November 18th.

Immediately on the death of the Dowager Queen, the King, agreeably to established custom, sent an officer to Peking to make the announcement. The funeral over, the absorbing topic for weeks among Koreans and foreigners was the usual visit of the Ambassadors bearing the condolences of the Emperor of China.

Ask the average Korean what relation his country sustains to China and he will promptly tell you it is a dependency or "colony." To such the way for the King was plain enough: let him do "according to the ancient and well established laws." To others, and it must be confessed they are few, the presence of diplomatic officers in Soul suggest new relations and raises the question whether it is proper for the King to do homage to the subject of his powerful neighbour. Great anxiety was felt by both parties at the probable course of the King, the Conservative or pro-Chinese party doing all it could to have the ancient custom observed. They were zealous in giving currency to all kinds of stories of trouble that would follow should there be any new departure. "Will the King go out of the city gate to meet the Ambassadors?" "Will he bow three times as before?" were questions on the lips of all, and no answer could be given for the royal mind had not decided what should be done. Thus the days passed, the Ambassadors left China and word came from the throne, "I will go out of the new west gate." The bearers of the Imperial message arrived in Chemulpo November 6th, and the next day came as far as Mapu, or about three miles from Soul. Here they rested, and the next morning early for such processions, the King came out to the official residence of the Governor of the Kiung Kin province, a few hundred yards outside the west gate. Here he awaited the arrival of the Ambassadors. A large tent was erected near the cross-section of the two roads and some foreign officials pointed out the place where the bowing on the part of the King was to take place. Time passed by, the crowd was great, but it was kept from the streets; the Ambassadors came to the tent, their chairs stopped; every eye was turned in the direction of the Governor's Palace to see the King come forth; a high official came and received a message; the chairs of the Ambassadors turned to go down the street leading to the large south gate—the King and the Ambassadors did not meet. The King immediately returned to the city, and the Ambassadors, entering by the south gate, were taken down to Chong Uo, and in that long roundabout way were led to the Royal Palace, where they had audience with and were entertained by the king.

Both conservative and Progressive parties were disappointed at the Royal doings. The former because he did not do enough, and the latter because he went too far. To speak in warlike figure, the day's encounter was undecisive, and both parties waited for further developments. The streets were full of rumours that the next day the King would call on the Ambassadors, but nothing definite was known. The next day came and went, but the King remained in the palace and the foreigners who agree with Judge Denning that Korea is an independent nation, though paying tribute to China, were delighted. The opposite party were less jubilant. But the time of rejoicing soon ended; the following Monday, that is Monday the 10th inst., the King with his courtiers paid a visit to the Ambassadors in the house where they were entertained, staying there several hours, and the next day when they left for Chemulpo, he again came from his throne and went outside the city to bid the distinguished visitors good-bye. It is generally understood that the pro-Chinese party are jubilant, and without trying to measure Oriental customs or politeness by western ideas of propriety, it does seem that China's claims of suzerainty were publicly admitted by the King. It is said, and I have no doubt justly so, that the King did not go as far as those in the past have done. For example, he did not meet, much less bow to, the Ambassadors outside the city gate. They were not permitted to enter the city by the same gate that the King did; the daily calls of the King were dispensed with; and when the Ambassadors left they went out as they came in—alone. Grant all these things and get all the comfort out of them you possibly can, the Royal actions were not such as become those of an independent sovereign. The young Korean in one of the schools in Soul is probably correct. He began his composition, "Korea is a small country in the eastern part of China."

LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, November 13th.

My last was dated November 1st, and I believe I indulged in no rash prophecies as to the result of the election which was to take place on the Tuesday following, though the indications of democratic success were apparent. Election day came, and is past, and now I may state that before the setting of the sun on November 4th, such a political tidal wave swept over the United States as we have rarely known in our history. Its dimensions may be inferred from the fact that in the House of Representatives of the 51st Congress, the Republicans have a comfortable majority of a score or so, whereas in the 52nd Congress the Democrats will have a majority of over two-thirds, so that the members of the party will constitute a quorum without a single member of the Opposition.

Democratic supremacy in the House will be no novelty. Of the thirteen Congresses which have assembled since the war, six have been Democratic. But the Democratic majority has always been so slender that the party required a full attendance of its members to carry party measures, and it has never enjoyed the prestige which accompanies complete success. Now the Democrats are going to be in such overwhelming numerical superiority that it will be hard work for the Speaker to find Republicans enough to constitute the minority section of committees.

The uprising of the people against the abominable legislation of the last session is indicated by the slaughter of almost every member who was prominent in fathering it. Messrs. McKinley, the author of the new tariff; Rowell, Chairman of the Committee on Elections, who stole the seats of democrats to give them to republicans; Cannon, the blatant Chairman of the Committee on Appropriations; Dorsey, Chairman of the Committee on Banking; Hitt, Chairman of the Committee on Foreign Affairs; Cutcheon, Chairman of the Committee on Military Affairs; Payson, Chairman of the Committee on Public Lands; Burrows, Chairman of the Committee on Manufactures; Carter, Chairman of the Committee on Mines; Donnell, Chairman of the Committee on Education, and a number of others, who were either chairmen or active members of committees, have all been elected to stay at home. The people evidently had a purpose.

As with the congressional elections, so with the state tickets. Wisconsin has elected a Democratic governor, and a Democratic legislature, ensuring the election of a Democratic senator to succeed Spooner. Connecticut, Massachusetts, Nebraska, Pennsylvania, have all elected Democratic governors. In states where no gubernatorial election was held, the state officials whose terms fell in are generally succeeded by democrats, and where the Republicans did save their candidates, it was by the slimmest kind of majority. Illinois, which was the Republican stronghold in the north-west, appears to have elected the entire Democratic state ticket, as well as fourteen out of the twenty congressmen. So clean a sweep was not in the calculations of the most sanguine Democrat on the evening of Nov. 3.

It is evident that all the way from the Rocky Mountains to the Atlantic coast, and from the Canadian border to Mason and Dixon's line there was an invisible, inaudible, and imperceptible revolution against continued Republican supremacy; and that this feeling controlled the actions of men who lived far apart, did not conspire together, nor act in concert. The popular notion at the present moment is that the McKinley bill did the work. But the bill had only been thirty days in operation, and its mischiefs had not been realised. It had its effect, no doubt. But it is doubtful if it could have caused so widespread a change of political sentiment, had it not been assisted by the disgust created by the pension bill, the silver bill, and the uniformly corrupt tendency of Republican legislation and Republican administration. The public are slow, and they often blunder. But they have a keen eye to detect hoodie schemes, and they saw or thought they saw hoodie in every act of the administration and every measure of Congress. People fell away from the Republican standard as the French fell away from the Imperial Court after Sedan, and for the same reason.

There was one rock on which the tidal wave of Tuesday beat in vain, and that was California. While all the rest of the country was turning Democratic, this state gave a large majority for the Republican state ticket and for the legislature and the congressmen. For this, it is quite easy to assign a reason. The present senior senator from California is Leland Stanford, who was for many years President of the Southern Pacific Railroad Company. Between him and his thirty-years partner, Collis P. Huntington, a savage feud

has lately broken out, and Huntingdon had no hesitation in denouncing him and his senatorial aspirations to all who would listen. Stanford accepted the challenge, and went to work to secure his election by methods he had often tried before. He literally bought up the whole state. How much he paid, no one knows; but those who can form an opinion, guess that from first to last his outlay cannot have been less than \$600,000, while it may have exceeded \$750,000. This is a good deal of money to pay for a seat in the Senate, to be occupied by a man of seventy. But millionaires must find some uses for their money, and the purchase of votes has at least the advantage of distributing the cash so employed. California will re-elect Mr. Stanford, and will send to the 52nd Congress six Republicans, who, one would imagine will feel rather lousy—*ravi nantes in gurgite vasto*.

The excitement of the election had not subsided when a new source of agitation arose in the shape of a panic in Wall-street. The underlying cause of this was the withdrawal of money from the channels of trade by the Government, in payment of taxes, and its burial in the Treasury vaults. The Government income exceeds its expenditure by about \$100,000,000 a year. No trade in the world could stand so heavy and continuous a drain to mitigate its evil effects. Secretaries of the Treasury have been in the habit of buying up bonds at a large premium, merely to release the purchase money; but this resource was fitful in its operation, and did not reassure capitalists or bankers. In October the banks of the grain states began as usual to draw on their New York correspondents for money to move the crops. While the banks were losing currency from this cause, two accidents occurred, which shook confidence. Silver, which had risen from 95 to 120 on the passage of the Silver Act, reacted slowly but steadily to 102, and numbers of operators who had bought at 108 or 110, in the sure faith that the metal was going to 120 without further delay, were seriously hurt. Then the long litigation over the sugar trust culminated in an announcement by Judge Pratt that he should feel it to be his duty to throw the trust into the hands of a receiver. This played havoc with trust certificates, which have been a popular fancy among the Wall-street gamblers. They went down by the run, and more money winged its flight to the vale where the woodbine twineth.

This was the condition of things, and a general feeling of uneasiness pervaded the street last Monday morning, when some leading banks called their loans simultaneously. The result was that everybody wanted his money, and no one had any to loan. People bid 10, 15, 20, and 25 per cent., without finding a dollar. Then they tried to sell their stocks, and the result was a decline of 5 to 10 per cent. all round. Then came a panic, in which brokers have failed, and banks have had to seek assistance from the Clearing House. The crisis has now lasted three days, but it was hoped yesterday that the worst was over.

The general trade of the country is healthy, and in Wall-street there are no balloons floating round which are liable to collapse. Thus the present prospect is that after a few more days of agony, liquidation will be nearly complete, and a period of dullness will ensue. But it is never safe to be sure where an outbreak of want of confidence will stop. There are some 3,300 banks in this country, and nearly all of them, it is to be hoped, are solvent; but if any considerable proportion of them are not, and this proportion should include banks of large capital, the present stock and money panic in Wall-street might develop into a commercial crisis.

Not the least unpleasant feature of the situation is that the Bank of England, and the London Stock Exchange are more or less involved in the flurry. The Bank has been losing gold, and is trying to draw it from the continental institutions which are protecting themselves by raising the rate of interest. They are such conservative financiers on the other side of the Atlantic that they think the end of the world has come when the rate of interest rises to 6 per cent. They would all die in convulsions if loans on call commanded 100 per cent. per annum as they did the day before yesterday in Wall-street.

A case which might engage the muse of a modern Eschylus has just occurred at Kansas City. Twenty-five years ago, two babies, a boy and a girl, were left destitute at the New York emigrant depot by the death of their only parent. Both were adopted; the boy by a man named Barr, the girl by a family of the name of Evans. They took the names of their putative fathers. In course of time, they grew up, in ignorance of each other's existence, met, fell in love, and married each other. They were living happily, with a family of children growing up

round them, when a lawyer hunted up the man Barr, and informed him that a legacy had been left him by a distant relative. The disclosure led to inquiries, and the relationship of the husband and wife came to light. The matter of fact Missourian reporter adds that eminent counsel have been retained to procure the annulment of the marriage.

IBARAKI NOTES.

Mito, November 29th.

The times for celebrating here the opening of the Diet have been various. On the 25th inst., the date of the actual opening, though nothing official was undertaken, a few flags were displayed from stores and houses. Yesterday (28th) the Normal School, and the Common and Higher Primary Schools, took a vacation, but indulged in no special celebrations. To-day, however, although stores are open, is pretty generally a holiday. The pupils of the High School marched out a short distance into the country to Semba Plain; and there, divided into an Eastern and a Western army, engaged in two hotly-contested, but bloodless, battles. The national ensign is flying in all parts of the city. This afternoon a party was given in the First Park; and during the afternoon and evening some other entertainments (social and gastronomical) may be on the programme. But, in fact, although there is here no less joy over the opening of the first Imperial Diet, there is comparatively little demonstration. This may, perhaps, be explained by the fact that it is only just one month since the people of Mito and vicinity were using all their strength, resources, and enthusiasm on the visit of the Emperor and the Empress. They may, therefore, be somewhat excusable for not making a grand demonstration even on this fortunate occasion. They are at least enthusiastic in heart; and there are none more so than the Mito Christians, who rejoice that one of their own faith is President of the House of Representatives, and that a dozen or so of their brethren are members of the Diet. CLEM.

IN THE SUPREME COURT OF JAPAN.

Before Judge IWAYA RYUICHI, Acting President of the Second Civil Bureau, Judges MASUDA BUNEI, KOMATSU HIROTAKE, TANITSU HARUZO, and NAKA SADAKATSU.

S. SUGIYAMA V. H. HIJIKATA.

Principles deduced from the following case:—The first day of the period for raising a civil suit shall not be included in reckoning such term. Notification No. 44 of the Judicial Department, issued in the 9th year of Meiji, allows certain days of grace in cases where the period for raising a civil suit has elapsed during the *Kwan-kai** (arbitration) but does not apply to those cases where the period above referred to has been allowed to elapse after arbitration has proved successful.

Reference.—Art. 1 of Notification No. 44, of the 9th year of Meiji:—"Thirty days of grace shall be allowed—from the day following that on which it is shown that the *Kwan-kai* has not been successful in bringing the parties into accord—to parties who have brought forward the case for arbitration, as a period within which they may raise a suit, the original period having elapsed during arbitration proceedings." Article 2 of the above mentioned Notification:—"If a plaintiff does not, arbitration having proved unsuccessful, bring an action within the above mentioned period of grace, he shall be held to have relinquished his right to raise such."

The appellant in this case had sued the defendant for repayment of a certain sum of money, and won his case in the Tokyo Court of First Instance. The latter, however, carried the case to the Court of Appeal. It was contended on the appellant's behalf that the sum of money in question had never been loaned; that, moreover, that the period allowed for raising a civil suit had elapsed; and that the Court below, in holding that the sum was loaned, and that Notification No. 44 permitted the raising of a suit when the original term had elapsed after the arbitration had not been successful, quite misunderstood the Notification, and for this reason an appeal was taken against its judgment.

For the defendant in this appeal it was urged that documentary evidence proved the loan under the signature and seal of the appellant, and that in cases where arbitration was unsuccessful and the period for raising an action had elapsed after

* In Japanese law every plaintiff has (except in mercantile and certain other suits) to submit his case to arbitration (*Kwan-kai*) before instituting a suit in the Court.

such arbitration, a suit might be raised within thirty days of the conclusion of arbitration proceedings.

In the Court of Appeal the Bench (Judges Serisawa Seion, Nagai Iwanajo, and Takano Moku) decided that the appellant had admitted the seal on essential parts of documents A 2 and 3 of the process to be his own true seal; that of the five objections of the appellant—(1) no man lends, without guarantee, money to a man whom he has never seen; (2) the respondent was not likely to loan money to a person who had not repaid previous loans; (3) the appellant being only a student and not a *koshu* (head of a family) was not likely to require so large a sum of money; (4) the fact that the respondent had previously sued another party, Taga Kei, in the Tokyo Court of First Instance for this debt, proved that Taga alone was liable; (5) the whole of the documents A 1—3 in the process were not in the writing of the appellant—the first, second, and third objections were of no value; the fourth did not prove that the respondent had absolved the appellant from responsibility; and as to the fifth the mere verbal statement of the appellant could not outweigh the respondent's evidence, inasmuch as the seal was that of the appellant. It was therefore held that the appellant was responsible for the sum of money referred to in documents A 2 and 3; but as cases where the period for raising a suit had elapsed after the parties had failed to agree by arbitration, could not benefit by Notification No. 44, the sum of money mentioned in the documents above referred to could not be claimed by the defendant in this appeal. On this last point the judgment of the Court below was wrong, and therefore the sum in question must be deducted from the amount to be repaid by the appellant under the judgment of the Court below.

The case was now carried by further appeal to the Supreme Court. For the original plaintiff, now the appellant, it was urged that as to the sum of money mentioned in document A 1, the term for raising an action had not elapsed. The time allowed for repayment of the money expired on the 20th day of the 7th month of the 16th year of Meiji (July 20th, 1883) and the action was raised on July 21st, 1888, the Court of Appeal holding that the statutory period for raising a suit had elapsed. According to Art. 3, Notification No. 362 of the 6th year of Meiji (1873), the time within which an action must be raised is five years; the latest time when the money had to be repaid was 12 p.m. on the 20th of July, 1883, according to the appellant's reading of the phrase "the sum shall be repaid by July 20th, 1883;" the appellant could therefore claim repayment only on the 21st because the use of the money was permitted till 12 p.m. on the 20th; and an action might therefore be raised on the 21st, the latter being the day following which the term for raising a suit began to elapse. If from that day five years were reckoned the term would be found to expire on July 21st, 1888; therefore the case was not raised after the lapse of such term. According to the laws of all countries the first day of a term reckoned by days was not included, and as on this point the laws of Japan must be regarded as identical with those of other countries, the judgment of the Court of Appeal was therefore inconsistent with the true principles of law. The appellant further pleaded that while he had contended in the Court of Appeal that Notification No. 44 must apply to his case, the respondent holding the contrary, the Court of Appeal expressed no opinion beyond stating that Notification No. 44 did not apply to those cases where the period for raising an action had elapsed after the parties had failed to agree by arbitration, the judgment being therefore defective in reason.

For the defence it was contended that the appeal was groundless.

The Judges decided that as the period within which the sum must be repaid expired on July 20th, 1883, the five years ought to elapse on July 20th, 1888, beginning to count the five years from July 21st, 1883. Suppose one were to count one year from July 1st, 1889, the last day of the year so reckoned would be June 30th, 1890. But if the period were reckoned according to the view taken by the appellant—that was to say that from July 21st, 1883, to July 21st, 1888, made five years—a full year would be from July 1st, 1889, to July 1st, 1890. But this period would really be one year and one day. On the point that the first day of the term should not be counted, there existed no written law in Japan. Therefore July 21st, 1888, on which the present suit was raised in the Court of First Instance, was the day following the last day of the five years; the term during which an action might be raised had already elapsed, and the judgment of the Appeal Court on this point was according to law. There was, moreover, no ground for the allegation of the appellant that the Court of Ap-

peal had given no reason for the opinion that this case ought not to be included in those to which Notification No. 44 applies, because, as a matter of fact, the Court of Appeal laid it down that in cases where the period for raising an action elapsed after the parties had failed to come to an agreement by arbitration, Notification No. 44 of the Department of Justice, promulgated in 1876, would not apply, that Notification clearly providing that thirty days of grace shall be allowed in cases when the term for raising an action had elapsed during arbitration. On all points therefore the appeal must be rejected.—*Saiban Suishi*, Oct. 31st, 1890.

Before Judge Y. NISHIOKA, Chief of the First Criminal Bureau; and Judges S. YAMANE, S. KAWAGUCHI, S. MASATANI, and S. OKUYAMA.

INFANTICIDE.

Principles deduced from the following case:—Persons who have been in consultation as to the act of taking the life of another, but have not taken part in such act, shall be held not guilty of the same.

Reference:—Art. 292, Penal Code:—"Anyone who takes the life of another with malice prepense shall be held guilty of murder with malice prepense and be punished with death." Art. 104, Penal Code:—"Where two or more persons actually commit an offence, each shall be held to be an offender in the first degree and both shall be punished."

The accused, Yamaguchi Kameji, and two others were tried in the Kobe Criminal Court, which decided that the accused had rendered himself liable to punishment by death, under Art. 292, Penal Code; but in respect of extenuating circumstances, he was sentenced to twelve years' imprisonment with hard labour, under Arts. 89, 71, and 17 of the Penal Code.

The accused appealed, asserting that the judgment was based on an error in fact, inasmuch as on the day mentioned in the judgment and on the day following he was in the house of Kumataka Shigekichi, in Sakamoto-cho, Himeji, and thus, not being present when the crime was committed, he was not privy to the act.

The public procurator of the lower court opposed the appeal as groundless.

On behalf of the accused it was urged on the facts set forth in the judgment that the three persons (including the accused) mentioned, agreed to kill the child, finding it impossible to bring it up; that one of them, Mise, suffocated it with a large *futon* about ten o'clock at night, the facts, showing, however, that the appellant did not take part in the act. The 104th article of the Penal Code which was applied to the case, should not have been so applied, because such article only refers to cases where two or more persons actually committed a crime together. The judgment therefore was contradictory both of fact and of law. The act of the accused in transporting the body of the child to another place was not an offence, such act having taken place subsequent to the crime under trial.

The bench of the Supreme Court found that the original judgment set forth that the three persons indicted agreed to kill the child on the ground that they could not bring it up; that Mise, one of their number, suffocated it with a large *futon*; that the appellant, with Tsurumatsu, placed the remains in a kerosene box and buried them under a tombstone at Kitayama; and that the lower court awarded punishment under Arts. 104 and 292 of the Penal Code. The judgment, however, was wrong and a misapplication of law, because the accused was only privy to or in consultation as regards the taking of the child's life, which act was committed by Mise, the accused taking no part in it. The transportation of the remains did not render the accused guilty of murder, as that took place subsequent to the crime. The accused must therefore be held not guilty, under Art. 2 of the Penal Code and Art. 401 of the Code of Criminal Procedure, and be discharged, the judgment of the lower court being cancelled under Art. 429 of the Code of Criminal Procedure.—*Saiban Suishi*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 28th.

At the reassembling of Parliament it was announced by the Government that the securities for peace had not diminished, and reiterated that the land purchase and tithe schemes would

be brought forward. Both Houses voted the Addresses unamended.

Mr. Gladstone has published a letter urging Mr. Parnell to resign. Mr. Parnell refuses to comply, and Mr. Gladstone threatens to resign unless Mr. Parnell retires.

London, November 29th.

It is stated that Mr. Parnell has resolved to maintain his position unless his party passes a direct vote of no confidence.

London, December 1st.

Lady Connemara has gained her suit in the Divorce Court, and a decree nisi has been pronounced.

London, December 2nd.

Lord Wenlock has been appointed Governor of Madras.

Mr. Parnell has issued a manifesto remarkable for its disdainful tone towards Mr. Gladstone and Mr. Morley.

London, December 3rd.

Messrs. Dillon, O'Brien, Sullivan, and others have signed a manifesto, which has been issued in Chicago, declaring the continuance of Parnell's leadership to be impossible.

"SPECIAL" TELEGRAM TO "JAPAN MAIL."

Washington, December 2nd.

Congress met on the 1st December, and President Harrison, in his annual Message to the Congress, in referring to Japan said that, while he would try to prevent undue discrimination against American interests, he hoped the legitimate expectations of Japan regarding treaty revision would be satisfied.

TIME TABLES AND STEAMERS.

TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6.05, 6.40, 8.35, 9.30, 10.25, and 11.45 a.m., and 1.25, 2.30, 3.55, 4.45, 5.50, 6.50, 8.30, 9.55, and 11.15 p.m.

UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.20, 8.10, 9.15, 10.22, and 11.30 a.m., and 12.45, 2.30, 4.25, 5.30, 6.35, 7.50, 9.10, 10.05, and 11.05 p.m.

Fares—First-class, *yen* 60; second-class, *yen* 40 and third-class, *yen* 20.

Trains marked (*) run through without stopping at Omori, Kawasaki, Tsurumi, and Kanagawa Stations. Those marked (†) run through without stopping at Omori, Kawasaki, and Tsurumi Stations.

TOKAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9.10, 10.20, 11.25 a.m., and 12.40, 3.25, 4.55, 5.35, and 7.45 p.m.; and KOZU (up) at 6.35, 8.40, 9.40, and 11.07 a.m., and 1.17, 2.45, 4.58, 7.25, and 9.46 p.m.

Fares—To Hodegaya, first-class *yen* 6, second-class *yen* 4, third-class *yen* 2; to Totsuka, *yen* 18, *yen* 12, *yen* 6; to Ofuna *yen* 36, *yen* 24, *yen* 12; to Fujisawa, *yen* 42, *yen* 28, *yen* 14; to Hiratsuka, *yen* 60, *yen* 44, *yen* 22; to Oiso, *yen* 75, *yen* 50, *yen* 25; and to Kozu, *yen* 93, *yen* 62, *yen* 31.

Down trains at 6.50 a.m. run no further than Kyoto arriving there at 11.30 p.m.; at 10.20 a.m. no further than Nagoya, arriving at 10.10 p.m.; at 12.40 p.m. no further than Shizuoka, arriving at 6.50 p.m.; at 1.17 p.m. no further than Shizuoka, arriving at 8.48 p.m.; and the train at 3.35 p.m. runs to Kobe, arriving at 12.45 p.m. next day.

A tramway runs between Kozu and Yumoto (distance 4 ri). Jinrikisha may be hired between Yumoto and Miyasaka (distance 4 ri).

OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.30 and 9.40 a.m., and 12.05, 1.30, 4.03, 6.14, and 8.30 p.m.; KAMAKURA (down) at 7.41 and 9.51 a.m., and 12.16, 1.41, 4.14, 6.25, and 8.41 p.m.; and ZUSHIMURA (down) at 7.50 and 10 a.m., and 12.25, 1.50, 4.23, 6.34, and 8.50 p.m.; YOKOSUKA (up) at 6.45, 8.55, and 11.20 a.m., and 12.50, 3.50, and 7.45 p.m.; ZUSHIMURA (up) at 7.01, 9.12, and 11.36 a.m., and 1.06, 3.16, 5.26, and 8.01 p.m.; and KAMAKURA (up) at 7.11, 9.22, and 11.46 a.m., and 1.15, 3.26, 5.36 and 8.10 p.m.

Fares—To Kamakura, first-class *yen* 9, second-class *yen* 6, third-class *yen* 3; to Zushimura *yen* 15, *yen* 10, *yen* 5; and to Yokosuka *yen* 30, *yen* 20, *yen* 10.

OYAMA-MAEBASHI RAILWAY.

TRAINS LEAVE OYAMA (down) at 7.15 and 9.45 a.m., and 2.15 and 5.20 p.m.; KIRIU (down) at 5.9.11, and 11.40 a.m., and 4.10 p.m.; MAEBASHI (up) at 6.12 and 10.35 a.m., and 1.55 and 6.35 p.m.; and KIRIU (up) at 5.10, 7.13, and 11.37 a.m., and 2.57 p.m.

Fares—Oyama to Kiriu, first-class *yen* 97, second-class *yen* 66, third-class *yen* 33; to Maebashi, first-class *yen* 1.51, second-class *yen* 1.2, third-class *yen* 51.

KOZU-KOBE RAILWAY.

DOWN TRAINS LEAVE Kozu at 8.30 a.m., and 12.50, 2.13, 4.57, and 7.10 p.m.; GOTEMBA at 9.52 a.m., and 1.32, 3.35, 6.18, and 8.32 p.m.; NUMAZU at 5.20 and 10.40 a.m., and 2.30, 4.27, 7.09, and 9.24 p.m.; SHIZUOKA at 7.20 a.m., and 12.19, 4.12, 6.50, and 10.59 p.m.; HAMAMATSU at 6.10 and 10 a.m., and 2.40 and 6.45 p.m., and 1.16 a.m.; TOYOHASHI at 7.10 and 11.10 a.m., and 3.39 and 7.45 p.m., and 2.14 a.m.; OFU at 8.59 a.m., and 1.06, 5.22, and 9.28 p.m., and 4.02 a.m.; NAGOYA at 9.45, and 11.50 a.m., and 2. and 6.08 p.m., and 5 a.m.; Gifu at 10.53 a.m., and 1.3.06, and 7.99 p.m., and 6 a.m.; OGAKI at 11.24 a.m., and 1.28, 3.33, and 7.38 p.m., and 6.28 a.m.; MAIBARA at 9.45 a.m., and 1.24.9.50, and 8.55 p.m., and 7.45 a.m.; HIKONE at 10.05 a.m., and 1.18, 3.02, 5.25, and 9.06 p.m., and 7.58 a.m.; BABA (Otsu) at 12.3.15.4.40.7.10, and 10.43 p.m., and 9.34 a.m.; KYOTO at 12.45, 4.05, 5.35, and 8 p.m., and 10.14 a.m.; and OSAKA at 2.25.5.35.7.20, and 9.50 p.m., and 11.42 a.m.

UP TRAINS LEAVE Kozu at 5.55 and 9.55 a.m., and 1.55, 3.45, and 5.30 p.m.; OSAKA at 7.06 and 11.06 a.m., and 3.06, 5. and 6.36 p.m.; KYOTO at 5.35 and 8.40 a.m., and 12.40, 4.36, 6.40, and 8.05 p.m.; BABA (Otsu) at 6.18, and 9.31 a.m., and 1.30, 5.25, 7.31, and 8.50 p.m.; HIKONE at 7.56, and 11.05 a.m., and 3.03, 7.02, 9.08, and 10.25 p.m.; MAIBARA at 8.13, and 11.20 a.m., and 3.19, 7.20, and 10.42 p.m.; OGAKI at 9.30 a.m., and 12.36, 4.37, 8.46, and 11.54 p.m.; Gifu at 9.57 a.m., and 12.02, 5.04, and 9.15 p.m., and 12.17 a.m.; NAGOYA at 6. and 11 a.m., and 2.10 and 6.20 p.m., and 1.09 a.m.; OFU at 6.43 and 11.44 a.m., and 2.56 and 7.04 p.m., and 1.41 a.m.; TOYOHASHI at 8.30 a.m., and 1.30, 4.42, and 8.52 p.m., and 3.17 a.m.; HAMAMATSU at 6.30 and 9.45 a.m., and 2.45 and 6 p.m., and 4.25 a.m.; SHIZUOKA at 5.15 and 9.07 a.m., and 12.45, 5.20, and 9.45 p.m., and 7.08 a.m.; NUMAZU at 7.03 and 10.40 a.m., and 2.24 and 7.14 p.m., and 8.43 a.m.; GOTEMBA at 8.15 and 11.58 a.m., and 3.38 and 8.28 p.m., and 9.53 a.m.; and Kozu at 9.40 a.m., and 1.17, 4.58, and 9.45 p.m., and 11.07 a.m.

Fares—Kozu to Gotemba: first-class, *yen* 66, second-class *yen* 44, third-class *yen* 22; to Numazu *yen* 1.11, *yen* 74, *yen* 37; to Shizuoka *yen* 2.13, *yen* 1.42, *yen* 71; to Hamamatsu *yen* 3.57, *yen* 2.38, *yen* 1.19; to Toyohashi *yen* 4.23, *yen* 2.82, *yen* 1.41; to Ofu *yen* 5.22, *yen* 3.48, *yen* 1.74; to Nagoya *yen* 5.58, *yen* 3.72, *yen* 1.86; to Gifu *yen* 6.15, *yen* 4.10, *yen* 2.05; to Ogaki *yen* 6.42, *yen* 4.28, *yen* 2.14; to Maibara *yen* 7.05, *yen* 4.70, *yen* 2.35; to Hikone *yen* 7.17, *yen* 4.78, *yen* 2.39; to Baba *yen* 8.10, *yen* 5.40, *yen* 2.70; to Kyoto *yen* 8.40, *yen* 5.60, *yen* 2.80; to Osaka *yen* 9.21, *yen* 6.14, *yen* 3.07; and to Kobe *yen* 9.81, *yen* 6.54, *yen* 3.27.

The down train at 8.30 a.m. runs no further than Kyoto, arriving there at 11.30 p.m.; at 12.12 p.m. no further than Nagoya, arriving at 10.10 p.m.; at 5.05 p.m. no further than Shizuoka, arriving at 9 p.m.; and the train at 7.10 p.m. runs to Kobe, arriving at 12.50 p.m. next day. The up train at 5.55 a.m. runs no further than Shizuoka, arriving there at 8.40 p.m.; at 9.55 a.m. and 1.55 p.m. no further than Nagoya, arriving respectively at 6.07 and 10.15 p.m.; and the train at 5.30 p.m. runs to Shimbashi arriving at 1.40 p.m. next day.

UTSUNOMIYA-NIKKO RAILWAY.

TRAINS LEAVE UTSUNOMIYA (down) at 5.25 and 10.05 a.m., and 12.25* and 3.05 p.m.; and NIKKO (up) at 7.20 and 11.55 a.m., and 2.25 and 4.55* p.m.

* Through Trains to and from Utsunomiya.

OYAMA-MITO RAILWAY.

TRAINS LEAVE OYAMA (down) at 6.50 and 9.25 a.m., and 2.20 and 5.15 p.m.; and MITO (up) at 6.25 and 10.10 a.m., and 2.05 and 4.55 p.m.

Fares—First-class, *yen* 1.26; second-class, *yen* 84; third-class, *yen* 42.

YOKOSUKA STEAMERS.

STEAMERS LEAVE the Nippon Hatoba daily at 8.30 a.m., and 12.30 and 3.30 p.m.; and LEAVE YOKOSUKA at 8.30 a.m., and 12.30 and 3.30 p.m.—Fare, *yen* 20.

MAIL STEAMERS.

REPORTS.

The Japanese steamer *Wakanoura Maru*, Captain Kenderdine, reports:—Left Hakodate the 26th November at 2 p.m.; had moderate winds from the west, and cloudy weather; passed Shiriyasaki at 6.40 p.m., with fresh wind from S.W. and fine weather. Arrived at Oginohama the 27th at 4 p.m., fresh wind from S.W. and fine weather throughout the passage. Left at 5.40 a.m.; passed Inuboye at 9 p.m.; strong wind from W.S.W. and high sea continuing throughout the passage; passed Noshima at 10 a.m. Arrived at Yokohama the 29th November at 2 p.m.

The German steamer *Frigga*, Captain Nagel, reports:—Left Hamburg the 4th October and Hongkong the 23rd November; had fine weather to Oshima; thence to port strong west and north-east winds.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 29th November at noon; had moderate S.W. breeze and overcast sky to Oshima; thence fresh northerly winds and overcast to Onai-saki where wind hauled round to the eastward, strong breeze, squally. Arrived at Yokohama the 30th November at 5 p.m.

The British steamer *Belgie*, Captain Walker, reports:—Left Hongkong the 26th November; had fresh N.E. winds and moderate sea. Arrived at Yokohama the 1st December at 1.37 p.m. Time 5 days, 4 hours, 49 minutes.

The Japanese steamer *Satsuna Maru*, Captain Brown, reports:—Left Hakodate the 29th November at 2 p.m.; had strong N.W. winds and heavy snow squalls to Shiriyasaki; afterwards fresh to gentle N.W. winds and fine weather to Oginohama the 30th; had light variable winds and fine weather up to Noshima; thence fresh to moderate northerly winds and fine weather up to arrival at Yokohama, the 2nd December at 6.15 a.m.

The British steamer *Oceanic*, Captain Smith, reports:—Left San Francisco the 13th November at 3.03 p.m.; had light variable winds and fine weather to 37.40 N. and 140 W.; thence a succession of heavy S.W. and N.W. gales with hard squalls, rain and heavy sea, gradually moderating towards port; passed Noshima the 2nd December at 6.48 a.m. Arrived at Yokohama at 9.45 a.m. Time 18 days, 1 hour, 14 minutes.

The Japanese steamer *Omi Maru*, Captain Wynn, reports:—Left Kobe the 1st December at noon; had strong head winds and high head sea to port. Arrived at Yokohama the 2nd December at 7.14 p.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Hakodate the 1st December at 2 p.m.; had light variable winds and fine weather; passed Kinkasan the 2nd at 11.40 a.m.; weather coming on cloudy with passing showers; passed Inuboye at 2.30 p.m.; winds freshening with long southerly swell and thick rainy weather to port. Arrived at Yokohama the 3rd December at 1.50 p.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 29th November at noon; had fresh to moderate N.E. winds and cloudy sky. Arrived at Nagasaki the 1st December at 5 a.m. and left at 7.10 p.m.; had

light to moderate N.E. winds and overcast sky. Arrived at Shinonoseki the 2nd at 6.55 a.m. and left at 8.5 a.m.; had weather dull and cloudy with easterly winds; at 4 a.m. came on drizzling rain which continued to port with strong N.E. winds. Arrived at Kobe the 3rd at 4.55 a.m. and left the 4th at noon; had moderate N.W. winds and cloudy weather; passed Oshima at 7.45 p.m.; thence to port fresh easterly winds and very heavy swell with drizzly rain. Arrived at Yokohama the 5th December at 3.15 p.m.

Brown Talao	4.15 to 4.20

EXPORTS.

RAW SILK.

Our last issue was of the 28th ultimo; since that date settlements amount to 621 piculs, divided thus:—Hanks, 79; Filatures, 423; Re-reels, 113; Kakeda, 6. Direct shipments by Japanese have

been 68 bales, making a total business of the week of nearly 700 piculs.

Our Market has been quiet during the week, but holders have been strong, and have managed to maintain prices even getting some small advance on various parcels. Exchange after advancing a further 2 per cent., has again declined, and seems rather unsettled at to-day's quotations.

Cable intelligence from abroad does not seem very cheering, but there is all the time a steady under current of business going on both for the States and for Europe which serves to hold the Market where it is.

Our stock list shows a slight diminution on the week, and arrivals will now probably fall off as Winter draws near. Should exchange again decline we shall without doubt see higher quotations for Silk in Silver currency.

There have been three shipping opportunities since we last wrote; the Canadian, English and American Mails all taking silk. The *Batavia*, 28th ult, had 619 bales for the States, the *Ancona*, 29th ult, 123 bales for Europe, and the *Belgie*, which left port yesterday morning, had 490 bales for the New York trade. These departures bring the export figures up to 10,253 piculs, against 24,559 piculs last year and 18,840 piculs to the 5th December, 1888.

Hanks.—Considerable buying in these for Europe, and two or three parcels medium *Shinshu* have been taken at \$520. Stock in this class is small, but holders are fairly current, and some very common *Hachioji* have been done as low as \$480.

Filatures.—There was a little sport in this previous to the departure of the *Belgie*, and a few hundred boxes, good to best *Shinshu*, were taken at prices ranging from \$595 to \$605. No. 1 *Kohu* was also done at \$590, with No. 1½ at \$585. For Europe some few parcels of good fine sizes are booked daily at prices ranging from \$570 to \$590, according to quality. Stock in this department is large, but some of the wealthy owners, who are well able to hold, express their intention of doing so.

Re-reels.—These, too, are very strongly held in the higher grades and well known marks. *Kanva* Chop did indeed pass the scales at \$580; and the same price is wanted for *Five Girl*, *Tortoise*, and other similar brands. There has been some business doing to Europe in ultra-common, prices ranging from \$490 to \$510.

Kakeda.—Business in this has been small and holders show a desire to keep moving. It is probable that a bold offer would fetch some of these favourite silks at a low figure.

In other sorts nothing has been done.

QUOTATIONS.

WASTE SILK.

There is not so much business in this branch; settlements for the week being 600 piculs; viz:—*Pierced Cocoons*, 19; *Noshi*, 416; *Kibiso*, 182. The demand of spinners in Europe seems for the

moment to be satisfied, while shippers are busily sorting and packing their recent large purchases. Prices are firm at lowest quotations and the stock is good. Waste is rapidly decreasing, and holders feel themselves capable of carrying what is left without any difficulty, although they will not refuse to sell when buyers are ready.

The English mail steamer *Ancona* took again a large shipment for Marseilles and neighbourhood. Her departure brings the present export figures up to 12,943 piculs against 11,661 piculs last year and 13,050 piculs in 1888.

Pierced Cocoons.—Nothing but a very retail business has been done at previous prices; *Shinshu* of rather poor quality fetching \$112½.

Noshi.—Considerable business in *Joshu*; prices from \$70 to \$87; *Oshu* at from \$135 to \$147, and fine *Hachioji* at from \$138 to \$147. One small parcel of *Filature* was booked at \$152.

Kibiso.—Trade has fallen off somewhat, although there has been some business in *Filatures* at from \$110 to \$120. A parcel of good *Joshu* brought \$45, while some very low *Curlies*, full of dirt and rubbish, brought \$14.

There has nothing been done in *Mawata* or *Neri*, and at closing the Market is quiet with only small sales.

QUOTATIONS.

Pierced Cocoons—Good to Best	\$120 to \$130
Noshi-ito—Filature, Best	150 to 160
Noshi-ito—Filature, Good	140 to 145

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
BARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
101, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 17: June 28, 1890.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS**. It is a perfectly safe and mild preparation, and especially adapted for Children. In Bottles by all Chemists. Sept. 27th, 1912.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890

NOW READY,

WITH COLOURED PLAN,

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

To be obtained at the *Japan Mail Office*, or of KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

YOKOHAMA: SATURDAY, DEC. 13, 1890.

SUMMARY OF NEWS.

THE Saitama Tramway Company has received its charter from the authorities.

H.I.H. PRINCE KOMATSU left the capital for Shizuoka Prefecture on the 6th instant.

THE Chinese Minister, who left Peking some time ago for Japan, is now at Shanghai.

HIS MAJESTY THE EMPEROR purposes to attend the sessions of the Upper House in a few days.

PRINCES YAMASHINA and KITASHIRAKAWA were present at the sitting of the Lower House on the 8th instant.

THREE lady visitors, the first to be present at a meeting of the Diet, were observed in the Lower House on the 8th instant.

THE Empress Dowager will visit the Nogakudo in Shiba Park on the 13th instant, leaving the Aoyama Palace at 8 p.m.

MR. TATENO GOZO, Envoy Extraordinary and Minister Plenipotentiary at Washington, will not leave Japan for America till February next.

IT is stated that His Majesty the Emperor intends in a day or two to depute Court Chamberlains to attend meetings of the Lower House.

THE PRINCE IMPERIAL paid a visit to the Palace on the 8th inst., at 2 p.m., and was received in audience by their Majesties the Emperor and Empress.

THE telephone exchange between Tokyo and Yokohama will be opened for public business on the 16th instant, between the hours of 7 a.m. and 10 p.m.

AT the exhibition of pictures opened in the buildings of the Japan Art Society in Ueno Park, 718 pictures were shown, of which 231 were sold at an aggregate price of yen 1,402.65.

During 40 days, from the 21st of October to the 30th of November last, 12,076 visitors were admitted.

DURING November last, the income of the Tokyo Basha Tetsudo Kaishaw was yen 13,621.56, showing a decrease of yen 2,160.68 as compared with the same month last year.

FIFTY-THREE thousand nine hundred and thirty-nine visitors, including adults and children, were registered at the Ryo-un-kaku, from the 12th of last month to the 4th inst.

MR. ASADA, Governor of Kanagawa Prefecture, entertained the members of the Kanagawa Provincial Assembly at the Chitose-ro, Sumiyoshi-cho, Yokohama, on the 9th inst.

THE number of visitors to the Botanical Gardens in the Imperial University during the last month, was 1,180, of whom 10 were foreigners, 58 special, and the rest ordinary visitors.

ACCORDING to returns forwarded from Kyushu and Kan-sei to the Sanitary Bureau of the Home Department, some 50 to 70 persons are still attacked by cholera weekly in those districts.

THE number of cremations in the capital during the month of November was 836, 64 of the persons cremated having died from epidemic diseases, and 772 from ordinary ailments.

IT is stated that the Yokohama City Assembly has all but decided to take over the present Gas Works. If this should prove true a fruitful source of ill feeling will be removed.

MR. ALEXANDER MARKS, Japanese Consul at Melbourne, Australia, has transmitted to the Government a report relating to commerce between Japan and various parts of Australia.

AN ordinary meeting of the Cabinet was held on the 9th instant, at which all the Ministers of State were present, the proceedings lasting from the forenoon till half-past four in the afternoon.

THE monthly meeting of the Chigaku Kyokai (Geological Society) will be held on the 16th instant, when addresses will be delivered by Messrs. Taguchi Ukichi and Kishida Ginko.

THE Minister President of State has addressed to the House of Representatives a statement of the Government's general policy, and the Minister of State for Finance has laid the Budget for next year before the House.

AN outbreak of fire took place in the buildings of the Normal School at Nigata Prefecture on the night of the 3rd instant, and the whole premises were entirely destroyed before the flames could be subdued.

AN extraordinary meeting of the Cabinet was held on the 8th instant, at which Counts Yamagata, Saigo, Yamada, Matsukata, Oyama, and Goto, Viscounts Aoki and Kabayama, and Messrs. Yoshikawa and Mutsu were present.

THEIR HIGHNESSES Princes Kitashirakawa and Arisugawa, Princes Sanjo, Kujo, and Tokugawa, Counts Yamagata and Yoshii, Marquises Shimatsu and Saga, Count Itagaki, Lieut.-General Tani, and other nobles had the honour of dining with the Emperor at the Palace on the 9th inst.

THE general meeting of the promoters of a Chamber of Commerce in Tokyo was held at the Tokyo Kosho Kaigisho, on the afternoon of the 6th instant, at which a petition for the esta-

blishment of a Chamber of Commerce in the capital, regulations as to the election of members of the Chamber, and the estimates of preliminary expenses were discussed.

MR. FUJITA ICHIRO sometime ago offered a copy of his work, *Nippon Keikokuron* (How to regulate the affairs of Japan), to the Emperor through Viscount Hijikata, Minister of State for the Imperial Household. His Imperial Majesty has accepted the gift.

ACCORDING to returns compiled by the Authorities, the number of persons attacked by cholera in Tokyo from the commencement of the epidemic to the 6th instant, was 3,986, resulting in 2,874 deaths, and in Osaka 8,315, resulting in 6,687 deaths.

H.I.H. PRINCE KITASHIRAKAWA entertained various Princes and Princesses of the Blood, the Ministers of State and their wives, the Ministers of Great Britain, Germany, and Belgium, and other distinguished personages at his residence on the afternoon of the 9th instant.

ACCORDING to a report to the Agricultural and Commercial Department, the quantity of sugar manufactured in Japan, during the year 1888, was 67,246,071 *kin* (one *kin* is=14lb.), valued at about yen 2,335,259, and the value of sugar imported from foreign countries into Japan during the same year was over yen 6,955,285.

THE branch office of the Nippon Yusen Kaisha at Yokohama has received a telegram to the effect that early in the morning of the 6th inst. the *Tokio Maru*, bound from Oginohama for Yokohama, in consequence of fog ran on a rock at Mirazaki, between Suzaki and Yashimazaki, of Boshu. The company at once despatched the steamship *Kii Maru* to the assistance of the *Tokio*, but latest reports hold out small hope of getting the vessel off.

A FUNERAL which is remarkable for the lavish expense connected with it took place in Tokyo on the 18th inst., when the mother of Mr. Asai Hanichichi, a leading merchant in Hatagocho, Nihonbashi, was interred at the Yeikyuchō Cemetery at Asakusa in accordance with Buddhist rites. Over four thousand persons attended the ceremonies. The extravagant expenditure of money is said to have been in accordance with the wish of the deceased lady.

STAGNATION in the Import trade continues, and no great change can be looked forward to until the new year comes, and even then the prospects are not entrancing. Nothing has been done in Yarns or Piece-goods worth reporting, and the same may be said of Metals and Kerosene. There appears to be no market for Sugar, though there is usually some demand just at the end of the year. The Silk trade has been more active, and 1,000 piculs have been taken. Notwithstanding that arrivals have been small, the stock is not much reduced, and from present appearances a larger quantity of Silk will be carried over into next year than has ever before been the case in the history of the trade in Japan. This is mainly due to the fact that a large portion of the stock belongs to wealthy Japanese in the interior who do not need to borrow from the banks; indeed, some of the strongest holders have been heard to aver that "silk is better than money," and these will be pretty sure to hold on unless an extraordinary change takes place in the market. Waste Silk has been dealt in. There has been a little business in Tea. Exchange has fluctuated, but not violently; rates, however, are decidedly unsteady.

EDITORIAL NOTES.

IMPERIAL JAPANESE DIET PROCEEDINGS.

We regard the proceedings of the Diet as the most important chapter of Japan's modern history, and we therefore propose to publish them verbatim in these columns. But as neither our space nor our resources permit us to keep the verbatim report up to date, and as it seems expedient that our readers should be informed as speedily as possible of the general results of each sitting, we shall in future give separate summaries taken from the vernacular press, reserving the verbatim reports for publication, when opportunity offers. In pursuance of this programme, we now summarize the proceedings, commencing from Saturday, the 6th instant, and publishing elsewhere a verbatim export of the important debate on the 4th instant:—

HOUSE OF PEERS.—DEC. 6.

The House of Peers commenced its sitting on the 6th inst. at fifty minutes past five. The President reported to the House the appointment of the following members as Presidents and Vice-Presidents of the Permanent Committees:—

- Mr. Mitsukuri Rinsho, President of the Qualifications Committee.
- Mr. Ozaki Saburo, Vice-President of the Qualifications Committee.
- Mr. Tani Kanju, President of the Finance Committee.
- Mr. Hosokawa Junjiro, Vice-President of the Finance Committee.
- Viscount Kurada Kiyotsuna, President of the Disciplinary Committee.
- Mr. Obata Miine, Vice-President of the Disciplinary Committee.
- Marquis Hachisuka Mochiaki, President of the Petitions Committee.
- Marquis Nabeshima Naohiro, Vice-President of the Petitions Committee.

The President then announced that there was a question of informal election with reference to the member of the House of the Peers from Wakayama Prefecture, and it had been entrusted to the Qualifications Committee. Leave of absence to Marquis Shotai (of Okinawa Prefecture) on account of illness was granted without any objection. Mr. Mutsu, Minister of Commerce and Industry, addressed the House as the Government Delegate to explain the Bill of Weights and Measures. He first pointed out that the system of weights and measures was as important as the system of coinage, and then proceeded to note various errors and inconveniences of the system now in force. Finally, he gave a full account of the proposed system, and showed that it was based on the metrical system, and that the nomenclature now in use was to be kept. Mr. Shigeno supported the Bill. Marquis Nakayama then proposed that a Special Committee should be appointed to consider the Bill and that such appointment be left to the President. Three or four members seconded the proposition, and though not announced by the President, it became a subject of debate. At this stage, Mr. Murata Mamotsu asked the President how he proposed to manage the prescribed business of the House if this question were suffered to be discussed, and said that he did not consider it a subject for debate. This seemed to perplex the President a little, but with his usual tact he put the point aside without causing any friction. Meanwhile, the discussion of the right to put questions to the Delegate was again revived. Viscount Torio opened the debate, and maintained that the members of the House had a right to put questions, whereupon Mr. Yamaguchi made a speech in opposition. Mr. Kato and Mr. Shimauchi also spoke in favour of the right of questioning. This discussion, carried on in an animated manner, took some time, and ultimately the regular routine of business was resumed. The President put the motion of Marquis Nakayama to the House, and it was carried by a majority. The motion of Viscount Torio as to the right of questioning the Government Delegates was, by a resolution of the House, postponed to the next meeting. After a recess, the members resumed their seats and the President appointed the following members

as the Special Committee, and desired them to elect their President:—Professor Kikuchi, Professor Faruichi, Dr. Nagayo, General Ozawa, Admiral Yanagi, Viscount Naito, Mr. Yamaguchi (Naoyoshi), Mr. Yuri Kimmasa, Mr. Hara Tadayori.

HOUSE OF REPRESENTATIVES.—DEC. 6.

The House of Representatives commenced its sitting at 8 minutes past one o'clock on the 6th instant. The business of the House was, first, the first reading of the Poor-law Bill; secondly, the appointment of a special committee to be entrusted with the examination of that Bill. The President, stating that he had a few matters to report to the House before opening the debate, proceeded to announce that Count Yamagata, the Minister President of State, and Count Matsukata, the Minister of Finance, would address the House with reference to the course of administration to be pursued by the Government, and to the Budget, respectively. Thereupon, Count Yamagata ascended the platform and delivered an address which occupied some thirty minutes, and of which a translation appears elsewhere in our columns. Count Matsukata then spoke. We publish his speech elsewhere. When he descended from the platform, Mr. Kawashima, premising that he had to ask some explanations with reference to the speech just made by Count Matsukata, said that he understood the general bearing of the explanation given by Count Matsukata in respect of the Budget, but he regretted that it was not fuller. He well knew that the Government financiers, since the Restoration, had had an arduous task to discharge on account of the national affairs having been so complicated, especially in the 10th year of Meiji, a period which produced an extraordinary effect on the finances of the empire. But at the same time, those entrusted with the charge of the country's finances are bound to devise remedial measures, and even before the Constitution was established, were morally responsible for the financial condition of the empire. He then dwelt on the draft estimates hitherto prepared by the Government which he said, although cleverly prepared to balance well, always differed from the final accounts, in most cases the latter much exceeding the former, and consequently he apprehended that although the estimate for this year presents a satisfactory appearance, as for instance a surplus of several million yen, in the actual result the amount of the settled account may be found to exceed the estimates. He desired therefore, to have a fuller explanation as to how the differences between the estimated amounts and settled amounts used to occur, as well as how the present estimates were prepared in that respect. (Here several members called out "Unnecessary, unnecessary.") Count Matsukata again ascended the platform and said that Mr. Kawashima's question, having reference to the relation between the estimates and the settled accounts, must be put to the Bureau of Audit, which deals with such matters. He should not attempt to answer the question then and there. The President announced a recess, and the House rose at 2 p.m. At half-past 2 the House assembled again. The President announced that the House would proceed to the first reading of the Poor-law Bill, according to Art. 89 of the Rules of Procedure. Mr. Shirane Senichi, Vice-Minister of Home Affairs, addressed the House as Delegate of the Government. The duty of relieving the poor was, he explained, in the time of the Tokugawa administration, left in certain cases entirely to private individuals, but since the 9th year of Meiji the Government had taken measures to assist the helpless poor. However, this was to a very limited extent. It did not suffice to relieve the numerous indigent folks almost driven to starvation, the only resource being the Famine Relief Funds. The speaker entered into an explanation of the different resources now existing for helping the poor, showing their inadequacy, and concluding by saying that though laws for aiding the poor might be productive of great evils, the principal object of the proposed law was to render help to those who were really needy, with due precautions against

the abuse of extending aid to persons who did not honestly require it. Messrs. Shimizu Sanzo, Amano Saburo, and Watanabe Osamu successively asked for explanations with respect to different articles contained in the Bill. The President asked the Delegate whether he was ready to answer these questions. The Delegate said he should not answer the questions put article by article, but would make a full statement in Committee. Mr. Ishida Kanno-suke said it was the Delegate's duty to answer the questions put with respect to different articles. The President remarked that, as this was the first reading, it was perhaps better not to ask for detailed explanations. Upon this Mr. Kikuchi Kwaji rose and said that the official who was responsible for the explanation of a Bill ought to answer questions put by members. If the Delegate persisted in his refusal, it would be necessary to make a representation to the Government, as this would constitute a precedent for future guidance. The Delegate said he would not hesitate to answer any important questions. But he desired the members as a rule to accept his first explanations. He did not, however, mean to refuse to give any explanations sought. The President put the question to the House whether the Delegate should be required to give the explanations, and the House voted that he ought to answer. The Delegate then stated, in answer to the question whether this Bill would go hand-in-hand with the system of *Shichosensei* (Local Government) that the duty of investigating the degree of poverty of the poor to be relieved would rest with the local authorities, but the manner of giving aid would be fixed by the Bill. Mr. Watanabe Osamu asked whether the Bill was destined to render immediate aid at present, or whether it was to go into operation with the new system of local government. The Delegate stated that it was intended for future operation. Several other questions put by Messrs. Hayakawa Rinsuke, Suyehiro Shigeyasu, Okada Riochiro, &c., as to the scope and extent of the influence of the law, were answered by the Delegate. After some discussion, a motion made by Mr. Kikuchi Kwanji that the Government should be asked for explanations refused by the Delegate was withdrawn. Passing to the election of the special committee, Mr. Suyematsu Kencho moved that at the time of announcing the business of the House or in reporting the result of an election to the House, a rule be made to the effect that the presence of the prescribed number of members was unnecessary. Mr. Horituchi Chuishi and Mr. Sato Riji moved that the election of the special committee be made in each section according to Art. 63 of the Rules. Mr. Nagata Sadayemon moved that the examination of the ballots for the special committee be conducted simultaneously in three places in the House so as to save time. After some discussion, these motions were put to the House but failed to obtain a majority. Accordingly, the balloting for the special committee was commenced and ended by half-past four. By that time, many of the members had left the House, and the President stated that as so many members were absent, he should seal the ballot box in the presence of those in the House, and keep it under his control till the next day when it should be opened. This was put to the House and carried. The President then announced the business of the House for the next day, and also that he had received a communication from the Minister of Justice with reference to the application made by the House. The members present all desiring to hear the communication, it was read as follows:

"To Mr. Nakajima Nobuyuki, President of the House of Representatives.

I have only authority, according to the Constitution, to give force to the decrees of the Judiciary. I have no authority to stop a criminal prosecution already commenced. Whether with or without the consent of any other section of the body politic, I cannot interfere with any process arising out of the due exercise of the judicial power. Therefore I am not in a position to concern myself in any way about the resolution of the House.

(Signed) Count YAMADA AKIYOSHI,
Minister of State.

Dated 6th December, 23rd year of Meiji.

HOUSE OF PEERS.—DEC. 8.

The business before the House of Peers on the 8th December was, (1) motion by Mr. Watari Masamoto for the appointment of a Committee to amend the entire body of the Rules of the House of Peers; (2) motion by Mr. Ozaki Saburo for the appointment of four groups of special Committees. The House assembled at fifteen minutes past 10 a.m. when Counts Oyama, Matsukata, and Awoki were present. The President announced that among the members of the special Committee for examination of the Bill of Weights and Measures Viscount Yuri had been elected as President and General Ozawa as Vice-President. The question of whether the special Committee for the examination of the Barristers' Bill should be allowed to hold its meetings during the hours of the House's session, was referred to the House and decided in the affirmative without a division. Mr. Watari Masamoto then proceeded to explain his proposal. He stated that the Rules of the House had been drafted after the Rules of Upper Houses in European countries, and had been submitted for inspection by the Conference Committee of the different sections of the House. Ultimately the Committee submitted the draft Rules to the House, and suggested that as the Rules were of urgent necessity their reading should be omitted, and a resolution should be passed on the whole body and not on the separate articles. The proposition had been carried by a majority. It resulted that the Rules were not perfect; were unfit indeed to be permanently observed by the House. The speaker could cite many points requiring to be changed, but would not go into them for fear of trespassing upon the time of the House. He desired to have a committee appointed for amending the entire body of the Rules of the House, carefully and gradually employing their spare hours for the purpose; and that three members from each section should be elected, so as to form a committee of 27. Marquis Hachisuka approved the motion in the main, but did not consider that the amendments to be made were of such great extent or that it would be necessary for the committee to be engaged in the work of revision during the whole period of this session. Admiral Yanagi said he agreed with the mover's idea of appointing a committee of revision, but considered that it was too early yet to commence the work as there had scarcely yet been time to see how the rules worked. He desired to postpone the carrying out of the proposal for a month or so. Baron Watanabe Kiyoshi said he seconded the motion, and considered it very necessary to have it put to the House. Otherwise the subject could not, according to the present rules, be brought forward again during this session. He agreed with Marquis Hachisuka in respect of the time to be allowed to the Committee, but thought the number suggested by the mover was too great, and should be made nine instead of twenty-seven. Mr. Watanabe Ki seconded the motion. Mr. Ozaki Saburo said he approved of the motion, but desired to make an addition to it to the effect that the appointed Committee should have power to hold conferences with the House of Representatives so as to obviate differences of opinions between the two Houses hereafter, whenever matters requiring conferences of the Houses should occur. He was also of opinion that the Committee should consist of nine members elected by the House. Mr. Yamaguchi said he supported the motion and thought it should be put to the vote without further discussion, but he considered the appointment of the Committee at the present moment premature, and desired to postpone it until a future occasion, say a month or so hence. Barons Senke and Nishi-itsutsuji supported Mr. Yamaguchi. Viscount Torio also spoke at length, stating that there was not any urgent necessity for appointing the Committee. The House took a recess and resumed its proceedings at one o'clock. Baron Komatsu Yukimasa supported the motion, but would have the number of the Committee limited to nine, and would leave the appointment to the President, accord-

ing to the Second Clause of Art. 36 of the House Rules. Mr. Shimanouchi Takeshige also made a speech in support of the motion. Mr. Miura Yasushi dwelt at great length on the Fifty-sixth Article of the Rules, which had been already much discussed by the members. Viscount Tani Kanjo also supported the motion, and Mr. Watari having further explained his proposal, the President announced that a vote would be taken. The President then called upon those who agreed with Admiral Yanagi in thinking that the appointment of the committee was premature, to stand up, and the result was a minority. In the next place, Mr. Watari's motion to appoint a committee was put and carried by a majority. As to the number of members of committee, the President put aside the motion to elect three members out of each Section of the House as being against the Rules, and asked those who agreed with Mr. Ozaki in fixing the number at nine to stand up. This was carried by a majority. Some discussion then followed as to the method of electing the committee, and it was finally resolved to leave the appointment to the nomination of the president. Proceeding to the next business before the House, Mr. Ozaki Saburo read the following motion:—

"At the beginning of every session a permanent Committee, consisting of the following four sections, shall be appointed for the purposes mentioned:—

Committee for Home affairs, consisting of nine members, who should examine Bills relating to Home Affairs, Communications, Education and so forth.

Committee for Finance consisting of nine members, who should examine Bills relating to financial affairs, commercial and industrial affairs, &c.

Committee for Judicial affairs, consisting of nine members, who should examine Bills relating to Judicial affairs, civil laws, criminal laws, legal proceedings, commercial laws, &c.

Committee for Military Affairs, consisting of nine members who should examine Bills relating to the Army, the Navy, and Foreign Affairs.

He spoke at length in explanation of the object of his motion, saying it was much better to have a standing Committee established so as to be ready for discussing the Bills produced before the House than to appoint Special Committees after receiving the Bills. Marquis Hachisuka, Viscount Sakai, Viscount Tani, and several others opposed the motion. After Mr. Ozaki had spoken again, the motion was put to the House and lost. At thirty-five minutes past three, the House adjourned, and after a few moments reassembled, when the President announced that he nominated the following members as a Committee to amend the Rules:—Mr. Watarai Masamoto, Mr. Murata Tamotsu, Mr. Ozaki Saburo, Mr. Miura Yasushi, Mr. Ito Miyoji, Mr. Kaneko Kentaro, Mr. Hanao Shin, Marquis Nabeshima, Mr. Takiguchi. The proceedings for the day then ended. The House of Peers will not meet again until notice is given by the President.

HOUSE OF REPRESENTATIVES.—DEC. 8.

The business before the House of Representatives on the 8th of December was:—(1.) To open the ballot-box for the election of a Special Committee in connection with the Mori Tokinosuke affair: (2.) To elect a special committee to inquire into the objections raised by Messrs. Arai Shogo, Yamada Toji, and Arai Go as to the qualification of Mr. Akamatsu Shinyemon, member of the House for the 4th section of Ibaraki Prefecture: (3.) A motion by Mr. Ozaki Yukio that "the Government Delegates shall be responsible for their speeches and shall be invested with absolute authority to represent the opinions of the Cabinet or of the Ministers of State in whose stead they attend." The House assembled at fifteen minutes past 1 o'clock p.m. The President stated that the Committee on the Estimates had requested to be allowed to continue their investigations even during the hours of sitting of the House, otherwise it would be impossible for them to finish their task within the fifteen days allotted. He asked the House whether the request should be granted. Mr. Yasuda Yutsumi made an objection, but the President, ruling that the sense of the House should be taken without debating, asked those who were in favour of the motion to stand up.

It was carried by a majority and the Committee on the Estimates withdrew. Proceeding to the question of opening the ballot-box for the election of special committees, Mr. Yokohori proposed that to save time spent in examining the ballots, the examination should be conducted in two or three divisions simultaneously and such divisions should be left to the President to make. Mr. Horikoshi and Mr. Sasaki seconding this, it became a motion, and Messrs. Shimada (Takayuki) and Orita opposed it. Meanwhile, cries of "Divide" being uttered in different places, the President put the proposition to the House, but only a minority rose. The box was thereupon opened and 271 ballots were found. The Vice-President, Mr. Tsuda, taking the chair, announced the following result:—

Mr. Suehiro Shigeyasu	99
Mr. Koriisune Makaji	91
Mr. Tachibana Kiichi	87
Mr. Imai Isotchiro	84
Mr. Yasuda Kun	80
Mr. Tamura Koremasa	79
Mr. Kitagawa Kiichi	76
Mr. Amahara Fumie	73
Mr. Inouye Kakugoro	73

The House took a recess at 4.50 p.m. and assembled again at 5.30 p.m. The President stated that an alteration was required in the prescribed business of the House for the day, on account of an application of leave of absence by Mr. Matsuyama Moriyoshi, and there being no objection raised, it was passed without a discussion. Passing to the second business of the day, Mr. Higashi Heita proposed that the matter of examining into the qualifications of Mr. Nagata should be entrusted to the special Committee previously elected for a similar purpose. After some discussion, this was made a motion, being seconded by Mr. Tominaga Hayata, but Mr. Misaki Kamenosuke opposed it on the ground that entrusting this to a Committee previously elected would amount to converting the latter into a standing Committee. But as his proposition, previously made, for appointing a standing Committee to investigate qualifications was not disapproved of by the House, there was no reason for allowing the proposition, however, convenient it might be.—(Cries of "Divide.") The President put the motion to the House, but it was not carried. Mr. Matsumoto Tei proposed that the election of the special committees should be left to the different sections of the House, according to the second clause of Art. 63 of the Rules of Procedure, as the results of the previous two elections had not been entirely satisfactory, the dignity of the House thereby suffering and valuable time being lost. Seconded by Mr. Tachiishi Kwan, this resolution was put and carried by a large majority. Thereupon, after the business of the House for the next day had been announced, the House rose at fifty minutes past five. The result of the election of the Qualifications Committee by the different sections was as follows:—

1st Section.—Mr. Okayama Kaneichii.
2nd Section.—Mr. Oyagi Bitchiro.
3rd Section.—Mr. Takanashi Teishiro.
4th Section.—Mr. Miyagi Kozo.
5th Section.—Mr. Kusunoto Masataka.
6th Section.—Mr. Hasegawa Tai.
7th Section.—Mr. Tanaka Gentaro.
8th Section.—Mr. Motoda Hajime.
9th Section.—Mr. Yoda Sajitsei.

Dec. 9.

The House met at 1.15 p.m. The President, having announced the names of the members elected to form the Qualifications Committee, declared the debate open for Mr. Ozaki Yukio's motion, namely, that the Government's Delegates shall be regarded as representing the whole Government, and that their qualifications must be fixed. He explained that if the Delegates were to be considered as representing only one Department or one Bureau, various anomalies would be present when the joint responsibility of the Cabinet came to be inevitable. Further, the Delegates must be members of the Government (*seifu-kan*). At present, the distinction between members of the Government and executive officials (*jimu-kan*) is not clearly established in Japan, so that this point could

scarcely be insisted on, but if the House decided that the Delegates should represent the whole Government, it was plain that they must not be officials of low rank. That would be derogatory to the House. Consequently, the best plan seemed to be a ruling that the Delegates must be at least of the rank of Vice-Ministers of State, and that, according to circumstances, a Minister of State himself must attend as the Government's representative. Mr. Ama No-saburo said that, that so far as concerned the question of the Government's Delegates representing the whole Government, there could be no doubt that they did already possess that qualification, and that no occasion existed for the House to formulate any decision on the subject. Mr. Takagi Masatoshi supported the resolution. He thought that a clear understanding should exist as to the fact that the delegates represented the whole Cabinet. Thus, if in respect to the Budget, for example, any mistake were made, the Government, and not the Department of Finance alone, would be responsible. Mr. Suyematsu Saburo opposed the motion altogether. He saw no reason for asking the House to decide such a question. They might speak of having Government Delegates of the rank of Vice-Ministers at least, but the truth was that whatever the rank of an official, for the purposes of the House he was simply the Government's Delegate, neither more nor less. He represented the whole Government. The House regarded him already in that light, and was not called upon to formulate any decision on the subject. Mr. Noguchi Kei said he should vote for the proposition. Mr. Kokure Budayu approved of the spirit of the proposition, and thought that some general definition of the limits of the Delegates' power should be given. He thought, however, that the proposition was too detailed, and the House must of necessity regard Government Delegates as representatives of the whole Government. Mr. Yasuda Yuitsu also agreed with the motion from a general point of view, but objected to its form. The Delegates must of course be individually and collectively responsible, and must be regarded as appearing on behalf of the whole Cabinet. It was clear from the provisions of the Laws of the Houses that a Delegate came before them as the whole Government's representative. He regarded this proposition as the first step towards establishing the principle of the Cabinet's joint responsibility. Mr. Orita Kenshi agreed with the motive of the motion, but did not see any occasion for the House to give a decision. The Delegates of the Government did not come before the House as exponents of the Government's general purpose or policy, but only in connection with some special measure. In regard to that measure they were of course responsible, and equally of course their responsibility extended to the Government. The House was not called on to consider the question. Mr. Ishida Kamosuke said that in the Local Assemblies numerous instances existed of a Prefect being held responsible for the mistakes of his representative. If mistakes were made by a Government Delegate in this House, how would the House proceed? The other day Vice-Minister Shirane attended and gave explanations of a Bill in the capacity of Delegate, but said that his explanation was only of a general nature, and that, in regard to details, the Government had ideas of its own. In view of such an unsatisfactory statement, he thought that the fact of responsibility should be clearly defined. Mr. Watanabe Osamu agreed with the principle of the proposition, but objected to its being brought before the House as a motion. He thought that such a course was injurious to the dignity of the House, for in the Constitution itself mention was made of Ministers of State and Government Delegates, both being regarded as of the same rank. There was no reason, then, to establish this fact by the process of a motion. It would be like voting that white is white. Examples had been cited from Local Assemblies, but Local Assemblies had their own methods. This was the Imperial Diet. It had nothing to do with Local Assemblies. Somebody had

spoken also of collective responsibility. That was not a practical but a political consideration. To make such a point betrayed ignorance of the difference between individual responsibility and collective responsibility. Mr. Nakashima Jun supported the motion. He thought that the responsibility of Ministers of State towards the Emperor and their responsibility towards the Diet should be settled. Mr. Kobayashi Jinno-suke said that the responsibility of the present Cabinet was not collective. In ordinary language it might be called unlimited. There was no occasion for the House to vote. The President put it to the House whether the motion should be proceeded with, and a majority voted in the negative. The President then announced that the House would proceed to the next business, Mr. Shimada Saburo's motion. Mr. Shimada explained that the objects of his motion were to ascertain the views of the House with regard to the answer received from the Minister of State for Justice, and to adopt measures for guarding the reputation and interests of the House hereafter. In reply to an application sent by the House's Committee, the Minister of State for Justice had declared that he had no authority to interfere with a matter lying within the sphere of the Judiciary's power—namely, a matter which had already been decided by a Court of Law—and that, consequently, the resolution of the House did not concern him. What did the House propose to do about this? There were disputes about the meaning of the word arrest as interpreted according to the letter and according to the spirit of the Constitution, but the House had come to a decision, and it behooved them now to determine what value attached to their decision. He thought that a Special Committee should be appointed to formulate some decision, which decision ought to be submitted for the consideration of the House, in order to serve for future guidance. It must be determined whether the term "arrest" used in the Constitution was to be interpreted by the actual language employed or by the spirit of the charter. He believed that it should be interpreted according to the spirit, and that arrest should be taken to mean not only the act of seizure but also detention. This, however, was only his individual opinion. If a Committee were appointed to investigate the matter thoroughly, a clear argument would doubtless be prepared, and full subsequent discussion by the House would lead to a final conclusion. Mr. Yenki Shoji enquired what was the object of the decision of a Committee, and Mr. Shimada answered that it was one plan of procedure unless the House had a better to propose. Mr. Kusumoto Masataka said that the House had already pronounced its decision in favour of interpreting the 53rd Article of the Constitution according to its spirit. But the Minister of State for Justice had refused to assent. The House had considered three or four motions with regard to the interpretation of the 53rd Article, and although there had been differences of opinion, a decision had been come to. That decision must be respected. Under these circumstances the appointment of a Committee as now proposed seemed an extravagant idea, and could serve no good purpose. However often the question might be put to the House, the decision would be the same, and there was no occasion for further inquiry. A decision once come to by the majority of the House must be respected by the whole House, and the only course now remaining was to appeal to the Throne. He thought that the Emperor must be asked to decide whether the interpretation of the Minister of State for Justice or that of the House was correct. Mr. Takata Sanaye was in favour of the motion. In a matter of such gravity he thought that the fullest investigation should be made, and that the sense of the whole House should be calmly taken. Nothing would be lost by delay. Mr. Nishino Denzo agreed with Mr. Kusumoto. A decision once arrived at must not be altered. They must abide by it to the end, and approach the Throne through their President. Mr. Fujita Mokichi said there were two questions now be-

fore the House: first, whether an appeal should be made to the Throne; secondly, whether grave deliberation should be held before making such an appeal. He was strongly of opinion that grave deliberation should be held. Mr. Misaki Kamenosuke said that, with regard to the reply sent by the Minister of Justice, he wished to know what objection the Minister had made. He was unable to see that the Minister had expressed any opinion opposed to the resolution of the House. He had merely replied that he could not take action with respect to it. There was therefore no question of the interpretation of the Constitution, nor did he see that they needed to re-open a debate which had already been held. He moved as an amendment that the House should proceed to appoint the Qualifications Committee. Mr. Seki Naohiko said that he had not agreed with the decision come to by the House on this subject, but that a decision having been arrived at, they had only to abide by it. But to appeal to the Throne on the strength of that decision seemed to him a rather precipitate proceeding, and one which might expose the Diet to criticism. He was therefore in favour of the proposal for a Committee. When the views of the House had been fully determined, further steps could be taken. He begged the members to observe that an appeal to the Throne at the very outset of the Diet's career, was a proceeding to be gravely considered. He thought the House itself should settle this business. Mr. Ooka Ikuzo dissented from the views of the mover of the resolution. The latter did not seem to know his own mind. He had said "unless there is some better plan." Such vagueness was perplexing. There were two courses to be chosen between. An immediate appeal to the Throne seemed very precipitate. The other day when a question of election was before the House it was first decided that the election should be made by the whole House, and the next day it was decided that it should be by Sections. He recommended that the House should be thoroughly assured of its own intentions, and that the greatest deliberation should be observed in this matter. Mr. Miyagi Kozo asked in what law or in what Constitution the idea of lightly appealing to the Throne was to be found. If the precedent of appealing to the Throne about such a question as this were to be established, the House would incur the reproach of usurping the power of the Judiciary and detracting from its own dignity. He thought the project of appealing to the Throne should be maturely considered. Mr. Aikawa Kintaro said that if it came to a question between the decision of the House and the provisions of the Constitution, the Constitution was undoubtedly the more weighty. This decision of theirs was opposed to the Constitution and had better not be acted upon. Mr. Motoda Hajime said that he had been disposed at first to endorse Mr. Kusumoto's proposal of an appeal to the Throne, but that on reflection he remembered that this is the House's first session. To carry such a question at once to the Emperor would show a want of moderation. He thought the interests of the country would be better served by giving effect to their decision at some future date. Therefore he approved of Mr. Shimada's suggestion. Mr. Itakura Naka opposed the motion, and agreed with Mr. Misaki. He found the idea of a committee very strange. Such a course would detract from the importance of the House's decision. A decision of the House included the idea that steps should be taken to give it effect. To appoint a Committee for the purpose of investigating the matter again would be to disturb the decision of the House. Therefore he should vote for appealing to the Emperor. It was absurd to talk of renewed investigation for the purpose of appeal to the Throne. All that need be done was to lay the decision of the House before the Emperor and ask for his approval. Mr. Arai Shozo could not clearly understand the purpose of a Committee. He wished to put three questions to the mover of the proposition. Was the Committee intended to make a reply to the document received from the

Minister of State for Justice? Or was the Committee to carry the thing through to the end? Or was it to give a decision as to the question of appealing to the Throne. Mr. Shimada answered that the intention of the Committee was to assist the House in adopting a wise policy and taking prudent steps with regard to this subject. A member here moved the closure of the debate, and the House supported him. The President announced that he should proceed to put the amendments first. Mr. Misaki's amendment would therefore be put to the vote at once and after it the original proposition. Mr. Ooka opposed this, and asked what should then become of Mr. Aikawa's amendment. Three or four members also stood up and put questions to the President. The President announced that, in accordance with the 126th Rule, he proceeded to put Mr. Misaki's amendment. On the supporters of the amendment being asked to stand, the House appeared to be equally divided and voting by black and white balls was resorted to. Out of 240 members present, 124 voted for Mr. Misaki's amendment and 116 for Mr. Shimada's proposition. Mr. Suzuki Shoji wished to say a word about the Orders of the Day in connection with Mr. Shimada's motion, but the President ruled him out of order as the decision of the House had been taken. Mr. Kanmura proposed that the Qualifications Committee should be nominated by the President. Mr. Itakura Naka was in favour of election by Sections. The question being put to the House, the majority voted in favour of election by Sections. Mr. Suzuki Shoji asked permission to address the House, but as this would have been contrary to the Orders of the Day, the President declined to allow him. The Sections then proceeded to elect a Committee, and the President having announced the business for the next day, the House rose at 5.25 p.m.

Dec. 10.

Business before the House:—(1) First reading of a Bill relating to additional Special Ports of Export. (2) Election of a committee to be entrusted with the examination of the above mentioned Bill. The House assembled at twenty-five minutes past one o'clock. The President announced the names of the special Committee elected in the different Sections of the House on the 9th instant, as follow:—Messrs. Sugita Sadaichi, Matsuda Masahisa, Shida Okuzo, Suyematsu Saburo, Gamo Sen, Kono Hironaka, Sakurai Tokutaro, Suyehiro Shigeyasu, Ooka Ikuzo. It was also announced by the President that a notice had been received from the Government informing the House that Mr. Saito Shuichiro, Chief of the Bureaux of Agriculture and Public Works in the Noshomusho, had been appointed Delegate for the Weights and Measures Bill; and that Mr. Chiba Teitaro, one of the members for Chiba Prefecture, who appeared to take his seat, had been admitted as properly qualified. A motion for amending the Copyright Regulations (*Hanken Jorei*), by Mr. Suyematsu Kencho, and a motion for abolishing the Peace Preservation Regulations, by Mr. Kato Heishiro, had been handed in on the 8th and 9th instant respectively. Mr. Ooka Ikuzo stated that he felt much honoured by being elected from the 9th section, in spite of his being in the 6th, but as he was opposed to the appointment of the Committee and therefore could be of little assistance to it, he desired to decline the appointment. He was requested by the President to submit his resignation in writing. Proceeding to the business of the day, a secretary read the Bill relating to additional Ports of Export. Mr. Watanabe Kunitake, Vice-Minister of Finance, as Government Delegate, made the following explanatory remarks:—The staple to be exported from the part of Kushiro is, as mentioned in the explanatory document, sulphur. According to last year's statistics, the amount of sulphur exported from Hakodate was 24,227,080 *kin* (catties), valued at 220,045 *yen*. It was shipped for San Francisco, New York, Canada, and various places in South America. The direct export of sulphur from the port of Kushiro, instead of shipping it from Hakodate, which is some two hundred *ri* (500 miles) away from the

places of production, would save a sum of 52,000 *yen* in the cost of transportation, warehousing, &c., and would greatly encourage production on account of the Kushiro port being so close to the localities of Nemuro and Kushiro, which are the principal sources of sulphur in Hokkaido, and the output of which already shows a tendency to gradual increase. Mr. Amano Saburo said that according to the explanatory document, it appeared to be in contemplation to admit foreign ships to Kushiro for purposes of exportation. He asked whether the foreign ships mentioned were intended to include war ships, and whether the opening of this port had anything to do with Russian and Japanese relations. Mr. Watanabe answered that Japanese subjects only were to be allowed to export from Kushiro, sending the exports in foreign bottoms chartered by Japanese. War ships were of course not included, nor had the project any connection with Russian affairs. Mr. Sasaki Shuzo asked whether the opening of the port for export would not produce an injurious effect on the general commerce of the country, and was answered in the negative. Mr. Suyehiro Shigeyasu thought that occasion seemed likely to arise for opening some more special export ports, in addition to the nine ports at present open. He asked whether the Government thought it sufficient to open Kushiro, or whether preparations were in progress to open more harbours. Mr. Watanabe answered that the Government considered it quite enough at present to open this one port. Mr. Yokobori Sanshi asked whether the quantity and value of sulphur mentioned in the explanatory document referred to the export from Hakodate alone, and if so, what amount was expected to be exported from Kushiro. Mr. Watanabe answered that the amount mentioned in the document represented the whole export from Hakodate. The sulphur, however, came almost entirely from the localities of Nemuro and Kushiro, and by making Kushiro a place of shipment, it was expected that the export would be increased probably 130,000 *kin* per annum. The Delegate added that the sum of 52,000 *yen* mentioned in the explanatory document had been calculated by taking this increased export into consideration. Mr. Ota Minoru enquired what expenses would be incurred for custom inspection, &c., in opening the new port. Mr. Watanabe said that the expenses for the Customs office to be established there were estimated at 597.02 *yen*. Mr. Nishiwo Denzo asked whether Kushiro was a dangerous harbour, as he had been told; also whether no exportation took place from the port of Otaru, and whether coal was not expected to form a part of the exports. Mr. Watanabe said he did not himself know whether or no Kushiro was a dangerous harbour, but the Local Government of Hokkaido reported it to be safe and tranquil, and a good anchorage for merchant ships whether of Japanese or foreign build. Some exportation, he said, might have been made from Otaru, but at any rate for exports to America the shortest way was from Kushiro. As to the nature of the exports, the Government had sulphur chiefly in view, in opening the port, though rice, wheat, coal, and so forth might also come to be ultimately shipped thence. Mr. Jiumonji Shinsuke asked whether there was any expectation of the Japanese making direct exports if this port was opened and, was curtly answered "There is," in reply which provoked some laughter in the House. The President announced that the explanations required having been given, the Committee for examining the Bill would now be appointed. Some discussion here arose, but Mr. Tominaga Hayata's motion for electing the committee from and in the Sections was carried by a majority. The House rose at 1.50 p.m. and re-assembled at 3 p.m. The President reported the result of the election of the Committee as follows:—

- 1st Section.—Mr. Hayashi Koichiro.
- 2nd Section.—Mr. Ito Sukekata.
- 3rd Section.—Mr. Higashino Heitaro.
- 4th Section.—Mr. Usami Harusaburo.
- 5th Section.—Mr. Hayakawa Riusuke.
- 6th Section.—Mr. Sasaki Shozo.
- 7th Section.—Mr. Kawagoye Susumu.

8th Section.—Mr. Kato Rokuzo.

9th Section.—Mr. Suzuki Shigeto.

The President stated that Mr. Ooka Ikuzo, who had been chosen a member of the Committee to investigate matters connected with the answer received from the Minister of Justice, had tendered his resignation, whereupon Mr. Takatsu Nakajiro asked for the reason of such resignation. Mr. Ooka Ikuzo ascended the rostrum, and stated as his reason for resigning that he did not agree with the resolution of the House based on its construction of Art. 53 of the Constitution, and consequently he could not conscientiously work with a Committee appointed to give effect to the resolution. Besides, the question concerned the dignity of the House, and it was very important that it should be properly dealt with, but he was unable, under the circumstances, to act with vigour, and he considered that the maker of the motion and his supporters were the proper persons to undertake the task. Mr. Hashimoto Kintaro objected to this on the ground that Mr. Ooka's reason was not satisfactory, inasmuch as it involved disregard of the principle that he belonged to a collective body, and should be bound by the decision of its majority without regard to his own opinion. Moreover, to admit such a ground of resignation would be to establish a dangerous precedent. Members would thenceforth be able to decline serving as committee-men on the plea that they individually differed from the purpose of the committee's appointment. The President called upon those who were prepared to accept Mr. Ooka's resignation to stand up, but only a minority rose. Then calling upon those opposed to acceptance, the President announced that by the view of the majority Mr. Ooka's application to resign his appointment had been refused. The House rose at 3.25 p.m. after the business for the next day had been announced by the President.

Dec. 11.

The House assembled at eighteen minutes past one o'clock. The President announced that Mr. Arai Shozo and thirty-nine other members, according to the 46th Article of the Rules of the House, had presented a written series of interrogations addressed to Count Yamagata, Minister President of State, with regard to the policy contemplated by the Government in the following matters, namely, Education, Industries, the Army and Navy, and the Revision of Treaties; that Mr. Inouye Kokaku had handed in an application for leave of absence until the 20th inst., on the ground of illness; and that Mr. Nagai Matsuyemon had given notice of a motion for the postponement of the time of putting into force the Commercial Code, and Mr. Yamada Toji a motion for rescinding some parts of the Rules of the House. Mr. Suyehiro Shigeyasu desired that the Committee for the Poor Laws Bill should be allowed to leave the Chamber and hold its meeting at once, and this being put to the House was carried by a majority. Proceeding to the business of the day, the motion by Mr. Aoki Tadasu was read, proposing the appointment of a special committee to draw up regulations for conducting business between the two Houses of the Diet. Mr. Aoki explained the object of his motion. He expressed the belief that there would be no discussion as to the appointment of such a committee. He wished to explain that it was essential to have the committee appointed at once. The motion directly concerned both the 61st Article of the Law of the Houses and the 223rd Article of the Rules of the House of Representatives. The Law of the Houses provided for the relations between the Houses, but treated the subject in a general and insufficient manner, and the same might be said of the Article in the Rules of the House. Therefore it seemed very necessary to have regulations made by a special committee for the conduct of conferences between the two Houses. Some might imagine that there was no occasion for haste in this matter, and that when any business requiring a conference presented itself, regulations could easily be compiled. He considered such an opinion erroneous, because conferences were to be held when differences of opinion occurred between the two Houses,

and Committees appointed to conduct such conferences could not properly be entrusted with the drafting of regulations to regulate them. Besides, even if the task of making rules of procedure were left to the Committees, the rules must be endorsed by the House before going into operation. Needless delay in holding a conference might thus be entailed. Mr. Konishi Jinnosuke opposed the motion on the ground that it was premature to take such a step before any occasion arose. Moreover, the House of Peers might think the proceeding unnecessary, and in that event the Committee appointed by the Lower House would not be able to discharge the duty entrusted to it. Some other members were about to speak, but at the suggestion of Mr. Uyei Yemori, the motion was put to the House and carried by a majority. Mr. Amano Saburo said that as special Committees would have to be often appointed, some means of saving the valuable time spent in electing them should be devised. He proposed that in electing special committees the balloting should take place in each Section of the House, and the votes reported to the President, who should add the numbers and announce the result. Some members objected to the motion being framed so as to apply to future elections, and it was accordingly amended so as to have reference to that occasion only. The election thus conducted, resulted as follows:—Messrs. Aoki Tadasu, Shimada Takayuki, Takagi Masatoshi, Kono Hironaka, Suyehiro Shigeyasu, Okada Riochiro, Matano Kagetaka, Matsuda Masahisa, and Sasada Tsutomu. Subsequently, an application for leave of absence by Mr. Inouye was granted. The President announced the business for the next day, and the House rose at 4.12 p.m.

JAPANESE DRESS.

Of the national costume of Japan, the *Nippon* writes:—We have often discussed this subject and now record the following remark made by a well known gentleman in Meguro, not as a new opinion, but because it contains some interesting points:—"The first consideration to be observed in deciding upon a national costume is that it should be made of native materials, and in the second place it should be of a style that may be generally adopted. Unless made of materials produced in the country it would be expensive, and unless of a style that might be universally followed, it could not be made uniform. At present, the foreign style of dress is so much in fashion in this country that wearing apparel has lost all uniformity. Foreign costume requires the use almost entirely of materials that must be imported, which is opposed to the first essential; and it cannot be universally adopted, which is contradictory of the second principle. Ladies' clothing, especially if made in foreign style, is very costly, and a lady may spend several thousands on her dress and yet find herself attired no better than her foreign sister of the middle class, and not nearly as well as a lady of the upper classes, so that her dignity will necessarily suffer in spite of the heavy cost. This is felt by all who have been abroad. Besides, the system of costume should be in harmony with the conditions of our homes. Our houses are mostly Japanese, and even in foreign built houses, we very often have the internal arrangements in Japanese fashion. It certainly cannot be convenient to wear a long skirt in our matted rooms, dragging over in its slovenly course everything with which it comes in contact, or to squat on the floor in trousers which must inevitably become baggy at the knees.

THE "ON-GAKU ZASSHI."

We welcome the appearance of the *On-gaku Zasshi* (Musical Magazine), because we believe it supplies a want felt by the constantly widening circle of persons interested in the study of Western music. The new journal is a monthly publication, and its first issue having appeared in September, we have already three numbers before us. The editor is Mr. Shikama Totsuji, an enthusiastic student of Occidental music, and the author of a useful pamphlet called "Guide to the study of the Organ." Besides

teaching music at several public and private seminaries, he is giving lessons at his house to a number of common school teachers and some other devotees. In the opening number, Mr. Shikama describes the growing prosperity of the study of Western music. In this field, as in almost every other, the Government led the way by the establishment, in 1879, of a musical school under the name of *On-gaku Tori-shirabe-gakari*, which developed into the present Academy of Music. There are now a number of private schools in Tokyo specially devoted to giving lessons in music and singing; for example, the Tokyo *Shoka-Kai*, the *Shoka Senmon Gakko*, the *Kyotitsu Shoka Gakko*, and so forth. Music is also taught in most of the educational institutions, from Colleges down to primary schools, while the Christian churches also give practical lessons in music every week to thousands of believers. While the study of Western music is making such auspicious progress, the editor of the new journal thinks it of vital importance to guard against abuses and evil tendencies which inevitably attend the cultivation of the musical art. He takes upon himself the grave responsibility of leading in the right direction the study of Western music in Japan—what particular abuses and evil tendencies he proposes to correct, he leaves us to guess. As usual, the "declaration of object" is rather grandiose in style and vague in terms, but we none the less wish the new magazine every success, as it is the first of the kind that has ever been started in this country.

COUNT YAMAGATA'S SPEECH IN THE HOUSE OF REPRESENTATIVES.

On Saturday, the 6th instant, the Minister President of State, in accordance with an announcement made to the Lower House by its President, attended in the House of Representatives, and after having duly sought permission of the President, ascended the rostrum and delivered the following address:—

GENTLEMEN:—It is a matter of boundless congratulation for the sake of the country, as it is also a great honour and happiness to me, that we are able to-day to meet together in this hall, in virtue of the great and immutable charter established by the benevolent intentions of His Majesty the Emperor. The present is a fitting occasion for me to make a brief allusion to the course of policy followed by the Government in the domestic as well as the foreign affairs of the State. The policy followed by the Government having been already pointed out in the speech from the Throne at the time of the opening of the Diet, it may seem unnecessary for me to offer any further explanations on the same subject. But there are, Gentlemen, some points concerning which I wish to say a few words for the purpose of eliciting your candid opinion. During the three centuries that followed the adoption of a policy of seclusion by the Shogunate Government, profound tranquillity was preserved throughout the whole country. It is, however, to be regretted that the Government of that time is open to the charge of having run counter to the general tendency of events in the world, and of having thereby retarded the progress of the country during those centuries. At the time of the Restoration, when, considering the altered aspect of things in the world, we changed the course of the national policy, we made it our primary object to redeem, in as short a period of time as possible, this debt of three hundred years' standing. The grave responsibility of which we, in common with you, Gentlemen, still feel the weight, has not yet been half discharged. It has, however, been fortunate that the course and outlines of the policy to be pursued having been moulded by the profound wisdom of His Majesty the Emperor, on the one hand, and by the advice and measures of our distinguished predecessors, on the other, we have been enabled to attain the present stage by a gradual and orderly progress. There may be more or less difference of opinion among you, Gentlemen, as to the relative urgency of particular measures, and as to the mode of carrying them out, but I do not hesitate to say that, so far as concerns the general course of things, we are borne onward by one and the same tide, and that, being equally confined within the limits of its current, we can never stray out of the general channel followed by it. With regard to the Budget, let me mention that we have the responsibility of maintaining the Constitution, the Laws, and the Imperial Ordinances. The Budget for the 24th year having now been introduced by the Government, I rely upon your thorough and candid consideration and advice.

The greater portion of the Budget is taken up with expenses connected with the Army and the Navy. I wish here to draw your attention to the opinions held by the Government on this subject. The administrative and judicial institutions have now to be completed and put in an active condition, while the resources of the country have to be nourished by encouraging and promoting agricultural, industrial, and commercial undertakings. While thus internal administration cannot be neglected even for a day, it is, Gentlemen, our common object to maintain the independence and to extend the prestige of the country. The attainment of this object should not only never be lost sight of by the Government, but also all the subjects of the empire should, whatever changes may hereafter take place in the political world, work in harmony, and, uniting their different paths of progress, should advance along one and the same route, to the end that they may not fail to attain eventually their common object. The independence and self-preservation of a country depend, first, upon the defence of its "cordons of sovereignty," and, secondly, upon the defence of its "cordons of interest." I mean by "cordons of sovereignty" the territories of the country, and by "cordons of interest" the sphere which has the closest connection with the safety of the "cordons of sovereignty." There is not a country which does not defend its "cordons of sovereignty," neither is there a country which does not maintain its "cordons of interest." In order to maintain the independence of the country at the present time among the Powers of the world, it is not sufficient to defend the "cordons of sovereignty" alone; it is also necessary to defend the "cordons of interest." Now if we wish, as we do, to maintain the integrity of the independence of the country by defending not only the "cordons of sovereignty" but also the "cordons of interest," we undertake a task which can be accomplished, not by speculative arguments, but only by constant and persevering efforts within the limits allowed by the resources of the land. Such being the case, it is unavoidable that large sums of money should be required for the Army and the Navy. I have not the least doubt that, with reference to the important points thus far stated, you will upon the whole coöperate and agree with the Government. These points all refer to the grave responsibility which we, in common with you, have to redeem in the shortest possible length of time. For the purpose of discharging this common obligation, we hope that it may not be difficult to obtain harmony of views and unanimity of purpose, provided that we all sacrifice our personal interest in deference to public opinion, and further, that we confer together in an open and unreserved manner.

THE NEW CHINESE MINISTER TO JAPAN.

The *Chinese Times* says:—"Lord Li, the adopted son of the Viceroy of Chihli, the newly appointed Minister to Japan, arrived last night (Nov. 11th) per steam-launch sent by his father, from Peking, where he had audience with the Emperor. He is expected by a great majority to take the place of the late Marquis Tseng in the Diplomatic Service; he is comparatively a young man of about 35 years of age, having an energetic mind to perform the nation's work; with his father's rank and power, he can do more in the affairs of the State than an ordinary official even of high rank. It is said that Lord Li has a fair command of the English language, an invaluable *vade mecum* to a diplomat for the Court of the Mikado, where English is the Court language. The Government has made a wise choice in appointing Lord Li to Japan, for he will surely bring these two sister nations into closer friendship by his genial manner and diplomatic tact, which he acquired while at the Court of St. James's as the Vice-Minister. Many officials—both civil and military—went to P'u K'o to meet him. After visiting his father and mother by adoption, and making his usual official calls, he will proceed south to visit his native home in Anhui prior to his leaving for the 'Land of the Rising Sun.'

NEW SHIPS FOR THE BRITISH NAVY.

DURING the present month, says *Industries* of October 24th, the keels of two vessels, the construction of which was provided for in the last Naval Defence Bill, have been laid in Her Majesty's Dockyards. The *Crescent*, a steel cruiser of the protective deck type, has been commenced in the No. 11 dock at Portsmouth, and a quantity of material for the *Barfleur*, a second-class battle-ship of the barbette type, has been

placed in position on the blocks in the No. 7 slipway at Chatham. The former vessel belongs to a type which is considered to be an improvement on the *Phaeton* class, and will be 360ft. in length by 60.7ft. in extreme breadth, with a displacement of 7,700 tons on a draught of water of 24.7ft. Her normal coal supply is fixed at 850 tons, and she will be fitted with engines capable of developing upwards of 12,000 i.h.p., with which it is expected a speed of 19.5 knots will be realised. The main armament will consist of two 9.25in. 22-ton breechloading guns and ten 6in. guns, while the auxiliary armament will be made up of sixteen 6-pounder and 3-pounder quick-firing guns, and four torpedo tubes. The *Barfleur* will in many respects resemble the class of battle-ship now in process of construction at the various Government and private establishments, of which the *Royal Sovereign* and *Hood*, building at Portsmouth and Chatham respectively, are types. Although inferior in armament, the *Barfleur* will rival her larger sisters both in coal supply and speed. She will measure 360ft. 6in. between perpendiculars, and 70ft. in extreme breadth, with a displacement of 10,500 tons. Her engines, which are of the triple-expansion type, will develop 12,000 i.h.p., from which a speed of 18 knots is anticipated. She will carry in barbettes four 10in. 20-ton breech-loading guns, and will mount, in addition, ten 36-pounder and seventeen quick-firing guns, besides six torpedo tubes for the discharge of Whitehead torpedoes. A sister vessel, to be named the *Centurion* will be commenced at Portsmouth in a few days.

THE PROMOTION OF LI HUNG-CHANG.

We take the following from *Nippon*:—"We learn from Tientsin correspondence that owing most probably to the indisposition of His Highness Prince Jun, father of the Emperor of China, and the consequent inability of that Prince to fill the first seat in the Cabinet, it has been decided that the Viceroy shall be called into the Tsung-li Yamén and appointed Minister of Military Affairs. The successor to the post at present held by the Viceroy is said to be Mr. Liu, who was once Chinese Representative in Russia and is now a high official (*Jumbu*) in Canton. This news is received with some doubt, for from *Jumbu* to Viceroy is a very unusual leap. Liu was only a financial official of Kiangsu before his appointment as Minister to Russia, being on his return from abroad made a *Jumbu*, and if appointed to succeed Viceroy Li, as is rumoured, he would hardly be able to fill the post. It is stated that the proper person to take the place of Viceroy Li would be his elder brother Li Huan-sho, inasmuch as it is believed to be out of the question for any one not belonging to the Li family to control the soldiers who have hitherto been under the Viceroy's banner. If this rumour prove to be true, the policy of the Chinese Government will undergo very considerable change, for with Li Chung-tang in an important post at Peking, and an adviser of the Emperor, the railway to Peking will be completed in a few months, and various reforms carried out. Writing of these rumours the *Hokusei Nippo* (*North China Daily News*) says "should these rumours be true the direction of the policy of the Peking Government will be toward progression, and the military system of China will assume a much different aspect." According to our informant, the death of So Kitaku has hastened the measure above hinted at.

ADDRESS OF COUNT MATSUKATA TO THE HOUSE OF REPRESENTATIVES.

On Saturday Count Matsukata, Minister of State for Finance, laid the Budget for next year before the House of Representatives, and made the following speech:—

MR. PRESIDENT AND GENTLEMEN of the House of Representatives. In submitting to the House the Budget for the 24th fiscal year of Meiji, I desire to state the cardinal points of the financial estimates. The Budget and the documents attached to it will show you that the public income for the 24th fiscal year amounts to 83,114,000 *yen*, omitting fractions, and the expenditure to 83,075,000 *yen*, there being

thus a balance of 39,000 *yen* on the revenue side. Comparing this Budget with that of the current year, it will be seen that there is a decrease both on the side of expenditure and on that of income; namely, 1,827,000 *yen* and 1,957,000 *yen* respectively. Doubtless you will be able to arrive at a full understanding of the causes of increase or decrease in the various items of income and expenditure, by the aid of the explanations given at the beginning of the Budget, and in other documents attached for purposes of reference. Further, in order to avoid all misapprehension, still more minute explanations will be duly furnished at the meetings of the Special Committee appointed to consider the Budget.

At this moment I desire to direct your particular attention to the attached Bill, making appropriations for the building of war ships, the construction of railways, and the prolongation of lines of telegraph. Before explaining the source from which these appropriations are to be made, it will be well, perhaps, to enumerate the several amounts and the times of payment. On account, then, of the extension of lines of telegraph, a sum of 180,000 *yen* is appropriated, and will have to be disbursed during the next fiscal year. For railway construction, the appropriation is 24 million *yen*, which will be paid out during the course of the 24th and 25th fiscal years; and for ship-building a sum of 5,210,000 *yen* is set apart, to be spent during the next five fiscal years. These three sums make a total of 7,890,000 *yen*, which represents extraordinary expenditure, and must be obtained from some extraordinary source, since, under existing circumstances, it is scarcely possible for the Treasury to devote any portion of the State's ordinary income to such purposes. What then is this extraordinary source? Fortunately the Treasury's financial operations during the 21st fiscal year resulted in a surplus of 3,620,000 *yen*, and during the 22nd fiscal year there was similarly a surplus of 4,270,000 *yen*, so that the aggregate surplus for the two years amounted to 7,890,000 *yen* in round numbers. These results were due chiefly to the rapid development of industries, and to an unlooked for increase in the country's foreign commerce. The Government desires to appropriate this surplus to the three objects and in the proportions I have stated, and with that aim submits to you the attached Bill. The three appropriations, gentlemen, are really needed in the cause of the nation's interests, and the Government trusts to obtain your approval, especially as these essential undertakings can be accomplished without recourse to borrowing or to increased taxation.

As regards the Budget, I venture to hope that, having subjected it to full and satisfactory inquiry and scrutiny, you will vote upon it without pre-judgment. Further, I wish to make a few statements with respect to the national debts, and the resumption of specie payments, since both of these matters have an important bearing on the management of the country's finance.

From the Restoration in 1868, up to the month of August in this year, the total amount borrowed by the Government both at home and abroad aggregates 399 million *yen*, of which 145 millions have been already re-paid, leaving 254 millions to be still discharged, in which is included 5 millions of foreign debt. Further, the Treasury borrowed this year from the Bank of Japan a sum of 22 million *yen*, bearing no interest, to be applied to the redemption of the paper currency. Thus the whole indebtedness of the Treasury, domestic and foreign, is 276 million *yen*. There is a principle which has to be observed by every financier seeking to manage the monetary affairs of a nation satisfactorily. It is that, in times of peace and tranquillity, expenditure should be economised and the public obligations reduced as much as possible. A Government is bound, I think, to regard the borrowing of money as a last expedient, only to be resorted to for the purpose of meeting extraordinary expenditure which is at once dictated by necessity and too large to be provided for out of the State's ordinary income. This principle has been rigidly adhered to by the Government since the eleventh year of Meiji. The average annual reduction of the national debt since that time has been 10 million *yen*, and if the same principle be adhered to henceforth with similar strictness, the whole national debt of 276 million *yen* will be discharged in less than 30 years.

The abolition of the *fiat* currency constituted, during many years, the most difficult problem with which the financiers of the empire had to deal. Happily the task is now almost accomplished. I beg you to consider for a moment the history of this part of our finance. During the years following the Restoration, the Government, confronted by circumstances of urgent political necessity, put into circulation inconvertible notes to the aggregate amount of 120 million *yen*. Yet it was found possible to issue, in the 19th year of

Meiji (1886), an Ordinance announcing the convertibility of this large sum. This was the result of steps gradually taken with the object of abolishing *fiat* currency. Of the total amount just stated, namely, 120 million *yen*, 14 millions have been converted into Bonds, 43 millions have been replaced by coins, and 24 millions have been redeemed, so that a sum of only 40 millions are to be dealt with. Of this last amount, 8 millions are to be redeemed with subsidiary coins from 50 *sen* downwards. The redemption commenced in the present fiscal year and will be continued every year at the rate of 1 million *yen*, by means of appropriations from the ordinary revenue. The remaining 32 millions consist of notes of one *yen* or larger denominations, and can be redeemed at any moment, as the Treasury holds a corresponding sum in gold and silver coins. Pursuing the present policy, therefore, the complete redemption of the paper currency is now a question of only a few years.

The finance of a nation, gentlemen, must of necessity be in strict unison with all the other affairs of the Government. Moreover, it has to be managed in that most changeable of all spheres, the economical world. Its relations are wide; its influences boundless. Our country occupies at present an economical position different from that in which other civilized States stand: she is not, I am sorry to say, able to exercise the rights of a free State in respect of fiscal measures. Under such circumstances the management of our finance demands and commands the utmost circumspection, while, at the same time, it has to advance with the progress of other affairs, duly and suitably adapted to their developments and improvements. Therefore, gentlemen, it is my earnest hope that your House and the Government will calmly, impartially, and sincerely discuss and deliberate upon this vital subject, each stating its views unreservedly, and exposing mutual plans of future improvement, so that by our united efforts and co-operation the finances of the Empire may be placed upon a more and more solid and immutable basis.

POLITICAL PARTIES IN THE DIET.

THE *Kokumin Shinbun* writes in the following strain:—"The opening ceremony has taken place, the Diet has held its first public meeting, and the time has now arrived when the different political parties may put into operation their schemes and practise their parliamentary tactics to their hearts' content. Before we attempt to forecast the movements of these parties, it is necessary that we should arrive at some idea of the degree of influence respectively exercised by each. The party most prominent in the Diet are the *Rikken Jiyu-to* (Constitutional Liberals); next to them in order come the *Taisei-kai* (Independents); and then the *Kaishin-to* (Progressists). The National Liberal party is as yet in embryo and we are without material on which to form an opinion. There are in the House of Representatives 132 members of the *Rikken Jiyu-to*, which has thus practically, though not numerically, a majority in the house. The most conspicuous figures in this section of the Diet are Messrs. Takenouchi Tsuna, Oye Taku, Hayashi Tsuna, and others whose wide experience is well known; men whose past careers have been full of events and vicissitudes, as Messrs. Kono Hironaka and Suzuki Shoshi; men noted for research and learning, as Messrs. Uyeki Edamori, and Amaharu Fumiye; and Messrs. Gamo Sen and Kawashima Jun, noted for their grasp of constitutional and financial questions. Beyond doubt this party contains most capable men, but we regret to see that there is a want of unity among the members, who are prone to resort to individual action. Moreover, though gathered under one party name, the members are notoriously different in sentiment and form several groups, more or less antagonistic to each other on certain points. This was plainly apparent in connection with the election of a President, when a wag compared them to so many lodgers in the Grand Hotel, such a want of unity and harmony arises not from inexperience in party movements, but from some other hidden cause for which we may at a future day prescribe remedial treatment. The *Taisei-kai* has eighty-five members in the Lower House—all but double the representation of the *Kaishin-to*. It also is a large party, but owing to the inharmonious elements which it contains, it will not easily be capable of united action. Mr. Suyematsu Kencho is looked on

by many as the chief leader of the party, but there are not wanting persons sceptical of his power to do much, either one way or another. The party includes many men of scholarship and ability: Mr. Nakamura Yaroku (skilled in forestry), Messrs. Oyagi and Motoda (learned in legal lore), Mr. Soma (a political economist), Mr. Sugiura (a leading educationalist), and others. The other day thirteen members of the National Liberal Party—if it may be so-called—applied for admission to the ranks of the *Taisei-kai*, and their application gave rise to considerable agitation, which it is apprehended may lead to the dissolution of the *Taisei-kai*. But no one can prophecy with certainty, for the majority of the *Taisei-kai* are easy-going, lukewarm persons who may be willing to admit the applicants. It is stated, however, that the Tokyo, Osaka, and Kyoto members are strongly opposed to any such action. The speeches so far made in the House only indicate the individual action of members; what policy will be unitedly pursued is a serious question for this political section to decide on. Of the *Kaishin-to* there are 43 members in the House, who are formed into a club named the *Gi-in Shu-kaijo* (meeting place of members of Parliament) and they have already distinguished themselves by the skill with which they manoeuvred on the occasion of electing the President of the House. Though constantly engaged among themselves in disputation and argument, the Parliamentary members of the *Kaishin-to* have displayed wonderful power of union in all large and important questions—an excellent and commendable quality. Indeed it has been well said that if the *Kaishin-to* are to be defeated they will, like the Taira, fall together, while the *Rikken Jiyu-to* will be rent by internal dissensions like the Minamoto. The influence of the former in the House may be compared to that of the Irish party in the English Parliament, but as to whether they can move with such power and activity as characterizes the Irish party, we can say nothing. It is said that the power of the party will gradually be assumed by Messrs. Inukai, Ozaki, and their friends. These persons formed a special sect of the *Kaishin-to* and acted somewhat independently from the rest of the party, but they have now come back into the fold. After Mr. Yano's retirement from active political life, this was perhaps to be expected, for, although Mr. Shimada represents the intelligence and prudence, Mr. Fujita the refinement and talent, and Mr. Nakano the experience and good management of the party, yet the task of resorting to different tactics and manoeuvres, and fighting with a small isolated force against powerful enemies, must in the end be entrusted to Messrs. Inukai, Ozaki, and their friends. Whether, however, they will prove to be skilful generals in the Diet, is a different question.

"THE LIFE OF TOYOTOMI HIDEYOSHI."

THE Fourth Part of Mr. Walter Denning's "Life of Toyotomi Hideyoshi" has just been issued from the Hakubunsha press in Tokyo. Containing 79 pages with illustrations of the same character as those rendered familiar by the preceding parts, it carries us down to the period when Hideyoshi had reached almost to the zenith of his power, having avenged Nobunaga's death, triumphed over his own jealous foes Shibata and Katsuiye, assumed the title of *Kam-baku*, and commenced his successful campaign against Shikoku and Kiushiu. A record of this kind cannot be expected to command general interest. In order to make it appeal to the taste of every-day readers, it should be carried into details to furnish which long and wide research would be necessary—details of the kind of arms and armour employed; of the tactical and strategical arrangements resorted to by the various commanders; of the fashion of a soldier's life in the field; of the manner of obtaining supplies of provisions and money; of the legislation resorted to by the various rulers; of the correspondence that passed between them, and of many other things without which no picture of a remote era can rise above the level of a mere outline sketch. Mr. Denning's original scheme did not include all this. He set out to

tell us of Hideyoshi and of Hideyoshi only, and with that object he has followed the famous commander through a series of campaigns and intrigues in which we learn indeed to wonder at Hideyoshi's marvellous foresight, astuteness, and fertility of resource, but at the same time find ourselves longing to know something more about the era of his achievements; longing to read a genuine history of the time and not merely a bald account of how castles fell, camps were broken up, defeated generals committed suicide, and rival leaders devised stratagems of the most treacherous and sanguinary character. There is in fact, little if anything to distinguish this story from a chapter of mediæval European annals, except, perhaps, that the influence of woman appears, according to these pages, to have been utterly absent from the feudal struggles of Japan in the sixteenth century. That woman really did fail to play in those checkered days in Japan the part played by her under similar circumstances everywhere else, we greatly doubt, but the volume now before us leaves this, in common with many other points, untouched. Mr. Denning has not succeeded in breaking away from the trammels of his Japanese originals. He repeats their dry narrative, unrelieved by any of the vivid portraiture distinguishing the modern from the ancient historian, and re-animating figures which otherwise move like dummies across the dim vista of an unappreciated past. Will anyone ever do for Japanese history what men like Motley, Buckle, Taine, Carlyle, Lecky, Froude, and the brilliant school of German annalists have done for the histories of other lands? It would have to be in a great part a labour of love, and perhaps even then the toil of collecting materials would be insuperable. We remember to have heard of a project, conceived some years ago by an enthusiastic student, to write the record of the Tokugawa Dynasty in such a fashion that foreign readers should be able to form a thoroughly clear idea of the civilization which existed in Japan at the time of Commodore Perry's coming, and of the train of legislative, social, sumptuary, administrative, ethical, and religious factors by which that civilization had been evolved. The ambitious scheme never went beyond the compilation of a partial list of books of reference, for the projector found that if he devoted twenty years to the task of translation and collation he would still be only on the threshold of achievement. Buckle, in his opening chapter on the resources for investigating history, sneers at authors who, though, from indolence of thought or from natural incapacity, unfit to deal with the highest branches of knowledge, nevertheless think that they have only to pass a few years in reading a certain number of books in order to qualify for historians of great peoples, and to become authorities on the subjects which they profess to treat. Yet Buckle himself prefaces his wonderful section of a stupendous undertaking by a bewildering list of authors quoted by him; a list filling thirty-two closely printed pages and containing, if we remember aright, something like twelve hundred titles of works. Some discredit, indeed, was thrown on the character of Buckle's work by a story circulated after his death to the effect that his splendid volumes were the outcome of a mere experiment, consisting in a well organised scheme to exploit as many libraries as possible and generalize their materials. Would that we had a Buckle in Japan, all the same, and would that libraries to be thus treated were available. At present, perhaps, we can hope for nothing better than volumes such as those published by Mr. Denning, dealing with a limited class of incidents in the career of some history-making hero of old Japan, or with a particular phase of her former life. Hideyoshi in Mr. Denning's pages becomes an intimate acquaintance, so far as the fighting side of his story is concerned. The wonderful shrewdness and intrepid self-reliance which commanded our admiration in the opening chapters of his biography, grow if possible more and more conspicuous as the tale proceeds, and we are compelled to admit that such a man would have been great in any age and under

any circumstances. Perhaps in subsequent volumes—for we believe that one or two more are to come—the other side of his character will be displayed to our view; his family affections; his artistic instincts; his legislative faculties, and his fiscal ability. Thus far we cannot do better than quote the conclusions drawn by Mr. Denning himself from the materials so carefully and laboriously compiled:—

Throughout his career he trusted quite as much to the moral persuasive power of his generous and brave actions as to the use of physical force. His self-control and forbearance at the Council Board, though they enraged his immediate rivals, whose object was to provoke him to commit some serious indiscretion, tended to raise him in the esteem of the other members of the Council, who regarded them in the light of a sacrifice of personal interests to the maintenance of Oda's supremacy in the state. Moreover, the insults that he received at that time furnished him with an excuse for a display of force at the funeral ceremony and for the hostilities that brought about the overthrow of Shibata and Sakuma. By avoiding precipitancy Hideyoshi made his progress sure. His career was marked by no retrograde movement. It was one steady advance to the goal. Napoleon I. used to speak of himself as "the Child of Destiny" and to attribute his success to "his star." "They charge me," he said, "with the commission of great crimes. Men of my stamp do not commit crimes. Nothing has been more simple than my elevation. It is in vain to ascribe it to intrigue or crime; it was owing to the peculiarity of the times. I have always marched with the opinions of great masses, and with events. Of what use, then would crimes be to me?"

Thus did the "Child of Destiny" whose life we are considering, move on with calmness and self-possession to the zenith of his power—self-denying, self-postponing, sacrificing everything to his aim—never allowing incidents to govern policy, never hurried away from his course by an unlooked-for event, blending and concentrating everything so that it should conduce to the attainment of his one grand purpose, and refusing to admit that any obstacle was too formidable for his genius. "There shall be no Alps," was the motto of his life.

He had no real belief in heaven's help any more than Napoleon, but, like the French hero, he was fond of attributing his success to this source for the sake of inspiring awe among his contemporaries. Though he had never studied the universe scientifically, he was as sure as the most advanced scientist of modern days that no supernatural power interferes with the working of natural laws; that events and achievements which the vulgar attribute to Divine intervention are all explicable by and traceable to the operation of these laws; that success depends on the nicety of combinations. His thorough knowledge of men enabled him to make the most elaborate calculations as to the manner in which they would act under given circumstances, and to adjust his plans with skill and minuteness that was perfectly astonishing.

The sagacity which displayed itself in such a remarkable degree in his later years was the result of the garnered experience of the most observant of minds. Nothing that he personally superintended failed, because before commencing operations his keen foresight had anticipated every difficulty and made ample provision for it; and the stars were not more punctual than his arithmetic.

THE PRESIDENT AND VICE-PRESIDENT OF THE HOUSE OF REPRESENTATIVES.

THE *Kokumin-no-Tomo*, while congratulating Mr. Nakajima on his appointment to the position of President of the House of the Representatives, frankly avers that it does not think him the best person that could have been selected for that responsible office. When Mr. Mutsu returned from the United States, our contemporary published an article strongly advising him to leave the Government service, and become a candidate for the position to which Mr. Nakajima has now been elected. But Mr. Mutsu's acceptance of a Ministerial portfolio entirely marred his prospects so far as the Presidency of the Lower House was concerned. Of the remaining candidates for that position, our contemporary thought there were some who were better fitted than Mr. Nakajima to discharge the peculiarly difficult duties devolving on the President of the first House of Representatives. The Tokyo journal admits that Mr. Nakajima possesses certain qualities calculated to make him a good President under ordinary circumstances. "He enjoys," we are told, "the reputation of being impartial, and to a certain extent we share this opinion. . . . He also seems to possess a measure of coolness, which is an important qualification in one charged with the keeping of order during exciting debates. He appears to be a man of negative character, and though

something of a hermit in the field of political warfare, this very circumstance may, in some cases, be of advantage at the council board." Further his influence among various political parties, and the prominent position he has occupied in the public mind ever since the Restoration, will, the *Kokumin* observes, be of some advantage to him in the discharge of the duties of his office. But the peculiar circumstances under which constitutional government is now being inaugurated require qualifications higher than these in the President of the first House of Representatives. The *Kokumin* admits Mr. Nakajima to be a competent man, but says that it is somewhat doubtful whether he will be able to maintain dignified relations with the experienced and gifted President of the House of Peers, and to escape being overshadowed by the towering figure of Count Ito. In short, the President of the Lower House must not be an irresolute man, neither ought he to be of a too conciliatory, much less subservient, mood towards either the Executive or the House of Peers. What would be most regrettable is that he should be regarded as a spy of the Government. The *Kokumin-no-Tomo* does not think for a moment that Mr. Nakajima is open to any of these charges, but still advises him to take some decisive steps to dispel doubts that are at present entertained about him.

As to Mr. Tsuda, Vice-President of the House of Representatives, our contemporary is unable to say whether he is fit for his position or not. While he was sleeping in his easy chair at the Senate, the public had even forgotten his name. That he was able to obtain a majority of votes in the Hongo-Shitaya district, was owing, says the Tokyo journal, to the absence of Mr. Taguchi Ukichi on his voyage to the South Sea Islands. Thus our contemporary had not expected to see him in the House of Representatives, much less to find him in the post of Vice-President. But the post of Vice-President is less difficult to occupy than that of President, and the *Kokumin* congratulates Mr. Tsuda on his election to the easier of the two offices.

This is not very sympathetic writing, it must be confessed. Mr. Nakajima ought to be this, and it would be well if he were the other, but doubtless he is everything desirable. Faint praise indeed, damning enough for its faintness, and especially injurious because of the embodied insinuation that Mr. Nakajima's relations with the Government are not above suspicion. It is a pity that such innuendoes should receive publicity in the columns of an important periodical.

AN ANCIENT PICTURE.

READERS of Japanese history remember, of course, that in the year 1274 the Great Mongolian Sovereign Khublai Khan, afterwards conqueror and Emperor of China, sent a large military and naval force against Japan, but that the expedition was wholly unsuccessful, being repulsed with heavy loss at Hakata by the soldiers of Chikuzen and neighbouring fiefs. Kublai took greatly to heart this, his first defeat by land or water, and when firmly established on the throne of China, he sought to re-establish his prestige by despatching a big armada to chastise the contumacious islanders. In the ranks of the invading force, which is said to have aggregated a hundred and fifty thousand men, Koreans, Chinese, and Mongolians were enrolled, and it seemed scarcely possible that Japan could resist effectually. Her sailors, however, appear to have resembled the English in tactical skill and intrepidity. With a comparatively insignificant squadron they managed to hold their own in several fights against the huge Chinese navy, and while these decisive battles were being waged, a tempest came to Japan's aid and wrought among the Chinese warships havoc somewhat similar to that which overtook the Spanish Armada off the coast of Great Britain. How many perished in the storm, the records do not tell, but it is certain that the active, plucky Japanese *Samu-*

rai took full advantage of the event, and, attacking the surviving Chinese ships before they could re-assemble, destroyed them in detail. Chinese history avers that only three men out of the whole force managed to escape to China. It may well be conceived that such an event stirred the pulses of men of the time, and that efforts to commemorate it were made. Among these efforts was a series of paintings by Naganori and Nagataka, two skilled artists of the Tosa School. There seems to be very little doubt that the pictures were finished in the year 1293, and that they were painted by order of and under the direct supervision of Takezaki Gorobiyoye-no-jo Suyenaga, a *Samurai* of Higo, and one of the principal captains of the Japanese forces, in whose family they have been handed down as heirlooms from generation to generation. Contained in two gigantic scrolls with lengthy written accounts of each incident depicted, they constitute a unique historical record of the period. The Tosa artists chiefly devoted themselves, from the time of Takuma Takeuji, the founder of their school, to painting battle scenes. They were seldom happy in their rendering of the human figure, still less so in their delineation of horses, but their work was accurate and minute in other respects. The scrolls of Naganori and Nagataka differ in one respect from the ordinary pictures of their kind: the figures are exceptionally large, and it seems not improbable that the artists sought to produce likenesses of the principal warriors figuring on their canvas. At all events the work is very firm, delicate, and minute, and of its value as a historical monument there can be no manner of doubt. An opportunity of examining the scrolls was lately afforded to several residents of Tokyo, and we believe that there is now a prospect of their passing into the possession of the Imperial Household, the fitting repository of such national relics.

THE SILK TRADE OF BENGAL.

A LONG and interesting report on the recent decline in the silk trade of Bengal, its causes and the remedies, has recently been issued by the Bengal Government. It is written by Baboo Mukerji, who was specially appointed to study the subject, and who spent some time in the European silk districts in the course of his labours. Although the report is a very long one, its general substance can be summarized in a comparatively brief space. The periods in the history of Bengal silk export are as follow:— (1) From 1812 to 1835 the export of raw silk was 972,108 lbs. (2) From 1838 to 1855 it was 1,435,225 lbs. (3) From 1856 to 1870 it was 1,518,592 lbs. (4) During this last period (1856 to 1870) waste silk first began to be exported, the average annual export being 520,750 lbs., making the total of raw silk and waste 2,039,342 lbs. (5) The average annual export of raw silk and waste together from 1874 to 1877 was 1,581,860 lbs. There was thus a steady rise in the export of Bengal silk from the days of the East India Company until the complete revival of the silk trade in Europe. This revival was wholly due to the increased production of cocoons, owing to the introduction of Pasteur's system of drainage, which had made the cocoon crop a certainty. The improvements already introduced with success in other silk producing countries, will have the tendency further to lower the prices of cocoons, and consequently of raw silk. The prices now prevailing in Western markets are the lowest on record. They have been going down steadily since 1876, and as a consequence, with wages rising in Europe, the Baboo thinks that cocoon-rearing will have to be abandoned there and the manufacturers will be dependent on other countries. But, although this might appear favourable to Indian sericulture, it can only be so if Pasteur's system is introduced there and if Bengal silk continues in demand. But it is, he thinks, very doubtful whether Bengal silk of the present quality will be used at all in Europe in future, except for certain particular purposes. Bengal silk has some special qualities, on account of which it may probably always reckon on a small

demand. It is the best of all silks for gloss, elasticity, and for taking the black dye, and no other silk will make better hats than that of Bengal. But taking it all in all, it is the worst silk in the market, and is inferior to European, Japan, and China silks. When these sell at 45 francs per kilo, Bengal silk sells at 32 francs. The reason for this is that it is the worst reeled silk in the market, and it will be impossible ever to reel Bengal cocoons to produce silk like the European, Chinese, or Japanese silk, however the reeling machines may be improved. A European, Chinese, or Japanese cocoon of a good class, contains thread four times longer than a Bengal cocoon, the former giving 800 to 1,000 metres of reelable *bave*, the latter only 202 to 250 metres. This must make Bengal silk at least four times more uneven than other silks, whatever reeling machines may be employed. It is necessary to add Bengal cocoons at the time of reeling four times as often, as is the case with other cocoons for in addition to its other disadvantages the *bave* of the Bengal silk is conspicuously the weak and therefore liable to break. Another source of unevenness in Bengal silk, due to the character of the cocoons, is the lightness of the chrysalid, causing the *telette* to jump up and cause *duets* or *paquets*, whereas the chrysalid of the *Bombyx Mori* cocoons by its own weight helps to break the thread whenever it becomes very fine towards the *telette*. The effect of unevenness is enhanced by the practice of trying to hide it which is prevalent in Bengal filatures. When the skein is taken from the reel, it looks more uneven than when it is packed up. Picking and clipping help to make it look more even; but these processes cause the continuity of the *grege* to be severed in several places. Skeins, in their rough state, are really better than skeins prepared in this manner; but the former look so dirty that in European markets the latter fetch a higher price. This is the excuse for the practice of picking the skeins prevalent in Bengal filatures. When the Bengal *grege* is made into orgazine and trame, it breaks so continually that one girl can manage only 6 to 30 skeins at a time during the process of milling, whereas 100 skeins of European or superior Japanese and Chinese *grege* can work at the same time under the supervision of one girl. This makes it so costly to turn the Bengal silk into account, and where labour is dear, as in America, they will have nothing to do with Bengal. In France and Italy also wages of labourers have been steadily increasing. This Mr. Mukerji believes to be another cause, besides the diminished production of cocoons in Bengal, of the decline of the Bengal silk trade. With increase of production of superior cocoons in China and Japan, and with the enhancement of the manufacturing industries of silk in Europe, a still further diminution in the price of silk may be reasonably expected. On the other hand, of course, an increased production of cocoons in Bengal, due to the introduction of Pasteur's system, will tend to lower the price at which *grege* can be produced, by giving full work to all filatures. But the strain will continue just the same, and even with the introduction of Pasteur's system, if that alone is done and nothing else, no permanent amelioration can be expected. The first and most important measure he recommends is the introduction of the superior *Bombyx Mori* cocoons. When this is done it will be an easy matter introducing improvements in reeling. The reeling machines in use in Bengal now are just the same as those used in the days of the East India Company, with the exception that steam is employed in heating the water in the basin. Great improvements have taken place of late years in this direction in Europe, and not only in Europe, but also in Japan and China the recent inventions have been eagerly adopted. The substitution of *Bombyx Mori* cocoons for the *Bombyx Fortunatus* and the *Bombyx Croesi* will, in itself, improve the reeling of Bengal silk. But to bring it to the standard of European, Japanese, and Chinese silks, improvements in reeling machinery also are necessary. If Bengal can produce silk equal

in quality to European, Chinese, or Japanese, it will always be able to compete successfully with other countries in European markets, for nowhere else in the sericultural countries is labour so cheap. In addition Baboo Mukerji proposes the establishment of a sericultural laboratory in India with trained men to travel throughout the silk districts and instruct the peasants in the latest improvements. From recent information from India it seems that this suggestion is being actively carried out by the Bengal Government.

PATENT MEDICINES.

THE question of patent medicines is to the fore just now—not that these compounds are ever much in the background. The very fishermen on the Thames are now supplied gratis with sails, which bear the name of a well-known patent drug; by which the lover of unalloyed nature is annoyed in a peculiar and distressing way. Captive balloons likewise are made to serve advertising purposes, air, earth, and water being thus brought under subjection. A chemist writing in last month's *National Review*, points out the dangerous nature of many of these drugs, and the need of stricter regulations in their sale. He instances the Sanitary Bureau of Japan as an excellent institution to copy, in the salutary control it exercises over the sale of patent medicines. Proprietors of patent medicines in Japan must present a sample, accompanied by a detailed account of the various ingredients and the proportions used, as well as directions for the use of the drug and an explanation of its supposed curative properties. In France it is said that the deficiency in the revenue is to be met by a tax on patent medicines.

THE "ORIENTAL NEWS."

WE translate from the new journal *Toyo Shimpō* (*Oriental News*) the following editorial by Mr. Suge, setting forth the objects and aims of its conductor:—The past year has been an exceptionally busy one, but what has been the result to us, Japanese, of all the bustle? The quantity of silk exported in 1889 amounted to yen 26,616,541, while the export from the beginning of this year to the 24th of November last is valued at yen 11,735,113. The deficit of yen 15,081,428 represents a reduction in the inflow of money from abroad. Again, rice exported during 1889 amounted to yen 7,434,653, while this year we have imported foreign rice to the amount of yen 12,019,736 which we paid for in cash. Instead of selling we have bought, and thus suffered a two-fold expense. Add to this the decrease in the amount of exported silk, and we have the total amount of our export reduced by over forty millions. Of course, the materials represented by this reduction are still in the country, and therefore we do not say that the amount directly shows the loss sustained by our countrymen; but we can say that this is the principal cause that has brought about the great pressure felt in financial circles in Japan. In fact the past year has been notably one of expenditure and consumption. It is natural that when social affairs are active, consumption should be great, but at the same time we should endeavour to increase our produce and add to our wealth. What we understand by the progress of civilization may be pretty well summed up in those words. To be uselessly busy, to spend our days only in consumption, is most wasteful, and what we earnestly wish to avoid. Accordingly we will give our best attention to industrial and financial affairs, and try to keep the public well informed on those subjects. Again, we have another word to say. The foundation of our people's wealth consists in land, officially valued at yen 1,600,000,000. Adding to this the mines, rivers, valleys, and sea coasts as well as other sources of wealth, our gross possessions should be something over four thousand millions. Under present circumstances, placed as we are in a whirlpool of competition, are we to look unmoved on what is passing around us? We are told that some time ago the United States Government introduced into Congress a bill providing for the development of the navy, but

it was thrown out on the ground that having many millions of wealth, and being separated from the European Powers by the wide ocean, America need not allow herself to be disturbed by the clamour of competition, and can provide herself with sufficient ships and guns when these become necessary. This may be all very well for the United States, but such reasoning cannot be applied to our case. We do not advocate the immediate and extensive strengthening of our navy, but it seems to us that the question of our relations with foreign Powers and the attitude of those Powers towards one another, receive too little attention among our countrymen, and this deficiency we propose doing our best to repair. Further we should not aim only to keep ourselves well informed of the conditions of Occidental countries; our attention should also be given to Oriental States. It is much more easy to get information with reference to European than to Eastern countries. Trustworthy knowledge as to affairs in Peking is more difficult to obtain than news from London; correspondence from Canada is much more easily attainable than news from Siberia or Manchuria. The result of this is that we often know much more of affairs in distant countries than we do of events occurring, so to say, at our own doors. To this point we shall devote ourselves, and hope to change matters in some degree. Nor will the scope of the *Toyo Shimpō* be confined to the things that we have enumerated. We shall endeavour to promote the welfare of Japan, and to strengthen her foundation: these were the main objects of the writer of this article when he laboured to assist Count Goto in forming the *Daido Danketsu*. These aims are not to be inscribed on any political banner, and therefore during this autumn we have withdrawn from party life, and now stand isolated and independent. The views which we have outlined, and the attitude we have described, will be the opinions to be expounded and the standpoint assumed by the *Toyo Shimpō*.

THE "NIPPON-JIN."

AS stated in our last weekly review of the vernacular press, the *Nippon-jin* has become a weekly periodical, and some noteworthy changes have at the same time been introduced into its management. Though not publicly announced, it is understood that the editorial department will hereafter be under the sole control of two writers, instead of a dozen, as heretofore. The two editors are Mr. Miyake Yujiro, a distinguished graduate of the Imperial University, and on the staff of the *Kokkwa Shimbun*, and Mr. Shiga Shigetaka, an equally well known graduate of the Sapporo Agricultural College and one of the most popular writers of the nationalist reactionary school. The rest of the former joint editors—the best known among them being Messrs. Kikuchi Kentaro, Miyake Yujiro, Matsushita Jokichi, and Kon Sotosaburo—will continue to write in the journal, but their essays will henceforth be distinguished from those of the above mentioned two editors by the signature of their names, whereas the editorial articles will be anonymous. The first number of the periodical under its new aspect was issued on the 25th of last month. It is divided into five departments, which are headed, in Carlylean fashion, "Spirit" (*Seishin*), "Private Opinions" (*Ika-gen*), the "Flesh of the Weak, the Food of the Strong" (*Jaku-niku Kyō-shoku*), "Leisure" (*Tsurezure*), and "Public" (*Kōkō*). The import of these curious headings becomes clear as we examine the articles and other matter arranged under each caption. The "Spirit" department comprises two editorial articles, one on the New Career of the *Nippon-jin*, and the other on the Policy of Japan towards Korea. In the first article we are told that the *Nippon-jin* has now entered upon the third epoch of its life. When it first made its appearance in the spring of 1888 the denationalizing tendency of the time had about reached its highest point, and the periodical devoted its whole energies to divert the tide of popular infatuation from slavishly copying every thing Occidental. During the first epoch of its existence, its sole purpose was to

expound the so-called doctrine of *Kokusui-hozon* (the preservation of national points of excellence). In the next epoch, dating from May last year, the *Nippon* took for its purpose to propound the principles of the development of whatever is characteristic and excellent in the national life and institutions of Japan. During the third epoch which it has just entered upon, the Tokyo journal promises to apply its doctrines to the practical questions of the day. In the second article, attention is drawn to the necessity of protecting the Kingdom of Korea. After remarking that it is of paramount importance for Japan to establish once for all a fixed course of policy in her foreign relations, the Tokyo journal goes on to narrate the history of competition between the three great races of Europe, the Latin, the Teutonic, and Slavonic, in America, in Africa, and in Asia. Siam, says the writer, is the point of contact between the Latin and Teutonic people, while the Teutonic and Slavonic races seem to be destined to come to blows in Persia and in Korea. Next our author proceeds to review the salient points in the history of intercourse between Japan and Korea: how the invasion of the peninsula by the Empress Jingō was followed by a rapid introduction of arts and literature from that country; how, after the invasion by Hideyoshi, Korea continued during a long time to pay tribute to Japan; how, during the Tokugawa régime, the Shogunate Government sent succour to Korea on several occasions, when that country was in distress on account of famine or other natural calamities; and how since the Restoration Japan has led the way in introducing the hermit Kingdom to the rest of the world. There are now in Korea 4,800 Japanese, while the other foreigners number in all about 750, of whom 650 are Chinese, and 100 are Europeans and Americans. According to trade reports for 1888, 70 per cent. of the imports and over 90 per cent. of the exports were in the hands of the Japanese. While Japan thus occupies a unique position in Korea, continues the writer, a powerful nation is secretly but steadily trying to bring that kingdom under its own protection. Should Russia declare a protectorate over Korea, would it become Japan to tamely acquiesce? The writer emphatically answers in the negative. It is the duty of Japan, he says in effect, to protect the independence of Korea, for Japan is to Korea what an elder brother is to a younger. But a few lines further on, he throws off the disguise of justice and humanity, and confesses that, after all, what he seeks is simply the interest of his own country. He says in plain language that Japan might perhaps recognize the claims of Russia over Korea, if the former Power would either return Saghalien or cede certain islands to Japan. In conclusion he recommends the augmentation of the military and naval forces, and states that enough money will be obtained for this purpose by economizing public expenditures with the utmost vigilance.

The "Private Opinions" department is entirely taken up by an essay on the Japan of To-day. The writer is Mr. Chikami Kiyoomi, a well known logician in the capital. In the present number he discusses the various theories thus far advanced with regard to the influence which physical and moral environment exerts on a people, and promises in his next article to apply these theories to the present condition of Japan. In the department picturesquely denominated the "Flesh of the Weak, the Food of the Strong," Mr. Kuga Minoru, editor of the *Nippon*, translates Jules Ferry's work on Tonking. The "Leisure" department contains poems (in Chinese as well as Japanese), reviews of books, and dissertations on various literary subjects. The last department, "Public," consists of interesting comments on current political, social, and literary topics.

RUMOURED DIPLOMATIC CHANGES.

THE *Fuyu Shimbun* says:—If the Cabinet should approve of a proposal put before it by Viscount Aoki as to certain changes in the diplomatic service, a very important step will be

taken. The new measure will involve the transformation of the Japanese representatives at the Courts of England, France, Germany, Austria, Russia, the United States, &c., into *Shimin-kwan* (officers appointed directly by the Emperor). Their terms of office will be extended from three to five or seven years, and they will thus be enabled to acquire more extensive and varied knowledge of the countries to which they are accredited, while the heavy expenditure necessitated by frequent changes of Ministers will be avoided. A difficult point will be encountered in finding men suitable for these posts, but it seems that the names of Viscount Enomoto, Viscount Miura, and Mr. Hanabusa have so far been received with approval, and in all probability two members of the present Cabinet will be deputed to represent their country abroad, so that indirectly the change will create vacancies in the Central Government.

"GILDED ARROWS."

THE query oft repeated, "is life worth living?" will probably in a short time be no longer answered by an allusion to the "liver," but by "it depends upon the microbes." The virulent microbe threatens to assume such gigantic proportions as to make death itself a puny terror compared with an existence in which every hour, nay every moment, is recklessly wasted unless devoted to solving the problem how to dodge a possible germ of hideous disease. We have been warned in sepulchral tones to flee the cushioned seductions of railway carriages, cabs, and theatre stalls, yea even the *jurikisha*; we have been cautioned to eschew the circulating library, nor even borrow from a friend a coveted tome without first inquiring whether his eldest, intermediate, or the baby, has had, has, or is likely to have, any of those infectious ills which infantine flesh is hereditarily addicted to. Further, we have been taught by the well informed 19th century Job's comforters that undreamed of horrors may be inoculated by incautiously receiving goods from the tailor, the laundress, the wine merchant, or the butcher, till our bodies have waxed faint, and our spirits waned from the high tension of apprehensive dread to which our nerves have been screwed up. Surely we had been fully charged with precautionary instructions as to what we should eat, drink, and avoid, when lo! another microbe "medium" has been discovered, and another channel laid bare through which fell disease may march, and claim us for its own. This new "scare" is one that will cause our formerly luke-warm regard for German bands to approach considerably nearer frigidity. The microbe, the consumptive microbe, has been discovered in the recesses of a trombone! How disturbing to one's peace of mind these modern scientific discoveries are! Romance and poetry are being deliberately trodden out of everything. Once there was a thrill of delicious idealism in the word "duel," but now, the most romantic mind is obliged to remember that swords and bullets are septic, and one vaguely hungers for the traditions of one's youth when love was depicted as daring any and every evil for its mistress, a passion that would have scorned a septic sword. Music used, too, to be credited with a tendency to allay unruly inspirations of the wayward breast, but surely its present mission—per wind instruments at least—will be rather to arouse anticipations of deadly parasites and fatal diseases.

And so that little domestic scheme in Utah has fallen through! The Mormons, too, have evidently been considering the marriage-a-failure question, and being so very much married, have had an incomparably wider sphere for their investigations into the subject than ordinary folk. If they have found it does not answer, we can hardly presume with our solitary experiences to assert a contrary opinion, though we may permit ourselves a certain sense of gratification at their being obliged to return to our system. Evidently we have the best of it. Mrs. Mona Caird will doubtless be able to throw a little light on the subject. It

seems a pity that the conclusion Brigham Young's followers have arrived at, did not steal upon them more gradually, so that the number of ladies forming their domestic circle could have been lessened by units instead of tens, and an off-hand dissolution thus avoided. One naturally feels curious as to what will become of the wives thus suddenly disengaged. Will they emigrate to some colony where feminine charms are rare? That would be one solution of the difficulty, and assuredly a safer one than allowing all these disaffected widows to circulate freely among their innocent sisters the "failure" doctrine. Then think of the fatherless offspring! that is if they are retained by their respective manmas. On whom will devolve the privilege of these babies' maintenance. If on paterfamilias, will there not be a virtual repetition of "Rachael weeping for her children," and an anything but blissful interlude with the youngsters bereft of motherly care. Some little intricacy will also envelop the matter of which wife shall be selected to be the "one wife" of respectability. This, supposing the sweet plurality of better halves to number many "fair" among them, will give an opportunity for Solomon-like discernment, and call for a display of Spartan-like unimpressibility.

In spite of the riotous agitations and tempestuous discontent supposed to be rampant among British workmen, it appears that the year of grace 1890 has been marked by a very appreciable decrease in the number of emigrants. This does not look as if things were so very bad in the old country. Someone will perhaps suggest, with that gloom which always endeavours to take the sunshine out of every body's sky, that things are so very bad that poor folks have not had the wherewithal to flee. But we look on the bright side of the picture, and maintain that so long as the rats continue to live in the hold, there is very little fear of the ship sinking, and so long as a grumbling man continues to use his tools, it is very evident there is not much wrong with them. The strikes and troubles which, during the last 18 months, have shaken England like an earthquake, dislocating her commercial system and convulsing her civil organization, have probably been her greatest safeguard. They have been so many outlets for the spirit of grumbling inherent in every man, and especially in Englishmen, and are not so much the outcome of an existing wrong, as a momentary bubble caused by the agitating influence of men to whom notoriety at any price is better than no notoriety at all. These men to gain their own ends have made poor Hodge their unhappy tool, placing in his mouth complaints it never would have framed without aid, and gorging his mind with food it is incapable of digesting, leaving him in the end to chew the bitter cud of reflection over savings wasted, promotion forfeited, and the unsatisfying result generally of socialistic strife. We fully believe that few voluntarily join in a strike more than once, unless it be those sharper members of it, who somehow always contrive to come out the richer from every storm.

In connection with the subject of the British workman, another instance is furnished that discontent only forms a superficial crust to much that is sterling in his composition, much that savours of staunch loyalty and love for his Queen and country, rather than of republicanism or socialism. Things were in a sad state at Aber-gavenny; platform orations from members who had more interest in their own verbosity than in Wales' happiness, had laid the train for an outburst of socialistic ruffianism, a train which a taste of hard times quickly fired. Discontent and murmurs spread like a contagious disease among the ignorant masses, till the news was flashed among them that their Prince's eldest son was coming to visit the land of Bards. Like clouds before sunshine the revolutionary germs were scattered, and all that is noblest and best in England's roughest sons, rose to the surface in a glad, genuine welcome to H.R.H. the Duke of Clarence and Avondale, carrying away

in its hearty sincerity all traces of an evil genius which had been threatening unpleasant times for Wales. Surely this is a very notable proof that the old spirit which has tended so largely to make England what she is, has not died, nor is in any danger of dying. GRENON.

OCTOBER'S OBITUARY.

DURING the month of October two names well-known to the literary world passed over to the majority. The professor of political economy at Oxford, Mr. J. E. Thorold Rogers, who had been in failing health for some time, died on the 10th October at the age of sixty-seven. Mr. Rogers has been long before the public as a thorough-paced Free Trader, an energetic member of the Cobden Club, and an advanced Radical in Parliament. A graduate of Magdalen's, Oxford, he began life as a clergyman of the English Church, but relinquished orders in 1880 to enter Parliament, where he sat for five years as member for Southwark. He was re-elected in 1885 for the Bermondsey division of Southwark, but in 1886 lost his seat to a Conservative, Mr. Rogers having followed Mr. Gladstone to his Home-Rule camp. For many years Mr. Rogers was engaged on a valuable work, "Work and Wages in England during the past six centuries," the last volume of which appeared only this year. A few days later another Oxford scholar passed away, Professor W. Y. Sellar, who for the past twenty-seven years held the chair of Latin Literature at Edinburgh. His works on Virgil and the Latin poets gained him a high reputation. Before this, he had been for six years professor of Greek at St. Andrew's University. Professor Sellar's father was for many years factor to the Duke of Sutherland, and carried out the unpopular "deportations" or "evictions," which stirred up so much bad blood in the Highlands some forty years ago. His brother, Mr. Craig Sellar, is a distinguished lawyer, and has published an authoritative work on the Scotch educational code.

THE TREATIES AND OPINION IN ENGLAND.

THE London correspondent of the *Manchester Guardian* writes as follows:—

I hear on excellent authority that in diplomatic circles here and on the Continent the latest Japanese proposals for a revision of the treaties with Western nations are not taken seriously. The view is that the new Japanese Foreign Minister was forced by circumstances to follow the abortive treaties of last year by other propositions, and that in doing this he elected to make those which would embody the extreme demands, and therefore be popular at home. They are therefore framed (I am now repeating the current diplomatic view) with an eye to catch the breeze of popular favour in Japan rather than to meet with approval and success abroad. The circumstances which impel the Minister to this course are that the present Government, which came into power after a crisis which overthrew a very strong ministry, is not in a very stable condition, and that it is about to pass through a Parliamentary session, which is a novel experience to a Japanese Administration; and besides, the new House, as far as its complexion can be judged, is not over-favourable to the present Ministry. The particular point which renders the proposed scheme for revision unacceptable is that it contemplates immediate and absolute control by the Japanese authorities over Europeans, and offers no security or guarantee such as that given by the treaties of last year, which provided that European judges should sit on the bench in all cases in which Europeans were concerned. The European Powers are willing to take a tentative and guarded step in the direction of giving the Japanese control over their subjects, and signed the recent treaties with this view; but the Japanese want full and immediate control with no guarantee whatever. Moreover, it is said that, seeing Japan was the party to draw back from her own previous propositions after they had been accepted, it is rather precipitate to come forward now after a few months with a brand-new scheme in which all the safeguards that made the former one palatable are omitted. It will be seen, therefore, that the alarm of the foreign residents of Japan, who lately met to protest against the new project, is needless. Another very interesting piece of diplomatic information which comes to me at the same time has reference to the attitude of Germany in this matter. For many years Germany and the other Powers worked harmoniously with England in Japan. Two years ago Prince Bismarck, possibly thinking that the time for this diplomatic co-operation had come to an end, and that every Power should look out for itself in Japan, signed a treaty with that country while Lord Salisbury was negotiating one. It was generally said at the time that the Chancellor had stolen a march on us; but it was of little use to him, for the treaty, like others of a similar character with other nations, was not ratified. Nevertheless it was a distinct breaking away from the old system of friendly co-operation with England. I hear now that General von Caprivi, taking advantage of the new Japanese proposals, has returned to the old *entente cordiale* on this subject, and has brought Germany into line with England on Japanese questions.

The London and China Express, evidently

deriving its information from the same source, writes:—

So far as the present move of the Japanese Cabinet on the treaty revision question is understood in this country, the new proposal—that is, presuming it is the late draft, less the provision for foreign judges—is not considered at all acceptable. We believe, also, as the *Manchester Guardian* states, that the proposals are not even taken seriously, but have been mooted by the Japanese Cabinet to catch popular favour in Japan, in view of the near assemblage of the first Parliament. It was evident that all the European Powers and the United States were willing to agree to the proposals as made, and we know treaties on this basis had been signed, but the withdrawal of the one safeguard has completely altered the aspect. We can thoroughly appreciate the feelings of foreign residents, and the wherefore of the late meeting at Yokohama, the full report of which should shortly be to hand. It is not that the codes are not excellent, nor that the majority of the judges are not morally upright; it is the necessary experience to administer the laws that is lacking. Excellent codes are of no avail in the absence of the necessary highly-trained and competent judiciary.

Both the *Manchester* journal and its London contemporary are very ill posted in this matter, the latter newspaper especially. Their statement of the scheme put forward by Japan is seriously misleading, inasmuch as no idea was ever entertained of bringing any class of foreigners at once under Japanese jurisdiction, and their further assertion that Japan's proposals have not been taken seriously in Europe is diametrically opposed to facts. We have ceased to look forward where Treaty Revision is in the vista, but we have a shrewd suspicion that the two journals from which we have quoted will find themselves badly "left" one fine morning.

THE NEW YORK CHAMBER OF COMMERCE.

In a report of a recent meeting of the New York Chamber of Commerce, we find the following:—

W. B. Thurber, Chairman of the Committee on Foreign Commerce and the Revenue Laws, offered the following resolution, which was adopted:

Whereas, It is reported that negotiations are now pending between the Government of Japan and the United States Government for the revision of existing treaties between the two nations, which contemplate among other provisions, relinquishing extra-territorial rights now existing by which foreigners resident in Japan are subject to the laws of their own country; and

Whereas, The foreign residents in Japan are a unit in opposition to the relinquishment of such rights, as is shown by a mass meeting of foreign residents of all nationalities held in Yokohama Sept. 11, 1890, at which over 400 foreign residents were present, and resolutions opposed to this feature of such revision were unanimously adopted; and

Whereas, In the judgment of this Chamber such relinquishment would imperil the interests of American citizens, many of whom own real estate and other property in the treaty ports of Japan,

Resolved, It is the judgment of the Chamber that such action at the present time would be inexpedient and unwise, and we respectfully but earnestly protest against such action being taken.

Resolved, That a copy of the foregoing preamble and resolution be forwarded to the Secretary of State, with request for his immediate consideration.

CAPTAIN BOUGOÛIN.

On Saturday Captain and Mrs. Bougoûin left Tokyo by the 4.45 p.m. train, en route for France. The great popularity of Captain Bougoûin was evinced by the crowd of Japanese and foreigners who assembled at the Shimbashi terminus to bid him farewell. Among those present were the Minister President of State, the Minister of State and Vice-Minister of State for War, the Minister of State for the Navy, the Representatives of France, Germany, Austria, the Netherlands, and Hawaii, besides a large number of officials of high rank. During his fifteen years' residence in Tokyo Captain Bougoûin endeared himself to all with whom he came in contact, and few have ever left Japan more sincerely and generally regretted.

THE DERIVATION OF "MATSURI."

A WRITER to *Notes and Queries* of October 18th signing himself "A. Hall" refers to the long account which Sir Edwin Arnold recently gave of the Jours des Morts at (*sic*) Japan. The Japanese, he says "derive their custom from India by means of Buddhist missionaries; this is proved by linguistic evidence, for their term is *Non matsuri*, or Festival of the Dead. Compare *Matsuri* with Latin *mors*, morior, Hebrew *muth*, Arabic *mout*, Sanskrit *mar*, *mri*, *mrita*, Greek *μῆρος*, *μῆρας*, and our check-mate; while the Japanese King of the Dead is Enma San, where *Emma* is the Hindu *Fama*."

YOKOHAMA SKATING CLUB.

The annual general meeting of the Skating Club

was called for on Wednesday, but a sufficient number did not appear to constitute a meeting. It was decided by those present, after waiting a considerable time, to send round a circular inviting opinion as to whether the Club should be continued, or the proprietor of the ground, Aoki, be allowed to run the skating pond himself, with the disadvantages certain to result from such a course. The following are the accounts:—

SEASON OF 1889-1890.—J. O. AVERILL, HON. TREAS'R. IN ACCOUNT WITH YOKOHAMA SKATING CLUB.

To Balance from 1885-1889 \$ 20 57
To Subscriptions 34 @ \$1 \$ 34 00
To Subscriptions 3 @ \$4 12
114 00

1889. CR. \$134 57
Dec. 28. By first payment to Aoki on account of rink \$100 00

1890.
Jan. 8. By advertising annual meeting, "express," &c. 7 00
July 28. By Balance to Aoki for rink 25 00
By Balance carried forward 2 57

To Balance at credit of Club in Treasurer's hands \$ 134 57
E. & O. E.

Yokohama, December 10th, 1890.

J. O. AVERILL,
Hon. Sec. and Treas.

TICKETS FOR THE HOUSE OF REPRESENTATIVES.

EVERY member of the House of Representatives is entitled to procure admission for one friend daily, which means that three hundred visitors may be admitted by the members alone. This is of course inevitable. Admission is by ticket. Without a ticket one cannot even enter the enclosure where the Houses stand. Now it goes without saying that a Parliament being an absolute novelty in Japan, all sorts and conditions of people desire to make their way into one or other of the Chambers, and there, seated comfortably in a well cushioned gallery, to look down on a scene at once unparalleled and impressive, and to listen to a debate which is nearly always enlivened by the cropping up of some interesting point, or by a display of Japanese oratory. The consequence is that tickets are in great demand, and the *Mainichi Shimbun* says that some of the members from distant districts, who have no special friends to accommodate in Tokyo, have conceived the prudent plan of selling their tickets for a yen or two. This device might add a very pretty penny to the eight-hundred yen stipend of the members, many of whom are far from rich. But if some of the austere members come to hear of their needy colleagues' economical methods, there will be an unpleasant scene, we expect.

NEWSPAPERS AND THE DIET.

OURSELVES groaning under the weight of the extra and unremunerated burden thrown on our shoulders by the Diet, we read with envy that one effect of its opening has been to add largely to the circulation of the vernacular newspapers. The *Fiji Shimpō* says that in Osaka alone the post offices had to transmit the following increased numbers of newspapers:—On the 30th ultimo, 4,971; on the 1st instant, 4,450; on the 2nd instant, 9,711; on the 3rd 8,314; and on the 4th, 9,547. These additions mean that the total number of journals coming into Osaka has been nearly doubled by the opening of the Diet. Of course nearly the whole of this increase falls to the lot of our Tokyo contemporaries.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The collision between the House of Representatives and the Department of Justice, resulting from the detention of Mr. Mori, a member of that House, now occupies the most prominent place among the questions discussed by the vernacular press. The steps taken by the Lower House on this subject have met with the almost unanimous disapproval of the Tokyo papers. The circumstances relating to the ori-

gin of this controversy have already been recounted, and need not be repeated here. The communication which the House of Representatives sent to the Minister of Justice, embodying the resolution passed in that House, elicited a very decisive answer from the Minister to the effect that, as he has no authority to suspend a criminal proceeding unless in virtue of the express provisions of the Constitution, he had nothing to do with the resolution of the House of Representatives, the inevitable implication being that the Minister of Justice does not read the 53rd Article of the Constitution in the sense attached to it by the Representatives. After discussing various proposed modes of procedure, the House at last appointed, on the 9th instant, a special committee for the purpose of taking further steps. The matter stands now at this stage, and nothing is yet known as to the course to be pursued by the House.

As stated above, all the journals of the capital, with one or two exceptions, regret that the House of Representatives has taken at this important juncture a course of action that must inevitably cause friction between the Legislature and the Executive. A few quotations will illustrate the spirit in which this topic is discussed by the vernacular papers. The *Nichi Nichi Shimbun*, after summarizing the facts bearing on the subject, observes that the term "arrest" (*teisho*) in the 53rd Article of the Constitution, does not include any idea of detention, and that consequently the case of Mr. Mori does not fall within the scope of that article. Why—asks our contemporary—did not the House of Representatives resort to its undoubted power of legislation to pass a special enactment securing the privileges of its members, instead of founding its protest on a doubtful interpretation of the Constitution? Had the House adopted this course, the *Nichi Nichi* would not have hesitated to give it hearty support. The House will not be able, with any show of fairness or reason, to deny the justice of the answer given it by the Minister of Justice. In conclusion, the *Nichi Nichi* hopes that some happy method may be found to extricate the House from its embarrassing situation without compromising its dignity.

The *Mainichi Shimbun* deprecates the course taken by the people's Representatives as being at once unreasonable and impolitic. Our contemporary reminds them that they have no authority to determine the meaning of the provisions of the Constitution. In the case of a difference of opinion between the Legislature and the Executive concerning the interpretation of any article of the Constitution, the question can only be settled by appealing to a third power in the State. In the face of this plain truth, and in the face of the equally plain fact that the Judicial authorities took a different view of the case of Mr. Mori, the House of Representatives rashly adopted a suggestion of some of its members and formally notified the result of its resolution to the Minister of Justice, as if it were fully competent to decide a question of the interpretation of the Constitution. No wonder, then—continues our contemporary—that the House has received a decisive rebuff from the Minister of Justice. Important as is every point relating to the privileges of members, the *Mainichi* thinks this particular point nothing compared with the questions relating to the Budget and the "already fixed expenditures." When the House comes to discuss these questions, it will be found of vital importance to preserve a good understanding between the Legislature and the Executive. In view of this circumstance, nothing, concludes the *Mainichi*, can be more impolitic than to beget ill-feeling between the two for the sake of such a matter.

The *Nippon*, the *Hochi Shimbun*, and most of the other leading papers take a similar view. The only journals which seem to support the action of the House of Representatives are the *Fiji Shimbun* and the *Kokkai*. The former journal publishes an elaborate article on this subject from the pen of Mr. Ueki Emori, one of the

best known members of the *Rikken Ji-yu-to*. He makes much of the spirit of the 53rd Article of the Constitution. The *Kokkai* does not pronounce any opinion as to the constitutionality of the course followed by the Lower House, but seems to tacitly approve of it. As to the steps which the House may hereafter take, our contemporary observes that the next measure should be to make representations to the Emperor; and should His Majesty decide in favour of the Minister of Justice, it would then be necessary to enact a special law securing the privileges now claimed by the members of the House.

Count Yamagata's speech in the House of Representatives on the 6th instant has been a source of disappointment to the organs of the Opposition. The *Jiyu Shimbun* is glad that, while hitherto the lack of opportunity or inclination to publicly announce the policy followed by the Government has engendered feelings of mutual doubt and suspicion between those in power and those out of power, the Cabinet has now broken its silence and undertaken to make its ideas generally known. But our contemporary regrets that the Premier's speech only touched on the fundamental principles of the national policy, and that not a word was said as to the course which the Cabinet proposes to pursue in regard to important questions of practical politics. Passing on to consider the speech more particularly, the *Jiyu* takes up the question of national defence, on which so much importance was placed by Count Yamagata. Everybody is desirous of increasing the nation's fighting power, and of thus securing the independence of the country, but that is not, says the *Jiyu*, what it had expected to hear from Count Yamagata. The country must be informed whether the present Cabinet purpose to follow an offensive or a defensive policy. Judging from what the Premier said about the importance of defending what he termed the "cordons of interest," the Constitutional Liberal organ is inclined to conclude that the Cabinet is resolved to pursue an aggressive policy in its foreign relations. Should such be the case, our contemporary declares that the party it represents cannot support the Government. As to internal affairs also, the *Jiyu* regrets that the Minister President did not deign to declare his policy. In conclusion, the Government is invited to take an early opportunity of announcing more definitely the policy pursued in the foreign as well as the domestic affairs of the State.

The *Kokumin Shimbun* adopts a similar line of argument. It complains that the speech was too short and simple, but hopes that Count Yamagata may, to use his own words, "in a frank and unreserved manner," give the nation an opportunity of hearing more minute details of his policy in the course of the present session of the Diet.

The *Nichi Nichi Shimbun* and the *Tokyo Shimpō* are, on the whole, satisfied with the speech. But the tone of these papers, especially the latter, is too apologetic to command the attention of the public.

The *Jiji Shimpō* writes in its usual half-sarcastic tone. Count Yamagata having alluded to none of the important topics of current politics, his speech, says our contemporary, might as well have been delivered twenty years ago, and would be equally appropriate a hundred years hence. But under the present circumstances, our contemporary thinks that the Premier has done well to confine his remarks to such features of the national policy as cannot fail to be approved by every patriotic Japanese. It will, avers the *Jiji*, be best for the interest of the country that the Diet should, during the first years of its existence, confine its efforts to mere formalities, and commence its real work after some experience has been acquired of the constitutional system of Government. The *Nippon* expresses similar views on this subject.

Of the bills thus far introduced into the Diet by the Government, that relating to the relief of

the poor has attracted the largest share of journalistic attention. The Budget, which was laid before the House of the Representatives on the 6th instant, has also been commented on, but for the present the press keeps, with regard to this topic, silence which may be regarded as the calm before the bursting of a violent storm. As to the project of the Poor Law, the papers all recognize the importance of giving relief to the destitute, but unite in condemning the Government's project, the only journal defending it being the *Nichi Nichi Shimbun*. The project consists of twenty-four articles, and minute provisions are made for the mode of giving relief, for the classification of distressed people (*kyu-min*), and for the teaching of the poor while receiving relief. The money required for the purpose is to be defrayed out of either communal rates or the local taxes, according to the kind of persons receiving alms. The objections raised by the papers against the bill are, first, that it is opposed to the object of local self-government to introduce a uniform system of relieving the poor throughout the country, whereas the customs prevailing in this matter differ in different localities; and, secondly, that it is extremely difficult to distinguish between those who ought and those who ought not to receive alms, and that the inevitable consequence of the Law would be an increase of the poor throughout the country. Most of the papers, therefore, recommend leaving the matter to the management of each locality. The *Kokumin Shimbun* suggests the adoption of the system of compulsory saving followed in Germany, thus enabling the poor to help themselves. As to people who cannot be thus relieved, our contemporary recommends them to the charity of private individuals. The *Kokumin* further observes that the members of the Diet are in an embarrassing situation; for if they vote the bill, the Government will get the credit of caring for the poor, while if they reject it, they will be marked by the lower class as wanting in the sentiment of humanity. The only exit from this dilemma, in our contemporary's opinion, is to follow the example of Germany as above stated.

Another bill relating to Barristers has also provoked much unfavourable comment. According to the bill, barristers are to plead before the local Courts of Law for five years before they may practice in the Courts of Appeal, while another term of five years in the latter Courts is required before they can appear before the Court of Cassation. Moreover, they are required to pay 500 yen to have their names registered in the Court of Cassation, 300 yen in the Court of Appeal, and 100 yen in Local Courts. These two features of the bill are the principal points attacked by the papers. They say that the effect of the first provision will be to create a sort of monopoly among the lawyers, which cannot but be extremely injurious to the interests of the general public, while, as to the second provision, the journals fail to see any sufficient reason why barristers should be required to pay such heavy fees, or why the amount of the fee should vary according to the grade of courts of law. Another provision to which objection is raised, is that of the 45th Article, by which barristers already in practice are allowed the special privilege of having their names registered in any kind of courts they may choose, without having conformed to the above mentioned restrictions as to the term of practice in special courts of law or any other restrictions mentioned in the 8th Article. If it be really the object of the new law to improve the status of barristers, then nothing—the papers say—could be more injudicious than to give such a privilege to present barristers, for, the standard of examination having been formerly much lower than at present, there are many among those now in practice who do little honour to their profession.

The *Kokkai* takes the lead in discussing questions which bear either directly or indirectly on Japan's prestige abroad. We notice in a series of essays the racy and picturesque style of Mr. Shiga, one of the co-editors of the *Nippon-jin*, who was recently engaged on the staff

of the *Kokkai*. There is a lengthy article on Korea, which, however, we need not reproduce here, as it is substantially the same as an essay recently alluded to in these columns in reviewing the *Nippon-jin* of the 25th ultimo. Speaking of Japan's diplomatic officials, our contemporary recommends a thorough change of personnel in order to secure better efficiency. Speaking of the island of Saghalien, to which the attention of the Japanese people has recently been attracted by the report that Russia had established there six new convict stations, our contemporary advises the nation to turn its attention more to the north-eastern shores of the Korean peninsula, where the Northern Eagle is waiting for a favourable opportunity to fly at its prey. The *Nippon-jin* also directs the attention of its readers to the important strategical situation of the island of Rishiri off the Province of Teshio in Hokkaido. There is a fine harbour on the north-eastern part of the island, capable of giving safe shelter to ships of war. Wonder is expressed at the indifference which manifested by the nation to an island of so much importance. Writing on the seal fishing in the neighbourhood of Chishima (Kurile Islands), the same paper strongly recommends the authorities to send up a war vessel to protect the interests of the Japanese engaged in the business. There are now only three Japanese vessels engaged in the seal fishing, all belonging to the Japanese Marine Products Company. The Government is further advised to establish convict stations on these islands as a means of opening up communications between the capital and the outlying frontiers of the Empire. Writing on the Siberian Railway, the *Kokkai* assures the Japanese that, important as the opening of the line is from a commercial as well as a military point of view, there is nothing which justifies the extraordinary apprehensions apparently entertained by a section of the nation as to the effect of the completion of the line on the position of Japan vis-à-vis Russia. For the track being narrow, the line single, and many of the rivers and lakes which connect it being frozen during the greater part of the year, it would not be an easy task to despatch any large bodies of troops over such a road to so great a distance.

The *Mainichi Shimbun* continues its essay on the deficiencies of the country. Our contemporary writes of the insufficiency of the navy for the protection of the country. It then passes on to consider the question as to which ought to be principal and which auxiliary in the defence of the Empire, the Army or the Navy. It concludes that the Army should be principal, but that does not prevent the *Mainichi* from advocating the importance of giving attention to the naval equipments of the country. It considers the Navy to be at present utterly insufficient to do its work in the event of a foreign invasion. The *Kokkai* also devotes a long article to the discussion of the augmentation of the Navy, and heartily supports the project said to be contemplated by the Naval Authorities.

The *Hochi Shimbun* has published two essays from Mr. Sawai and Mr. Ishibashi proposing to employ an electric apparatus for the purpose of taking votes in the Houses of the Diet. The two plans slightly differ, but it is very curious that the *Hochi Shimbun* received the two essays almost simultaneously, as if each had known of the other's intention. The *Hochi* advises these scientific experts to complete their apparatus, and hopes that the Diet will adopt the new mechanism.

The *Jiji Shimpō* has commenced an extremely interesting series of articles on the future prospects of parliamentary institutions in Japan. The *Choya Shimbun* writes on several constitutional subjects, especially with reference to the Budget. The *Nippon* devotes several articles to the discussion of the question of party organization in Japan, and remarks that the time has arrived for the formation of true parties.

MR. MORI TOKINOSUKE AND THE DIET.

THE judgment delivered by the Tokyo Criminal Court in the case of MORI TOKINOSUKE, one of the members of the House of Representatives for the City of Tokyo, has been published. It runs as follows:—

Mori Tokinosuke, *shisoku*, occupation farming, of No. 179, Nippori-mura, Kitatoshimagori, Tokyo City, aged 58 years and 8 months, is arraigned at the instance of the Public Prosecutor on a criminal charge of unlawfully making away with funds entrusted to his keeping, according to the finding of the magistrates at the preliminary examination. The judgment of the Court is that the said Mori Tokinosuke, while he held the office of President of the Sixtieth National Bank and had control of the property of that Bank, received, on the 2nd of July in the 20th year of Meiji, while travelling in Fukushima Prefecture, the sum of six hundred yen on account of the said Bank from its Wakamatsu Branch, and instead of employing that money for the purposes of the Bank, expended it for his own use. Further, the Court finds that the accused, Mori Tokinosuke, while holding the office of President of the said Sixtieth National Bank and having control of the property of the Bank, did, on the 3rd of July of the 22nd year of Meiji, when visiting the Yamagata Branch of the said Bank, receive by process of transfer account and expend for his own use the sum of 2,530 yen, then lodged in the Seventy-second National Bank, in current account, to the credit of the said Mori Tokinosuke, being the proceeds of a portion of the property of the Seventy-second National Bank of Sakata which had been purchased by the Sixtieth Bank in the name of the accused. These facts are fully proved by the evidence of the complainants Takahashi Steroku and another; by the results of a search conducted at the residence of the accused; by the testimony of the referees Murakami Mitsuo, Miura Tokujiro, Okabe Yeiiji, Tsuge Katsuya, Shibata Kat-uhumi, Toki Yasuaki, Uyeda Meitetsu, and Mori Shozayemon; by the exhibits Nos. 2, 9, 14, 17, 20 to 25, and 27 to 33, produced by the complainants; by the letter of Okabe Yeiiji addressed to the accused; by the deposit notes for the sums of 2,820 yen, 2,530 yen, and 9,749 yen; by the letter of consent given by Honma Kokuo to Sekioka Koji; by a copy of the cash accounts of the Seventy-second National Bank of Sakata, and by the accounts of travelling expenses of the different branches of the Sixtieth National Bank during the presidency of the accused. The above two acts of the accused constitute the offence of illegally making away with funds held in trust, under the provisions of Article 395 of the Penal Code, the first clause of which directly applies to the case, and also under those of Article 100, which applies in respect of the simultaneous discovery of the two acts of fraud, and according to which the penalty is determined by the heavier of the two offences. The accused, Mori Tokinosuke, is therefore sentenced to one year's imprisonment with hard labour.

The documents and books used in evidence shall be returned to those who produced them.

It is further adjudged that the sum of 3,130 yen, being the total of the two sums of 600 yen and 2,530 yen, which is claimed by the prosecutors in the civil action, namely, Tanami Bengo, President of the Sixtieth National Bank, and Nishikawa Kambei, representing the Directors of the said Bank, being the amount unlawfully expended by the accused on the two occasions in question, shall be restored to the said prosecutors by the said Mori Tokinosuke. The costs of the civil suit shall be borne by Mori Tokinosuke.

Delivered on the 5th December of the 23rd year of Meiji in the Tokyo Local Criminal Court, in the presence of the Public Prosecutor Yamamoto Tetsugoro.

(Signed)

IHARA MORITOSHI, Chief Judge.
MOCHIZUKI GENJIRO, Assistant Judge.
HIDESHIMA KOICHI, Assistant Judge.
KOGA TARUICHI, Clerk of the Court.

It will be perceived from the above that MORI TOKINOSUKE was found guilty and sentenced to a year's imprisonment with hard labour on the very day after a motion relating to him was made in the House of Representatives. Now the Law of the Houses, which forms an addendum

to the Constitution, provides in Article 77, that "when a Member of the House of Representatives has lost any of the qualifications of eligibility mentioned in the Law of Election, he shall be considered as retired." Turning to the Law of Election, we find two articles bearing directly on MORI's case. The fourth clause of Article 14 says that persons who have been sentenced to confinement shall be disqualified until three years shall have elapsed since the completion or remission of their sentence; and the 17th Article says that any person against whom a criminal prosecution has been brought, and who is in detention or is under bail, shall be disqualified until the completion of the proceedings. It appears to us perfectly plain that, under these provisions, MORI TOKINOSUKE, on the 5th of December, lost the qualifications necessary for election, and consequently ceased to be a member of the House—became, in fact, "retired." It appears, further, that this was true not only from the 5th of December, but also from the day when MORI's guilt was sufficiently established at the preliminary examination to justify sending him forward to his trial. From that moment he became the subject of a criminal prosecution and his disqualification was established and remained effective until the completion of the proceedings. The proceedings ended, as we have seen, in a sentence of one year's imprisonment with hard labour, and from the time when the sentence was pronounced MORI forfeited his qualifications for an apparent term of four years. Summing up the situation, then, we have these facts, directly deducible from the Constitution and its appended Laws:—first, that a member of the Diet is free from arrest during the Session; secondly, that if he has been arrested and held for trial on a criminal charge while the Diet is not in session, he temporarily forfeits his qualifications and becomes "retired;" thirdly, that being thus retired, he ceases to possess the privileges of a member, and cannot claim the protection of the House to which he has been elected. The interesting point of all this is that, if we accept the provisions of the Laws appended to the Constitution, the motion made by Mr. SUYEMATSU SABURO with reference to MORI TOKINOSUKE is completely disposed of. Mr. SUYEMATSU contended that though MORI's arrest before the House was in session, nay even before it was constituted, might have been lawful, his detention without the House's permission became unconstitutional so soon as the Diet's session commenced. There was no question that the words of the 53rd Article of the Constitution refer, so far as the act of arrest is concerned, only to arrest during the session, and not to arrest before or after the session. This, indeed, goes without saying, for it is obvious that the or-

dinary course of justice cannot be delayed until the Diet assembles to set it in motion. But Mr. SUYEMATSU contended, and the House supported his contention, that the spirit of the Constitution is violated when a member of the Diet is held in detention during a session without the permission of the House to which he belongs. It is impossible to accept this view of the spirit of the Constitution simultaneously with the provisions of law which we have quoted above. Certain circumstances are distinctly enumerated, the occurrence of any of which disqualifies a member, and "retires" him from the House to which he has been elected. If these circumstances occur during the Diet's session, the privilege of freedom from arrest enables the member to temporarily avoid their consequences. But if they occur while the Diet is not in session, and if their disqualifying results become accomplished fact before the Diet assembles, then the member is *de facto* withdrawn beyond the pale of the Diet's privileges. This is precisely what happened in the case of MORI TOKINOSUKE. Arrested on a criminal charge before the Diet assembled, and before the date of its session was fixed, he underwent preliminary examination, and sufficient evidence of his guilt was adduced to warrant the magistrate in remanding him for trial. Then and there he temporarily lost his qualifications of eligibility for membership, and in consequence became a "retired" member, over whose fate the Diet ceased to be able to exercise any control. But here the great question arises—is the Constitution to be interpreted by the light of the Laws accompanying it, or is it to be interpreted by reference to the undoubted spirit of similar charters elsewhere. If we hold that the prime purpose of the 53rd Article of the Constitution is to ensure a member against all interruption at the hands of the Judiciary in the discharge of his parliamentary functions, then the Laws appended to the Constitution and quoted above are in apparent conflict with that purpose. The problem does not lend itself to easy solution. It is undoubtedly a matter for congratulation that the House should show itself jealously watchful of its privileges, and should stoutly resent anything resembling an attempt to ignore or transgress them. But the well wishers of parliamentary institutions in Japan cannot but regret that a question of such difficulty and demanding so large an exercise of dignity, judgment, and self-restraint, should have been offered for discussion by the Diet at the very outset of its career.

FOR OVERWORKED BRAINS USE HORSFORD'S ACID PHOSPHATE.

Dr. ED. T. JOHNSON, M.R.C.S., 121, Rice-lane, Walton, Liverpool, says:—"I have used it with very good results in cases of overtaxed and overworked brains, one in particular, a schoolmaster, where it acted like a charm."

THE SEISMOLOGICAL SOCIETY OF JAPAN.

THE last volume of Transactions of the Seismological Society of Japan is more than usually bulky, and contains a large number of maps and diagrams. The first essay, by Mr. L. F. BERTIN, describes the double Oscillograph and its employment for the study of rolling and pitching. This instrument is a very pretty contrivance by means of which curves are automatically traced, showing the motion produced in a floating body by the waves. The results obtained are not very remarkable, though decidedly useful to Seismologists, who have to measure waves of terrestrial motion by the aid of similarly traced curves. The second paper is on the "Seiches" of lakes. It is by Dr. F. A. FOREL, and has been translated and communicated to the Society by Professor C. D. WEST. "Seiches" are variations which take place in the level of lake waters. The surface of the lake is observed to rise slowly throughout a period varying from five minutes to half an hour, then to fall, and then to rise again, as though affected by a tide of low amplitude and short duration. They are due to a disturbance produced by atmospheric pressure on one part of the lake, and communicated gradually to the whole body of water: the lake, in fact, is shaken by a storm, and its waters throb just as the water in a basin which has been suddenly tilted. The interesting point about this matter is that Dr. FOREL has succeeded in investigating a formula connecting the time of oscillation of a demi-seiche with the greatest length or breadth of the lake, and the mean depth. Any two of these quantities being given, the third can be found. The accuracy of the formula has been remarkably verified by application to the seiches of Lake George in New South Wales.

We have then a short and clearly conceived description by Professor JOHN MILNE, F.R.S., of the remarkable instrument invented by him for measuring and recording the oscillatory movements of railway trains. Our readers are already familiar with this instrument, but the function that it is destined hereafter to serve in connection with railway travelling seems so important that we reproduce Mr. MILNE'S summary of its capabilities:—

1. As Train Timers.—Inasmuch as vibrations only occur while a train is in motion, portions of a diagram when no vibrations are recorded indicate the time that a train has stopped. The length of these blank spaces shows, in minutes or fractions of a minute, the duration of stoppages. By inspecting a diagram we can determine how long a train was on a given journey, whether it stopped at stations or signals, and from the length of the diagram on a known line it can be seen where the train went quickly and where it went slowly. The train is automatically timed. As the distances between stations are known it is an easy matter to determine average speeds. The speed at any position of a journey requires a mark to be made on the moving band of paper, say at every hundred revolutions of a wheel of the carriage in which the machine is placed. This is done by a simple contrivance now being applied to instruments in Japan. When passing curves, if the train is running at a speed

exactly suited to the cant of the rails, the diagram is written to the right and left of a central line. If it is going too slow, the diagram is written on the left of such a line, but if it is going too fast, or, in other words, if the speed is dangerous, the rollers are thrown outwards and the diagram is written on the right of the central line.

Grades are indicated by the tipping of the fore and aft rollers, and therefore they are shown by deviation to the right or left of the path traced by the writer when on a level track.

2. As the Recorder of the Condition of a Line.—No matter what the speed at which the train is travelling, or in what character of carriage it is placed, any abnormal motions show themselves as excursions on the general diagram. For instance, the jolts at facing points are particularly well marked. Irregularities due to variations in gauge, want of ballast, springy portions of the road, faults in ties or sleepers, irregular motions on bridges,—are all faithfully recorded. Sometimes movements are recorded which cannot be felt by passengers. For example, in crossing the Kawasaki Bridge, on the Tokyo-Yokohama line, it was noticed that on the down track on or about the second span there was always one large vertical movement recorded. The bridge, which is of iron, consists of a number of 100 ft. and a long series of 40 ft. spans. The movement, inasmuch as it could not be felt, must have been of the nature of an easy spring like bending.*

From the long series of diagrams which have been taken in Japan, America, and in England, it is clear that the diagrams give a report on the state of a line, and if these are repeated at intervals they show if changes are taking place.

3. As a Means of Testing Locomotives and Carriages.—For testing locomotives and carriages they should be run under similar conditions over the same line. The diagrams are drawn upon a band of paper running at a rate of about 1 inch per second. The result of this is that the vibrations are drawn out as a series of successive waves; with this diagram before us, we can measure not only the range of motion of any given wave, but also the time taken to describe this wave. Having measured these quantities, it is an easy matter to calculate the suddenness with which each movement commences to be made, and this is a quantity which may be taken as a measure of the jerks which are experienced.

Mr. W. B. MASON contributes a paper, accompanied by carefully compiled tables, demonstrating the importance of elaborating some uniform system of time-keeping for the purposes of seismological observation. At present a signal is sent every day at noon from the Central Telegraph office in Tokyo to stations throughout the Japan. By this means stations on the main circuit obtain accurate standard time, but for stations on branch lines manual operations intervene, and no certainty can be secured. The matter is one of great importance because, without mutually regulated time-recorders, the velocity with which earthquakes travel cannot be determined by direct observation. Following Mr. MASON'S paper is an essay by Professor C. G. KNOTT on earthquake frequency. We learn from this contribution that there is no truth in two notions long entertained, namely, that earthquakes are more frequent during the night than during the day, and that their periodicity is connected with lunar culminations. Mr. N. OTSUKA gives an interesting account of the great earthquake that visited Kumamoto in July of last year, and Mr. J. E. PEREIRA contributes a carefully compiled record of all the earthquakes noted by him in Yokohama from March, 1885, to December, 1889. Then we have an interesting dissertation on earthquakes of non-volcanic origin, by Mr. W. E. FORSTER. It has long

* The cause of this movement has been discovered and the necessary repairs made.

been known, or at least generally surmised, that earthquakes are the result of an underground displacement or explosion. Mr. FORSTER suggests that landslips on the surface of the earth may also be responsible. Dr. KNOTT, commenting on Mr. FORSTER'S theory, put the case very clearly:—

Honey-combed sea bottoms, overhanging ridges, steep descents, and broken contours seem to be a feature of certain seas and oceans; and there certainly landslips will occur from time to time, causing earthquakes throughout the surrounding material. Of course there is the more ultimate question as to the origin of this peculiar structure itself. Probably the crust of the earth is honey-combed and vesicular more or less all through; and it is easy to see that subterranean collapses and landslips might readily enough occur in the more unstable regions, started possibly by a volcanic explosion. We should naturally expect such vesicular structure to be more pronounced in regions that have been or still are volcanic. Every such change of configuration must result in the falling of material to lower levels, that is, if we neglect direct volcanic agency. Mr. Forster considers that, as such material near the surface of the bed of the sea falls in, its place is filled by water, causing a sinking of the sea-level. Hence will result an apparent rising of the land. However true a description this may be of what may be taking place in the Ionian Sea, it would be difficult to apply it generally to the great fact of the increase of land area throughout geological time. The ordinarily accepted view that the sea-level is a steadier surface than the surface of the dry land, and that the continents have risen as the ocean beds have sunk and the ocean channels contracted, is one of those very rational scientific views that took long to penetrate the mind of man; but once there, it will not be easily dislodged.

The remaining portion of the Transactions is occupied by essays by Professor MILNE, who displays the same untiring energy and industry that have always distinguished him. His diagrams of earthquakes recorded at the *Chiri-kyoku* in Tokyo, and his report on earthquake observations made in Japan during the year 1889 show how the Society's debt to him grows continually. More interesting, however, is his essay on the connection between earthquakes and electric and magnetic phenomena. It appears to be pretty well established that the approach of an earthquake is often, if not always, signalled by a strong electric disturbance, sometimes so strong as to break wires or interfere seriously with the transmission of messages. The cause of this curious fact still remains more or less obscure, but Mr. MILNE, with apparent reason, attributes the production of these electrical currents to mechanical motion caused by steam, chemical action, or other agencies in the solid matter of the earth's crust. With regard to atmospheric electricity, however, it is not so easy to arrive at a conclusion, and the same seems to be true, in a still greater degree, of magnetic disturbance. Professor MILNE'S paper is full of suggestions and ideas, and Professor KNOTT spoke truly when he said that "the Seismological Society and science generally are distinctly benefited by Professor MILNE'S peculiar faculty of ever opening up new lines of research." The observations of Professor KNOTT himself, in the discussion provoked by Professor MILNE'S paper, well deserve to be quoted. "There was not the least doubt," he said, "that the Krakatoa eruption had pro-

duced magnetic disturbances; and Professor SCHUSTER's recent discussion of the diurnal variation in the magnetic force at any point on the earth's surface enables us pretty well to explain the effect. It is well known that every day the magnetic needle moves first to this side, and then to that of its mean position. In Tokyo the amplitude of this diurnal oscillation is sometimes as much as 11 minutes of angle. Now SCHUSTER has shown, by an elegant discussion of GAUSS's theory of terrestrial magnetism, that this diurnal change is due to causes above us—electrical currents, say, brought into existence by the sun's action on a heterogeneous atmosphere. In the Krakatoa eruption immense clouds of dust were driven off into the higher atmosphere, and soon drifted round the whole globe, causing the remarkable sunset glows of the autumn of 1883. This dust, shot forth with immense velocity, would almost of necessity be electrified; so that we have the conditions for the existence of a highly electrified cloud of particles drifting along in the upper regions of the atmosphere. Such an electrical movement would have the characteristics of an ordinary electrical current, which might well affect the delicate magnetographs in India and Europe. But such an explanation cannot be applied to earthquakes. Professor MILNE, in his historical sketch, mentioned a hypothesis brought forward by an Italian, which seems capable of development into a plausible enough explanation of a relation between earthquakes and atmosphere electricity. It must be remembered that when we say the air becomes more negative, we might as truly say the earth becomes more positive. It is the *difference* of electrical conditions between the earth and air that is measured. Now any sudden change of state from liquid to aqueous we know to be accompanied by electrical change. Hence an explosion in some earth cavity might easily change the electrical condition of the earth in the vicinity. This electrical change on reaching the surface—it might be a little ahead of the shock—would affect the electrometer. It was, however, too soon, perhaps, to suggest explanations before the facts had been thoroughly established.

THE FATE OF A JAPANESE REFORMER.

MR. PERCIVAL LOWELL'S account of Viscount MORI's fate has no doubt attracted a good deal of attention, having been published originally in a widely circulated magazine, and reproduced by two of the local newspapers of this settlement. It is a prettily written essay. Mr. LOWELL always manages to state his facts or fictions and to advance his theories in an attractive guise. But like many another literary artist, he thinks of his art before everything.

It is in some respects unfortunate to have earned, or to be seeking to earn, the reputation of a picturesque writer. Such a man finds himself more or less in the position of the impressionist painter. His work must be always striking and always subjective; at once sparkling and original. The obligation is onerous, and its fulfilment frequently leads to such a profuse application of colour that the result dazzles and perplexes sober folks. We doubt whether due allowance is made for all this by critics of letters and essays about Japan which appear in Western papers and periodicals. The critic forgets that the first object of the essayist or correspondent is to paint a pen-and-ink picture. It is not a photograph that he seeks to present, but an attractive study. The subjective elements may be as much in excess of the objective as he pleases, provided only that the sum total is pretty and impressive. We do not think of taking Mr. LOWELL seriously when he sets himself to write contemporaneous Japanese history or to dissect Japanese character. A man of his subtle fancy and skilful pen is pretty sure to lay bare some truth and carry some conviction, but after all it is a glimpse of Mr. LOWELL'S mind that we get, not a presentation of things Japanese. The tragic fate of Viscount MORI was precisely the kind of subject that such a writer would be likely to take up, and it must be confessed that from a purely artistic point of view, Mr. LOWELL has not squandered his materials. We doubt, indeed, whether the fitness of things is not a little violated when such a story told in such a fashion, less than two years after the occurrence of the tragedy to which it refers, is committed to the pages of a sober magazine. A volume of semi-historical dramas would more fittingly contain the highly coloured and fanciful picture. As a dramatic work we should have nothing to charge against it except prematurity.

To one feature only of Mr. LOWELL'S conspicuously misleading account does it seem worth while to refer in detail. We mean that part of his picture where the homage paid to the grave of NISHINO BUNTARO is represented. This phase of the tragedy has never been fully comprehended by foreigners. Mr. LOWELL is conspicuously in the dark, and in his own light-hearted fashion he seeks to spread the same pall of misconception over the minds of his readers. He is convinced, or rather the exigencies of his art compel him to seem convinced, that virtually the whole of Japanese society secretly applauded NISHINO'S act, and that a considerable section of the population of the metropolis, not attempting to conceal their admiration, made pilgrimages to the assassin's tomb and burned incense or laid garlands before his sepulchre. Were Mr. LOWELL'S facts correct, the notes of admiration interlining his account would not be misplaced. But facts are dry, unattractive

elements in the eyes of the literary impressionist. Nothing is easier than to analyse the feelings that actuated Japanese Society when the tale of NISHINO'S deed and its results was first told. Mr. LOWELL himself has the materials at hand for such analysis, but does not think of making it. NISHINO BUNTARO was a youth educated as a gentleman. Up to the very eve of his murderous act he had led a life distinguished by more than ordinary traits of filial piety and moral regularity. Not the smallest taint of ruffianism disfigured his record. His family relations showed all the beauty of genuine domestic affection. The letters that he wrote to his younger sister and brother, as well as to his parents, on the threshold of the assassination, were touchingly simple and sincere. Beyond the fanaticism that drove him to shed blood, he was in all details a respectable and well-conducted unit of the population. So too of the purpose to which he sacrificed his life—the faith he had been taught to honour not only as the indigenous creed of his nation but also as the basis of his EMPEROR'S Sovereignty. Finally, he succeeded. Nothing succeeds like success, and nowhere is this truer than in Japan. That a solitary and physically weak youth, armed with nothing better than a kitchen knife, should make his way into the house of a Minister of State and stab to death one of the leading men of the empire, and that the deed should have been so timed as to coincide with the greatest event in Japanese history, the promulgation of the Constitution—here were elements to strike the imagination of any nation. NISHINO became not a hero but a marvel. The distinction is vital. It was clearly drawn by the leading Japanese journals at the time, though the clumsy language of some minor sheets may have created confusion. In any part of the world the burial of such a fanatic would have attracted crowds. In any part of the world, people would have visited his grave. In all this there is nothing surprising. We are far enough now from the event to speak of it without reserve. At the moment, however, there seemed some danger in so speaking of it. For though much of the attention concentrated on NISHINO might be referred to the working of nature's commonest emotions, a portion of it had evident connection with the still lingering creed of feudal times, that any deed of blood might be condoned by the voluntary sacrifice of one's own life. That is a dangerous doctrine anywhere, but especially dangerous in Japan, where the equilibrium between the old and the new has been temporarily disturbed, and where the youths of the country occupy for the nonce an exceptionally irresponsible position. The young men who carried NISHINO'S body to the grave undoubtedly lacked moral ballast. Like Mr. LOWELL himself, they preferred picturesqueness to decorum, and forgot that the new régime

for which they professed to be fighting could not retain its attachment to the old by links such as fanatics like NISHINO forged. But what a mountain Mr. LOWELL constructs out of this mole-hill. His airy edifice is graceful enough, and will doubtless strike the ignorant and thoughtless, but it is a pity that men of his ability should set themselves to mar history instead of helping to make it.

IMPERIAL PARLIAMENT.

[VERBATIM REPORT.]

HOUSE OF PEERS.

The House of Peers assembled at sixteen minutes past ten o'clock on the 4th instant. The business before the House was, first, the first reading of the Barristers Bill; secondly, the appointment of a Special Committee to consider the Bill; and thirdly, to consider an application for leave of absence presented by Prince Mori of Choshu.

The PRESIDENT, Count (Ito), announced that the House would proceed to consider the Barristers' Bill, and directed Mr. Yashiro, one of the Secretaries, to read the Bill, to which were appended the signatures of the Minister President of State and the Minister of State for Justice.

The Minister of State for Justice, Count YAMADA, who attended in the House to explain the Bill, said:—"The general purpose of this measure is set forth in the explanatory document accompanying it, but I desire to add a few words in order to make the principle of the Bill clearer, and to place you in possession of the object contemplated by its drafters. The Bill is framed for the better carrying out of the purpose underlying the revised system of organization of the Law Courts, and is laid before you in accordance with the fifty-seventh article of the Constitution, which provides that the organization of the Courts of Law shall be determined by law. In order to afford full protection for the person and rights of the subject, it is advisable that trials should be conducted not by a Judge alone, but that the assistance should be afforded of barristers rich in learning and experience and of high moral principles. To secure these essential attributes, to provide adequate means of determining the qualifications of legal practitioners, to guarantee their rights, and to contrive that their conduct shall be exemplary, are objects of national importance, as you all, my Lords and gentlemen, will, I am confident, agree. The details of the measure will be fully explained by the Government's delegates.

Marquis HACHISUKA, addressing the Government's delegates, said:—"I do not now desire particularly to know on what Occidental country's system this Bill has been founded. I wish to go a step farther, and to seek a full explanation of the reasons that have suggested this alteration of the Regulations for Barristers, hitherto in force.

Mr. KATO HIROYUKI:—"I have no doubt that Marquis Hachisuka's enquiry will elicit full reasons for the rescinding of the former Barristers Regulations, and the substitution of the present measure. But I find that the Bill provides for license fees and security money; that, in consequence, barristers practising in the Supreme Court and the Appeal Courts will require considerable funds. Looking at the question from the point of view of one not versed in legal affairs, I am disposed to doubt whether the number of barristers may not be inconveniently reduced by the operation of such a law. In the case of physicians it is possible to form an estimate of how many there should be for a given population, as, for example, one or two to every hundred persons. With barristers the question is doubtless different, but it seems possible that this difficulty may arise. Then again, I am perplexed as to the object of making distinctions in the cost of licence fees for practising in the different Courts, namely, the Supreme Court, the Appeal Courts, and the Courts of First Instance.

The PRESIDENT here reminded Mr. Kato of the limit of time allowed to each speaker.

Mr. KATO continued:—"Will not these distinctions prove vexatious to barristers? What necessity is there for such a classification? If barristers are to be divided according to the rank of the Court in which they practise, will not

a corresponding graduation of importance result? I desire to ask whether any reasons exist for distinguishing between the importance of the various Courts."

Mr. MURATA TAMOTSU:—"I desire to make one inquiry with regard to the Rules of Procedure of this House. The Rules state that at the First Reading of a Bill it shall be read clearly to the House, after which the Minister of State, the delegates of the Government or the proposer of the Bill may offer explanations. It may be owing to my own want of discernment, but this is not clear to me. The rule may be interpreted to signify that at the first reading the members cannot ask the Government's delegates for explanations. But it may also be interpreted to mean that they can ask for such explanations. It does not follow, therefore, that this right is denied to members, but I think that possibly the rule may be construed in the negative sense. Especially am I led to this conclusion by the words of the Minister of State who introduced the Bill, for he said that the details would be fully explained in Committee, from which I infer that these explanations are to be given, not to the House but to the Committee. The truth is that if the intention of the rule is that explanations may be sought by the members in session, there are many points in the Bill concerning which I have opinions to offer, and numerous features about which explanations are desired. Not only this, but in several respects the Bill is unintelligible to me. With reference to these various points I desire to put some questions, but it seems to me that if each member is permitted to prefer any queries he pleases to the Government's delegates at the first reading, much confusion must result. I have therefore refrained up to the present, but since I now observe that in both Houses questions are put to the Government's delegates and answered by them, I venture to ask you, Mr. President, whether it is within the competence of this House to seek further explanations at the present stage."

The PRESIDENT:—"With regard to Mr. Murata's enquiry, the words of the Fifty-sixth Rule are that explanations may be given by the Ministers of State, the delegates of the Government, or the member introducing the Bill. Nothing more is said. I conclude, therefore, that the rule does not contemplate the formulation of detailed inquiries or the holding of minute discussion at this stage. In the Forty-fourth Article of the Law of the Houses it is laid down that a Committee in meeting may, through the President, demand explanations from the delegates of the Government, from which it is plain that the intention of appointing a Committee is to have all the details fully examined, and to subsequently report to the House. It is for the Committee to make a thorough investigation of all the minutiae of a measure. The Bill now before the House has been read, and a general explanation of it has been given by a Cabinet Minister. In accordance, therefore, with the Thirty-sixth Article of the Law of the Houses, the business now before the House is the appointment of a Special Committee."

Mr. MURATA:—"I fully comprehend your explanation, Mr. President. I myself imagined that the rule must be interpreted in the sense you give to it, and your decision confirms my views. It is therefore understood that hereafter questions may not be addressed by members to the Government's delegates at the first reading of a bill. I pass now to another point. You have ruled, Mr. President, that the House should now proceed to elect a Special Committee, and referring to the Rules of Procedure I find it laid down in the first clause of the Thirty-sixth Article that the nine Committee-men shall be balloted for by the members, the voters' names not being written on the balloting papers; while the second clause of the same article provides that, on special occasions, the Committee may be nominated by the President and not chosen by the House. Doubtless the method prescribed in the first clause is natural and proper, but under certain circumstances the alternative method of the second clause may be desirable, and I venture to think that such circumstances exist now. I desire to propose that on this the first occasion of appointing a Special Committee, the task of nominating the Committee be entrusted to the President of the House. My reasons for making this proposition are that the operation of preparing and presenting balloting papers with nine names on each, and the counting of the votes in order to determine who has a majority, will involve a serious loss of time. Farther, the House has only just come together and the members cannot yet possess any intimate knowledge of one another. You, Mr. President, are more favourably circumstanced, and can make a fitting selection. Doubtless as a general rule, the House having been divided into Sections, it would be most convenient that each Section should choose one mem-

ber of Committee, since by that means due consultation and wise selection would be possible within the limits of Sections. But on the present occasion I would propose that you, Mr. President, should make a selection of any members you think fit, and I trust that the House will support my proposition."

Marquis NAKAYAMA:—"I wish to second the proposition made by Mr. Murata, as it seems to me a wise suggestion."

Viscount TORIO:—"I understand it to have been decided that questions cannot be put to the Government's delegates at the first reading of a bill. Such a decision appears to me very incorrect. This House has to be guided by two things only, the Law of the Houses and the Rules of the House of Peers. It is for the delegates of the Government themselves to determine whether or no they will answer questions. They are not obliged to answer, but to rule that questions must not be put at the first reading is very inadvisable. It seems to me that this is a point which concerns the prerogatives of the House. I protest very strongly against its being settled merely by a statement from the President and from the delegates of the Government. This is the first session of the first Parliament held in the Empire. I myself have no questions that I am specially anxious to put to the delegates of the Government, but I hold it to be exceedingly undesirable that a hard and fast decision should be recorded depriving members of the privilege of putting questions to the delegates of the Government at the first reading of a bill, and I have thought it right to bring this point to the notice of the House."

Mr. OKAUCHI SHIGETOSHI:—"It is plain that this point has a grave bearing on the interpretation of the Fifty-sixth Article of the Rules of the Upper Chamber, and that it also involves the question of whether this whole House shall or shall not abide by the rules. I therefore beg to suggest, Mr. President, that you give another distinct ruling. My reason for asking is that, according to my reading of the Fifty-sixth Article, it undoubtedly permits members to put what questions they please to a Minister who has charge of a bill, or the delegates of the Government. This view of mine is confirmed by the fact that, a short time ago, when Marquis Hachisuka and Mr. Kato put questions, the President did not rule them out of order, from which I infer that he did not consider their action a violation of the Fifty-sixth Article. The ruling made in answer to Mr. Murata's query seems to gravely affect the competence of the House. Replying to Mr. Murata's interrogation, the President ruled that questions could not be put, and Mr. Murata accepted the ruling as final. I cannot but think, however, that the Fifty-sixth Article confers the right to put questions, nor am I able to see that it admits of any second interpretation. When the rules were in draft this Article was numbered sixty, and it was amended to read that although members might put questions, they must not raise a debate. But the language was subsequently changed on the ground that the right to put questions did not require to be stated, being a matter of course. If members are puzzled about any point in a bill, it seems essential that they should be at liberty to put questions either to the Minister in charge of the measure or to the delegates of the Government. Of course the brevity or prolixity of a question depends upon the methods of the person putting it, just as the curtness or fullness of an answer is determined by the Minister in charge of the measure or by the delegates of the Government. The privilege of putting questions, the method of putting them, and the manner of answering them, must all, I think, be left uncontrolled. I beg therefore, Mr. President, that you will give the House fuller instructions about the import of the Fifty-sixth Article of the Rules."

The PRESIDENT:—"The member who has just spoken claims that as I did not prevent Mr. Kato from speaking, therefore the privilege of putting questions is accorded by the rules. But it was necessary to understand clearly the purport of Mr. Kato's speech, after which I proposed to state my views, and consequently I suffered the matter to pass for the moment. If this fashion of strict control is to be exercised in the Diet, the dignity of both Houses must suffer seriously. I therefore allowed the discussion to proceed. But when Mr. Murata put the point directly to me, I had no choice but to state my opinion. I do not wish to be understood as ruling that under all circumstances the questions referred to are out of order. Being asked to explain how I, as President, interpret the Article, I gave my view of the matter. It is in my province to do so. The Tenth Article of the Law of the Houses provides that the President of each House shall maintain order therein, regulate the debates, and represent the House outside its pre-

cincts. Again, the Hundred and forty third Article of the Rules of this House lays down that the President is competent to decide points of order. In the exercise of these powers I have declared my opinion. The speeches of Viscount Torio and of Mr. Okouchi have been delivered after my ruling that the business before the House is the election of a Select Committee. The matter had better rest there for the moment. With regard to Mr. Murata's proposal in relation to the election of a Committee, since it has been duly seconded, I purpose to proceed now with the business of election.

Mr. SHIMAUCHI TAKESHIKE said:—"I, too, Mr. President, desire to express my opinion about this matter of questions. The Minister of State for Justice has given us a general explanation in his speech, and further particulars are furnished in the explanatory document accompanying the Bill, but there are still many points that I do not fully understand. I should have liked to put questions about the most important of these points and to receive an explanation, for though there is to be a Special Committee to inquire into the details of the measure and to report to the House, I fear that we shall not by that process arrive at a thorough comprehension. It is doubtless an excellent plan that a Committee should be appointed to inquire into the details of the Bill, and indeed it is not probable that the members, were they allowed to put questions to the officials having charge of the Bill, would be ready to pronounce an immediate opinion. But it seems to me most desirable that liberty should be accorded to put brief questions of a general character and to receive explanations. The questions I should like to put are not long. I merely wish to know whether this Bill has been framed upon a foreign model, and whether in Western countries—"

The PRESIDENT:—"As I have already announced that the business before the House is the election of a Special Committee, I must ask you, Mr. Shimauchi, to postpone the remainder of your remarks."

Mr. SHIMAUCHI:—"Is it not permissible to express my opinion at present?"

The PRESIDENT:—"In the exercise of the powers vested in me for the purpose of preserving order and regulating the debates in the House, I have already announced that the business now in hand is the election of a Special Committee, and I must beg your attention to my ruling."

Mr. SHIMAUCHI:—"It is my opinion that by permitting questions to be put with regard to important points, the President's function of regulating the debates will be facilitated."

The PRESIDENT:—"I have not ruled that you must refrain from expressing your opinion, Mr. Shimauchi, but only that you must postpone doing so."

Viscount MATSUDAIRA NOBUMASA:—"I understand that the question before the House is the election of a Special Committee, and that we are asked to decide whether the election shall be by ballot, or whether the President shall be asked to nominate the Committee. I am opposed to the proposition made by Mr. Murata in the latter sense. I do not think that the nomination should be left to the President. Election by ballot is the course contemplated by the rule under ordinary circumstances. Nomination by the President is an alternative course. I do not like the notion that at the outset of this House's proceedings, we should make celerity our principal object, and for its sake adopt the alternative rule. Already for the sake of despatch we entrusted to our President the reply to the Imperial Message, but in a matter of this kind, it is more proper that our Committee should consist of members chosen by the majority of the House. Experience shows that people are ready to put more or less confidence in work done by their own nominees, but prone to question the work done by the nominees of others. I therefore prefer that the election be conducted in accordance with the provisions of the first clause of Article 36."

Baron WATANABE KYOSHI:—"I entirely agree with the views expressed by Viscount Matsudaira. I do not approve at all of resorting to alternative rules at the commencement of our parliamentary career. It seems to me that the time to resort to abbreviated methods is when the House finds itself confronted by an accumulation of business, and when despatch becomes essential for the sake of getting through work. At this early period of the session, I think that we are bound to follow the full routine prescribed by the rules. I endorse Viscount Matsudaira's view."

The PRESIDENT thereupon called upon the members who approved of Mr. Murata's motion to stand up, but only a minority rose, and Viscount Watanabe's proposal, being then put, was carried.

Mr. MURAKAMI KEISAKU:—"The House being now about to proceed to business under the pro-

visions of Article 56, is it permissible to express an opinion? May members address questions to the Delegates of the Government, or must they abstain from doing so?"

The PRESIDENT:—"The House cannot hear you distinctly. Will you please ascend the rostrum."

Mr. MURAKAMI:—"Marquis Hachisuka and Mr. Kato preferred some enquiries a short time ago under the Fifty-sixth Rule of this House's procedure, and the President ruled that the discussion must be deferred. I desire to put a question on that subject. Mr. Shimauchi propounded some queries, but was stopped by the President as being out of order. It has now been decided that the business before the House is the election of a Special Committee, and it appears to me that the convenience of the House will be best consulted by determining now whether questions can or cannot be put by members to the Government's Delegates at a First Reading."

Mr. YAMAGUCHI SHOHU:—"A good deal of discussion has been raised about the reading of the 56th Rule of the House, despite the fact that the President has given a ruling about the business in hand. I am sorry to trouble the House, but I feel it necessary to speak a few words. The 56th Article says that at the first reading, when the contents of a bill have been clearly read to the House, a Minister of State, the Government Delegates, or the member introducing the bill may explain its object. There the article stops, and passing to the next article, we find it provided that at the conclusion of the process described in the preceding article, the bill, whether it emanated from the Government or in the House, should be entrusted to a Committee. In accordance with these articles, the President has already ruled that the business before the House is the election of a Committee, but in the face of this ruling a discussion has been raised by members desiring to put questions in relation to the bill. Now I think it is plain that the privilege of putting questions is neither withheld nor granted by the latter of these Articles, but it appears to me that if we consider the spirit of the Articles they must be held to interdict such questioning. Provision is made for the putting of any number of questions in Committee, but the House is not the place to put such questions at this stage. As to whether they ought to be put in Committee or in the House, if they are preferred in the House, Mr. Murakami—"

The PRESIDENT:—"If you are about to speak at length, please come to the rostrum."

Mr. YAMAGUCHI:—"It is unnecessary."

The PRESIDENT:—"Then I have to warn you."

Mr. YAMAGUCHI:—"I will say nothing more, Mr. President."

The PRESIDENT:—"The House will proceed to elect a Committee. It will be well perhaps to remind you that the rules of Procedure were determined by the House itself, and the President equally with the members has to obey Rules thus enacted. The 86th article says that the interpretation of the rules rests with the President. In the exercise of the authority thus vested in me, I have replied to queries put by members. I bring this to your notice, as I am anxious that I should not be supposed to have acted in excess of the powers entrusted to me. We now proceed to the business of election as already determined. Has the House any opinion to offer with regard to the number of the Special Committee?"

Viscount MATSUDAIRA NOBUMASA:—"I propose that the number be twice nine, namely, eighteen. Nine is no doubt a convenient number, but as Mr. Murata has explained, the members have not yet any thorough knowledge of each other's qualifications. I think therefore that two members from each Section would form a suitable and convenient Committee. As a general rule one member from each Section would suffice, but since want of mutual knowledge renders selection difficult, I propose that the Committee consist of two members from each Section, or eighteen in all."

Mr. OKAZAKI SABURO:—"With regard to this discussion about the number of the Committee, I am of opinion that nine will be sufficient. You do not ensure greater accuracy of investigation by bringing together a greater number of persons to conduct the inquiry. I think that even nine is too many. The Thirty-sixth Article gives nine as a minimum below which we cannot reduce the Committee. I propose that we adopt that number, and I trust that the House will accept my view. I think there is a slight error in the statement just made by Viscount Matsudaira. He has probably thought of a process of election similar to that hitherto pursued by the Sections, namely, balloting for one name at a time. But if the Sections have to choose two members each, as is the case in electing a Committee, you are not likely to obviate the difficulty of mutual ignorance by making each member write two names on his balloting paper instead of one. Of course if you do not care what

time you devote to the business, you can vote for one name at a time, but I see no necessity for that, and I therefore propose that we make the number nine, as provided in the Thirty-sixth Article. I trust that the House will approve my suggestion."

Mr. SHIMAUCHI TAKESHIKE:—"I am of opinion that eighteen is a better number, and therefore second Viscount Matsudaira's proposal. I shall state my reasons for this view, because otherwise I should not be doing justice to Viscount Matsudaira's suggestion. Since it is not provided that the Committee, whether nine or eighteen, must be chosen from the whole House, we may assume that it must be elected from among and by the Sections. Now if we could be sure of having good men only from each Section, then we might be content with the small number of nine. But if there happens to be one incompetent member among so few, the thoroughness of the Committee's investigation may be impaired. I therefore support the motion for a Committee of eighteen."

Mr. MURAKAMI KEISAKU:—"I shall vote for Mr. Ozaki's proposal, and I trust that the method of balloting prescribed in Article Thirty-six will be adopted, namely, that each Section shall choose one member, and that the Committee shall consist of nine."

Mr. YAMAGUCHI SHOHU:—"I am in favour of adhering to the Rule and electing nine Committee-men. My reason for opposing Viscount Matsudaira is that if we are to elect eighteen members we shall be obliged to give the whole day to the task. It is a matter of arithmetic. There are two hundred and fifty-two members present, and even if they elect only nine Committee-men they will have to write 2,268 names, and these names will afterwards have to be read over and their votes reckoned up. Do what we may we shall have to devote the greater part of the day to this task, and for that reason I think that the proposal made some time ago by Mr. Murata ought to have received more consideration from the House. That, however, cannot now be helped. But as the House is commencing its first session I think that, apart from the question of time, the letter of the rules should be adhered to as strictly as possible. If there were any imperative reason for electing eighteen members, the case would be different, but since there is not, let us follow the rule and elect nine Committee-men. It is enough, too much indeed, that we should spend a whole day over such a task."

The PRESIDENT:—"What does the House think? Would it not be better that the voting should proceed without prolonging this discussion? Of course it is for the House to decide. It is merely a question of wasting time."

Viscount NAGAOKA MORIYOSHI:—"Let us settle the matter at once."

The PRESIDENT:—"Then I will ask those who approve of Viscount Matsudaira's proposal to stand up."

(A minority rose.)

The PRESIDENT:—"The proposition is not carried. We proceed—"

Count HIGASHIKUZE:—"Mr. President."

The PRESIDENT:—"Have you a question to ask?"

Count HIGASHIKUZE:—"I understand that we are about to proceed with the ballot. It will take a long time and carry us considerably past noon. It is very nearly twelve o'clock now. Perhaps it would be better that the House should postpone the ballot until one o'clock, or half-past twelve. I beg to suggest that course."

The PRESIDENT:—"I adopt the suggestion as to the ballot. It will be postponed until the afternoon. But as there is still some time before noon I call upon Mr. Murata."

Mr. MURATA:—"I did not say anything just now, but I was much surprised at the idea of appointing an even number of Committee-men. Unless a Committee consists of five, nine, or some uneven number, it may be equally divided on any question, and the result would be embarrassing. It has always been the habit to make Committees consist of an odd number of members, and I trust that a custom dictated by experience will not be departed from in future. That was all that I wished to say."

Mr. OKAZAKI SABURO:—"Count Higashikuze suggested just now that as it is nearly noon the House had better adjourn until after luncheon. It is within the competence of the President to decide such a question, and if the balloting which we were on the point of undertaking must be deferred until the afternoon, nothing more need be said. But it still wants forty-five minutes to noon, and I cannot see any necessity for taking so long a recess. I propose, therefore, that arrangements for the balloting be commenced at once. There is other business which I wish to bring before the House, but I have postponed doing so, and it appears to me unadvisable to devote more than an hour to luncheon."

I would urge the expediency of going on with the balloting. If the House desires to take a recess at once for luncheon, that settles the question, but if there is any doubt about the point, I beg to suggest that the opinion of the majority be taken.

VISCOUNT HIRAMATSU TOKIATSU:—I also trust that the business of balloting will be proceeded with, as Mr. Ozaki suggests.

THE PRESIDENT:—If you desire to have it so, then I revoke the decision made in compliance with Count Higashikaze's suggestion, and we shall proceed forthwith to ballot.

MR. MITSUKURI RINSHO:—As the House is about to ballot, Mr. President, I ask your permission to take my place as a member, though I appear to-day as a Government Delegate.

THE PRESIDENT:—Are you a member of the House.

MR. MITSUKURI:—I am.

THE PRESIDENT:—Then there is no objection.

MR. MITSUKURI proceeded to his Section, and the Secretaries distributed balloting papers. The papers having been collected, the President ordered Mr. Yashiro, one of the Secretaries, to read out the names.

The result of the ballot was as follows:—Mr. Murata Tamotsu (121 votes), Mr. Hozumi Chinchō (121), Mr. Ozaki Saburo (113), Viscount Kano Hisayoshi (95), Mr. Kato Hiroyuki (77), Mr. Okanishi Shigetoshi (67), Mr. Hosokawa Junjiro (63), Viscount Kyōka Kocho (61), Mr. Imamura Waro (57).

THE PRESIDENT:—The above members have received a majority of votes. The names next on the list have received so few votes that it is unnecessary to read them to the House. These nine are therefore elected to form a Special Committee. The next business before the House is an application for about fifty days' leave, on account of sickness, from Prince Mori. According to the Eighty-first Article, leave of absence for more than a week can be granted by the House only, but I presume that it will scarcely be necessary to put this question to the vote. If no member raises an objection, I shall assume that the House is agreed. In the afternoon it will be necessary to elect from among the Committee-men a President of the Special Committee just appointed, after which the Bill will be entrusted to the Committee in accordance with the decision of the House. To-morrow there is no Bill to be considered, and the House will consequently adjourn until the day after to-morrow, the 6th instant, at one o'clock in the afternoon. I now proceed to announce the order of business for that day:—First, an application for leave of absence from Prince Shotai; secondly, the first reading of the Weights and Measures Bill submitted by the Government; thirdly, the election of a Special Committee to take charge of the Bill.

VISCOUNT TORIO:—I desire to make a brief statement of a subject calling for discussion, so that it may be taken whenever the order of daily procedure gives an opportunity. A law, of which I do not recall the number at this moment, has been promulgated fixing the penalties to be imposed for breaches of Ordinances. In my view that law is distinctly contrary to the Constitution. The Seventy-sixth Article of the Constitution says that "existing legal enactments, such as laws, regulations, Ordinances," or by whatever names they may be called, shall, so far as they do not conflict with the present Constitution, continue in force." It appears to me, judging by this Article, that if the Constitution is to have any force, any law conflicting with it must cease to be operative so soon as the Diet is opened. The Ninth Article of the Constitution says that "the Emperor issues or causes to be issued the Ordinances necessary for the carrying out of the laws, or for the maintenance of the public peace and order, or for the promotion of the welfare of his subjects," and it may be that the Government, regarding the law to which I refer as issued in accordance with the provisions of this Ninth Article, considers it to be in accordance with the Constitution. But if the law be put into operation, it will conflict with the Constitution, and the Government will be in the position of having enforced a law opposed to the Constitution. That would be a very serious matter, and before it happens—

THE PRESIDENT:—Are you making a representation, or in what sense are your remarks preferred?

VISCOUNT TORIO:—I propose to make a representation, and I desire to have my intention included in the orders of the day.

THE PRESIDENT:—Do I understand that you wish to make a representation to the Government?

VISCOUNT TORIO:—Certainly. I purpose making a representation and also bringing the question before the House. I shall also propose an amendment of the law to which I refer, so that it shall no longer be in conflict with the Constitution:

THE PRESIDENT:—In that case I refer you to the Fifty-third Article of the Rules of the House, where it is provided that if a member wishes to bring in a bill relating to laws, or to make an address to the Emperor or a presentation to the Government, he must hand to the President a draft of his proposal, together with a statement of his reasons, signed by the prescribed number of supporters, whereupon the President shall cause these documents to be printed and copies handed to each member. It will be necessary to conform with that procedure.

VISCOUNT TORIO:—I shall do as you direct.

THE PRESIDENT:—The House will now adjourn. The House rose at 1.49 p.m.

HOUSE OF REPRESENTATIVES.

The debate opened at 55 minutes past 1 o'clock p.m. on the 4th inst. The business before the House was, first, the case of a member of the House arrested before the session, and kept in jail after the session had been commenced (motion by Suyematsu Saburo); secondly, the election of a committee for determining the qualifications of members.

THE PRESIDENT:—I have to report to the members that according to a notice from the Minister President of State, Mr. Shirane Senichi, Vice-Minister of Home Affairs, acting as the Government's Delegate for the Poor Laws Bill ("please speak louder, Mr. President") and Mr. Mitsukuri Rinsho, Doctor of Law, and Vice-Minister of the Judicial Department, as Government Delegate for the Barristers' Bill, will attend in the House. I have also to report that two members, Messrs. Hoki Hatsu and Chiba Teitaro, have not come up to Tokyo on account of illness, and that Mr. Mori Tokinosuke does not attend on account of being in jail. I also wish to draw the attention of the gentlemen of the Standing Committee to the duty of electing a Chairman of Committee, which is a matter of urgency.

MR. SUYEMATSU SABURO:—I learn that there was a notice from the Minister of State for Justice with reference to Mr. Mori Tokinosuke's being kept in prison. I request that the notice be read.

THE PRESIDENT:—In accordance with the request of Mr. Suyematsu, the notice from the Minister of Justice will be read by the Chief Secretary.

MR. SONE, the Chief Secretary, reading:—"To Mr. Sone Arasuke, chief Secretary of the House of Representatives. I give you notice that Mori Tokinosuke, an elected member of the House of Representatives, is now under trial and in jail in the Local Court of Tokyo, being charged with unlawfully making away with articles entrusted to him. 24th November, 23rd year of Meiji. (Signed) Count Yamada Akiyoshi, Minister of Justice."

MR. SUYEMATSU KENCHO:—Before the debate commences, I wish to make a statement about the orders of the day. Have I permission to do so?

THE PRESIDENT:—Is it solely about the routine of procedure that you wish to speak, Mr. Suyematsu?

MR. SUYEMATSU KENCHO:—Yes; I have no other point to discuss.

MR. SUYEMATSU SABURO:—As I am to open the debate, I beg to express the hope that the member may be permitted to speak if his object is to discuss the orders of the day only.

MR. SUYEMATSU KENCHO:—What I have to say refers to the procedure as daily announced. In the notice I find a simple mention of the fact that a member is detained in prison. I am unable, therefore, to comprehend what sort of motion is to be made. As the subject of the motion is not recorded, it is impossible to form any opinion either in favour of or against it. The notice may suffice on this occasion, but with such a vague record there is no advantage gained by giving an intimation beforehand. In future, I propose that the subject of each motion be recorded in the daily statement of business. Also with reference to the Committee for Qualifications, it is simply recorded that a Committee is to be elected. But there must be somebody to make the motion. Unless the name of the mover is given, the orders of the day will not effect their purpose.

THE PRESIDENT:—In the preceding session, Mr. Suyematsu Saburo made a motion, which was seconded. I call upon Mr. Suyematsu Saburo to open the debate to-day.

MR. SUYEMATSU ascended the rostrum and said:—I made a motion at the last session, and was directed to send in the subject of the motion to the Chief Secretary. I did so. It is contained in the orders of the day. But as no precise statement of the motion is given, Mr. Suyematsu Kencho's objection seems quite reasonable. I think it better to read my proposal first, and then to speak to it. I will first read my proposal, then give an ex-

planation, and finally state my views, which I hope you will endorse. My motion is that the member of the House of Representatives—

MR. OYE TAKU:—Reading to the House is against the regulations. I hope the member will be stopped.

MR. SUYEMATSU SABURO:—The duty of keeping order rests with the President. If three hundred persons all undertake to regulate the meeting, it will be impossible to have any approach to order. You say that the reading of a proposition is not admissible. Do you then say that Bills cannot be also read? What I am doing now is the same as reading a bill, for I am reading to the House a proposal upon which it has to decide. Where is there any regulation forbidding such a proceeding? I ask for the decision of the President. If you insist on stopping my reading, I should like to know by what regulation you do so. It seems to me very singular that such an opinion should be advanced by a member. If we are forbidden to read we can of course resort to speaking, but it suits my convenience to read, and whether to read or speak is strictly within my right.

MR. YAMADA TOJI:—I think that reading should be stopped according to Art. 112 of the Rules of the House.

THE PRESIDENT:—It is my ruling that according to Article 112 of the Regulations an opinion or explanation cannot be read, but a matter for purposes of reference or report may be read.

MR. SUYEMATSU SABURO:—I consider this restriction very inconvenient, but I bow to the President's decision for the moment.

MR. SUYEMATSU KENCHO:—I disagree with the objection just made, and ask the President to permit the reading. This is a matter affecting the rights of members. There is no reason why a proposition, equally with a bill, may not be read. In my opinion, any written proposal, that is to say, a document containing matter to be decided by the House, can be read. Indeed, it ought to be read, because should there be occasion to amend the words of the proposal, accuracy of amendment would be out of the question if a mere verbal statement had to be depended on. Therefore a proposal, equally with bills to be considered by the House, should be read. A motion is always required to be made in writing and that fact alone points to the natural consequence, namely, that it should be read. I urge this point, as it touches the privileges of members of the House.

MR. TANIMOTO MICHIOYUKI:—Article 112 cannot be altered. We should be controlled by the Rules of Procedure. It is not proper to alter them so suddenly, without sufficient cause. The reading should be forbidden in accordance with Article 112.

MR. OKA JIRO TARO:—I second the opinion of Mr. K. Suyematsu. Art. 112 refers to an opinion or explanation. I consider that there is no objection to reading a proposal.

MR. YAMADA TOJI:—The President just now—

THE PRESIDENT:—Wait a minute. I ask Mr. Suyematsu whether he means to say that what he is about to read is neither an opinion nor an explanation.

MR. SUYEMATSU KENCHO:—It is neither an opinion nor an explanation.

THE PRESIDENT:—With regard to the reading of an opinion or explanation, the provisions of Article 112 of the Regulations are conclusive. Mr. Suyematsu Kencho's motion to allow the reading of the resolution has been seconded. I will put the question to the House without debate. Those who are in favour of allowing the reading will stand up.

(At this point some confusion ensued, and members called out that they did not understand.)

MR. TAKATA SANAYE:—According to the regulations of debate, more than one person at a time is not allowed to speak. But now Mr. Suyematsu is in the rostrum, while other persons are making speeches, and the President calls for a division. This is incomprehensible. I think that Mr. Suyematsu should resume his seat.

THE PRESIDENT:—I repeat my request that those who are in favour of Mr. Suyematsu's motion for allowing the reading will stand up. (Renewed cries of "I don't understand.")

The majority rose.

THE PRESIDENT:—I find that the majority has voted in favour of the motion. (Here a member protested against the decision as illegally taken.)

MR. SATAKE GIWA:—Mr. Suyematsu Saburo was not in his seat but remained standing where he is now, when the question was put to the vote. Is that correct?

MR. SUYEMATSU SABURO:—Where is the law that I should not have stood here?

MR. SATAKE GIWA was proceeding to discuss the point, when he was interrupted by cries of "Order."

THE PRESIDENT:—Mr. Suyematsu Saburo.

Mr. SUYEMATSU SABURO:—Shall I continue my address?

The PRESIDENT:—Yes. You may read your resolution.

Mr. SUYEMATSU SABURO:—I have at length received permission to read my proposition as I wished to do. I do not wish it to be understood that without reading it I could not have spoken, but as I have the right to read it I was about to do so when the President stopped me. The House, however, has supported my view, and I proceed to read:—"A member of the House of Representatives arrested before the House is in session cannot be kept in arrest after the session commences without the permission of the House." That is my motion. You are acquainted with the provisions of the Fifty-third Article of the Constitution. I might read it to you for purposes of reference, but it is unnecessary to do so, since you all know that it says that the members of both Houses shall, during the session, be free from arrest, unless with the consent of the House, except in cases of flagrant delicts or of offences connected with a state of internal commotion or with a foreign trouble. A case directly connected with this Fifty-third Article presents itself for your consideration. I imagine you have heard about Mr. Mori Tokinosuke, one of the members for the City of Tokyo. As you were informed by the notice just read by the Chief Secretary, the Minister of State for Justice reports that Mr. Mori Tokinosuke is imprisoned on a charge of unlawfully making away with property entrusted to him. The notice is dated the 24th of November, and addressed to the Chief Secretary, who was then Acting-President. This affair seems to me to gravely affect the privileges of the House. I consequently sought to make it the subject of a motion on the 25th ultimo, but was not allowed to do so. Not only was I ruled out of order by the Acting-President, but the majority of the House supported his ruling. I confess that this caused me much surprise. I deemed it very strange that this House should thus, of its own accord, surrender its privileges, but of course the voice of the majority silenced me. And now again when I renewed my motion of the 25th, I was stopped by the President, so that only at the present moment, a week after the opening of the Diet, I am enabled to bring this most important question before the House. The sin of such delay does not rest with me. Possibly the annals of the House will record that the crime is not mine but that of another member. I have become an object of suspicion in connection with this motion. Some petty persons say that I am acting in Mori Tokinosuke's behalf, or that I have been asked by his friends to contrive his release from prison. I have heard that something of the kind has appeared in the public press. There can scarcely be any necessity to dispel that suspicion. All those who have any knowledge of me will easily understand that I am not such a member of the Diet as these imputations indicate. Nevertheless, to remove all question, I wish to tell the House that I have never met Mori Tokinosuke but once.—(Cries of "Never mind that.") It is not for members to cry "Never mind that." The President alone is entitled to do so. Such a proceeding is allowed in provincial assemblies, but not by the rules of this House. I have only met Mori once. I have had no intercourse with him, not even of a political nature. If you ask me why I make this motion, I reply that it is not for the sake of Mori Tokinosuke, but because Mori Tokinosuke is a member of this House. It is within the privilege of this House to permit or not to permit his detention. What course do you purpose taking, gentlemen, about your privilege? This question I wish to propound, and I have also to remind you that it is a question of great importance. You know that the Fifty-third Article of the Constitution says, and you can scarcely doubt that the detention of Mori is a violation of it. I will explain the point more fully. In the first place, it is perfectly clear from the Fifty-third Article of the Constitution that a member cannot be arrested during the session without the permission of the House. Some, however, will perhaps say that a member may be arrested before the Session commences, or that, if arrested before it commences, he may be held in custody afterwards. Now I think that before the Diet was called into existence, and consequently before its permission could be given or refused, the judicial authorities had power to make the arrest. I raise no question whatsoever about the act of arrest. But after the Diet has commenced its session, to keep one of its members in arrest because he was arrested before the session began is to violate the spirit of the Constitution. I do not know whether there be among the members of this House any hairsplitters disposed to rely on the mere verbal question of "before the session" and "during the session," but the spirit of the Constitution is not

that kind of thing. The Constitution says "during the session," and there can be no mistake about its meaning. If there be any question of mistaking the language, what do you suppose the spirit of the Article to be? How do you interpret the spirit of the Constitution that fixes the privileges of the Diet? We have a guide to the spirit of the Constitution. True it is only the view of one person, but it nevertheless enters into the spirit of the Constitution more or less on public principles. I refer to Count Ito's Commentary, which I have here with me, and from which I shall read for purposes of reference. In relation to the 53rd Article it says:—"The two Houses of the Diet cooperate in the important affairs of legislation. Accordingly, special privileges are granted to the members during the session, so that they may maintain an independent position, and be able to discharge their important functions." Of course this interpretation, being that of an individual, cannot be accepted as final, but in my opinion it is the true interpretation, and in accordance with the spirit of the Constitution thus interpreted I seek to preserve the independence of the House and to guard its functions against interference. The Diet has to cooperate with the Legislature, and neither the Executive nor the Judiciary should exercise its power so as to interfere with the Diet's functions. If the opposite view be held, namely, that which relies on the arrest having been effected before the session began, then there will be nothing to prevent the arrest of ten or even fifty leading members of the House during next year while the Diet is not sitting, and their detention pending a decision of the Court of First Instance during the three months of the Diet's session. I do not suggest that any such improper use of the executive power is likely to be made by the present Government, but it is impossible to say what kind of Government would never resort to such an abuse of its authority. To prevent anything of the kind is the purpose of the Constitution.—(Hear, hear.) If the other view be held, the privileges of this House will be very trivial. We shall always have to be watching the Executive, and living in apprehension that this or that may happen. I do not suppose that any member of this House will interpret the article in such a sense. I should be greatly surprised to find that there is any such member. Without entering into any minute argument to controvert the opposite view, I am entirely persuaded that very few members will be disposed to rely upon the mere phraseology "during the session." At the same time, some may say that the Constitution is not clear; that it contains nothing to forbid the continued detention of a member arrested before the Diet came into session; and that some addition to or amendment of Article 53 should be made. This is practically the same view. The contention that the Constitution ought to be amended and a supplementary law passed, is not unreasonable in its way, but I am persuaded that no necessity for anything of the kind exists in a case like the present. What we have to do in interpreting the Constitution is to consider its spirit before everything. I do not think we shall be wrong if we make the spirit of the charter, and the spirit alone, our guide. It is not written in the 53rd Article that members shall be free from arrest before the session commences, and on this negative evidence an argument in support of such arrest may be based. But it would be an argument opposed to the spirit of the Constitution. That spirit, as I have explained already, is perfectly clear, and I do not imagine that those opposed to my view will be able to found any contention on the mere text of the 53rd Article. It is perhaps unnecessary that any precedents from the annals of foreign countries should be cited before this Imperial Diet, but I may nevertheless be permitted to lay before you one or two pertinent examples. France being a republic, its administrative methods may be very different from those of our country, but this point is distinctly provided for in the 14th Article of the French Constitution of 1875. Again, in the 84th Article of the Prussian Constitution of 1850, it is laid down that a member arrested while the Diet is not in session, must be released if the Diet in session requires his presence. In the Austrian Constitution it is provided that even if a member be undergoing a term of imprisonment, he must be conducted to the Diet on the latter's demand. There are examples are sufficient for my purpose, and I do not doubt that fuller examination would furnish others. The spirit of the Constitution being such, and the precedents contained in foreign annals being as I have described, I am entirely persuaded that the privileges of this Chamber are deeply concerned in the decision we arrive at. Moreover, it is not I alone who entertain this view. I have heard privately

that in the Government itself similar representations have been made. I do not purpose to let the matter pass with this attack. The privileges we possess as members are not of such a trivial character that we can stop here, no do I think that the members assembled in this Chamber are the sort of men to adopt such a course. I take it upon myself to tell you that the question you have to decide is whether a member arrested before the Diet assembles can or cannot be detained in custody after the Diet is in session, without its permission. You have heard read the notice sent by the Minister of State for Justice, and you have learned that the arrest took place under magisterial authority. I do not profess to have any suggestion to offer as to the course that should be pursued with respect to that. I merely point out its practical bearing, namely, that this House is distinctly competent to give or withhold its consent for the continued detention of its members. This is no party question, gentlemen. We are members of the Imperial Diet, and as such we have privileges. Whatever may be the political opinions of the party to which I belong, whatever may be your political opinions, we have to forget parties and politics and remember that this is a matter affecting the privileges of our whole body. I pray you to consider it fully, and to give me your support. If you decide that the arrest cannot be continued, then with regard to the steps which ought subsequently to be taken, my opinion is that the House should convey, through the President, an intimation to the Minister of State for Justice, requiring the release of the member. Probably this will lead to the member's release by the Department of Justice. But without assuming that, the House will have to decide whether it will give or withhold its consent to continued detention. This, of course, is only my own view of the proper procedure. Doubtless the House will have opinions of its own as to this latter point, and I trust that after they are made known, a decision will be come to. I have only to ask you to support my resolution, namely, that although a member may be arrested before the Diet is in session, his detention after the session has commenced violates the privileges of the House.

The PRESIDENT:—Mr. Suyematsu Saburo's motion has supporters, but it has also has opponents.

Mr. HASHIMOTO KIOTARO:—Has it the number of supporters required by the Laws of the House?

The PRESIDENT:—As it is a motion, it can be debated if it has one or more supporters.

Mr. HASHIMOTO:—It must have twenty supporters, I think. Yesterday or the day before, I forget which, Mr. Suyematsu Kencho mentioned (cries of "Order")

Mr. KONISHI JUNNOSUKE:—Judging from the President's statement that Mr. Suyematsu Saburo's motion has supporters and opponents, I am led to doubt whether a matter which had not been duly made a subject of debate has not been included in the orders of the day, and whether Mr. Suyematsu Saburo has not been allowed to ascend the rostrum and speak about it.

The PRESIDENT:—It has already received the support of Mr. Inouye Kakugoro. Mr. Shimizu Sanzo having first signalled to me, I call upon him to speak.

Mr. SHIMIZU SANZO:—I merely wished to say a few words about the orders of the day, much in the same sense as the remarks of Mr. Suyematsu Kencho. I have nothing to offer in opposition to Mr. Suyematsu Saburo's motion.

The PRESIDENT:—I imagined that you intimated your intention of speaking in opposition to Mr. Suyematsu Saburo's motion.

Mr. SHIMIZU:—No, my object had reference to the orders of the day only. I do not oppose Mr. Suyematsu Saburo in that respect, for I have no knowledge of his views.

Mr. OOKA IKUZO:—I do not agree with the views of Mr. Suyematsu, but as they have found no supporters I have kept silence. Since, however, the motion is entered in the orders of the day, I presume that it is a subject of debate, and therefore declare my opposition. But I am not clear about this matter of the orders of the day. Is it necessary that, in order to become a subject of debate, a proposition must have supporters not only when it is entered in the orders, but subsequently also?

The PRESIDENT:—I merely explained that the proposition of Mr. Suyematsu Saburo has the necessary number of supporters to become a subject of debate—supporters originally.

Mr. OOKA:—Then whether it has or has not supporters now, it is a subject of debate, inasmuch as it appears in the orders of the day. Am I right, Mr. President?

The PRESIDENT:—Yes. Mr. Okayama Kane-

kichi has intimated his desire to address the House on the other side. Mr. Okayama.

Mr. OKAYAMA KANZUICHI:—Having received permission to address the House, and having ascended the rostrum for that purpose, I crave your attention, gentlemen, for a few minutes. If I, who ardently support the interpretation given to the Constitution by Mr. Suyematsu Saburo, am nevertheless standing here in the attitude of an opponent, it is because I have good reasons for my action. From the point of view of a proper rendering of the Constitution, not only is the opinion expressed by Mr. Suyematsu perfectly just, but if his reading were not enforced in practice, what would be the result? We are interpreting the Constitution, and the interpretation we give to it will go down to posterity for all ages. For all ages it would stand that a member arrested before the House was in session could be detained in arrest after the House came into session. Were that so, an unprincipled executive might, on the strength of some pretext, cause the arrest of all the members before the session began, and since the Constitution provides no protection, it would be impossible to hold a Parliament at all. To read the spirit of the 53rd Article in that sense, would be to deny any efficacy to the Constitution. Mr. Suyematsu has given a just interpretation, and I deem it incumbent not alone upon us, members of the House of Representatives, but also upon the members of the House of Peers, to maintain that view stoutly, and to establish firmly the privileges of the Diet. I offer no opposition to the correctness of that interpretation. Nevertheless, I hope that you will record your decision against the bringing forward of this motion to-day. I do not, I repeat, question for a moment the correctness of the views advanced by the maker of the motion. It is only in respect of the fact of the motion that I invite your dissent. Mr. Suyematsu endeavoured to raise this question before the House had been duly constituted, and when we were engaged in the business of electing a President and Vice-President. He was restrained from doing so, and he complained that he was improperly restrained. I think, however, that it was quite proper to restrain him in the interval before the Diet was legally constituted. But when the Diet was constituted and he was given the right to speak first, he was obliged by the House to defer the subject, and now two or three days have elapsed since the House was opened for the transaction of business. What are we to say about this interval? If the interpretation given by Mr. Suyematsu to the 53rd Article of the Constitution be accepted, then I think that this House should not have suffered Mori Tokinosuke to remain for three days in the hands of the Judiciary. Even though the question had not been raised, you all, gentlemen, knew about the affair. Yet, so knowing, you took no steps. You made no effort to assert the privileges of the House, and I cannot, under such circumstances, suppose that you interpreted the 53rd Article to mean that a member arrested before the session began might not be detained in arrest after it had begun. A notice was sent to this House by the Minister of State for Justice that Mori Tokinosuke was held in custody. The 53rd Article of the Constitution says "unless with the consent of the House." There are two kinds of consent. There is declared consent and there is tacit consent. For three days you have given tacit consent to the detention.—(Cries of "No, no.") The members who cry "No, no" cannot escape the imputation of having left this vital matter untouched for three days. I do not imagine that we are the kind of people to be guilty of such a singular, such an absurd proceeding. When Mr. Suyematsu first brought this question forward, he had no more ardent supporter than I. But you stopped him, gentlemen, and you therefore stand in the inevitable position of having tacitly consented to the abuse he complained of. Having, then, given your tacit consent already, it seems to me unnecessary that the present motion should be brought forward. If the motion be pressed now, and if it be successful, we, members of the House, cannot escape the disgrace of having lightly suffered this vital question of privilege to remain disregarded for three days. I pray you, gentlemen, to look carefully at this 53rd Article of the Constitution. Mr. Suyematsu has undoubtedly interpreted the spirit of the Constitution correctly, but since this is a question of its practical application, I will read the Article to you:—"The members of both Houses shall, during the session, be free from arrest, unless with the consent of the House, except in cases of flagrant delicts, or of offences connected with a state of internal commotion or with a foreign trouble." You will observe that we have here the words "in case of flagrant delicts." Unless a member is taken, we are told, in *flagrante delicto* he cannot be arrested without the consent of the House. What are we to infer from this phraseology?

The word "to arrest," to "seize" (*torayeru*) does not include the significance of "detention." It refers only to the act of apprehension. The proof is here. If there were any question of detention, then there would have been no occasion to make an exception in respect of flagrant delicts. This, gentlemen, is merely a hasty interpretation derived from the mere wording of the Article. But suppose that the Judiciary does not endorse your view of the spirit of the Constitution, what then? The House must insist upon its decision to the bitter end. If the Judiciary disagrees with your ruling, you will have to go to the House of Peers, and the House of Peers may take the view I have suggested, namely, that as there is mention in the Article of flagrant delicts, the word "arrest" cannot be intended in the sense of detention, but must only be taken to mean the act of seizure. The House of Peers may hold this improper view, and what would then be our next step? We should have to appeal to the Emperor, and if the Privy Council took the same view as the House of Lord we should be utterly discomfited. That we the members of this House, should be discomfited, would not greatly signify, but there would be another result to the controversy, namely, that an unalterable rule would have been established, and that we should have forfeited in perpetuity the privilege for which we contended. We cannot undertake to say that the mistake will not be made of interpreting the 53rd Article according to its exact phraseology. I am a barrister, and have had to deal with questions of this kind in Court. Cases have often come within my experience, where, without referring to the spirit of the law, the meaning of the Chinese ideographs used in translating it has been taken. I do not suppose that anything of the kind would occur in respect of such a grave matter as this, but if it did, we of this House would certainly be inscribed forever in the annals of the Diet as members who took a step that led to the forfeiture of a most important parliamentary privilege. Never to all time could we escape that imputation. It would be most regrettable that members should in future be deprived of this privilege. Having remained silent so long, I think we should be committing an error never to be remedied if we raised this question now. Therefore it is that while I agree with Mr. Suyematsu's interpretation of the spirit of the Constitution, and while I ardently desire to see that interpretation carried into practice, I nevertheless for that very reason ask you to withhold your consent from Mr. Suyematsu's proposition.

The President:—Mr. Nakamura Yaroku.

Mr. SUYEMATSU:—I wish to explain that the word I used was the "consent" (*kyodaku*), not the "permission" (*kyoka*), of the House. Some of the members seem to have understood the latter.

(Here some question was raised with respect to the order in which applications had been made for permission to speak, but the President ruled in favour of Mr. Nakamura Yaroku.)

Mr. NAKAMURA YAROKU ascended the rostrum, but Mr. Inouye Kakugoro, rising in his place, said that he had already given notice of his desire to speak in support of the motion, and, his claim being admitted by the President, he took Mr. Nakamura's place.

Mr. INOUE KAKUGORO—I support Mr. Suyematsu Saburo's motion. My chief reasons for taking this view being the same as those that Mr. Suyematsu has already submitted to you, there is no necessity for me to repeat them. I beg you therefore to take the repetition for granted. The privilege of a member is the privilege of the Diet. The privilege vested in the whole body is the sum of the privileges enjoyed by its units. The members are the representatives of the nation, and upon them devolves the function of consenting to the exercise of the legislative power. If even one of them is deprived of his privileges, the whole Diet is wounded through him. If there is nothing in the Constitution to warrant the detention of Mori Tokinosuke, you will all agree that not a day should be lost in setting him free. If, on the other hand, there is warrant for his detention, then this House desires that its permission for holding him in confinement should be obtained. Mr. Okayama has just told us that, in regard to the rendering of the Constitution, he is at one with Mr. Suyematsu. He agrees that the detention of members without due Constitutional warrant would interfere with the exercise of this House's legislative power. Yet he thinks that as the House has given its tacit assent to the proceeding, there is no help now. This is a mere pretext. The House cannot be said to have given its tacit assent. On the 25th of November, when the Diet first met, I, Inouye Kakugoro, rose and formulated a question about Mori Tokinosuke, but I was ruled out of

order by the Acting-President. Yet again I attempted to bring the matter forward, but again I was prevented on the ground that the Rules of Procedure had not yet been passed. When the Rules were passed, what ensued? Mr. Suyematsu Saburo's motion ensued. Not for a single day did we forget this matter. We never gave our tacit assent. To be told that we did so when we have never done so can only be called a pretext. Mr. Okayama has been a barrister for some time, and has often conducted cases in Court. He has won victories, no doubt, and he has also met with defeats. Frequently when he has lost a suit, he has appealed, and possibly the appeal has not been allowed. It is absurd, he says, to go into a fight when defeat is inevitable. If one keeps out of the fight, one can at least claim not to have been beaten. If one goes into it and is beaten, there is no resource. I confess myself unable to comprehend such talk as that. His words have been entered in the records of the House. He is down as having said that we had better not fight lest we be defeated. Do you think that the reputation of this House can be established for all time by following such a doctrine? Whether victory or defeat be in store for us we have the honour of this House to guard. We shall carry our claim to the Minister of Justice; we shall carry it to the Government; and if we fail with them, we will go on to the Emperor himself. In such circumstances as these we have to remember that we are the representatives of thirty-nine millions of people. To imagine that the honour of this House will be vindicated by suffering it to be entered in the records for all time that we deemed it better to keep silence lest we might suffer defeat, is a notion which I do not believe that any one of the three hundred members of this House approves except Mr. Okayama himself.

Mr. OOKA IKUZO—I am entirely opposed to Mr. Suyematsu Saburo's motion, and in agreement with Mr. Okayama. But I am not going to raise any paltry issue as to whether I endorse or do not endorse Mr. Suyematsu's views. What I have to say to you is that I am a subject of this empire. I am not a foreigner. I cannot consent to have the laws of foreign countries cited as means of determining the laws of Japan. If precedents are to be taken from foreign countries and applied to strengthen the powers given to the Diet by the Japanese Constitution, why should we stop half way in the process? We may carry it farther even than Mr. Suyematsu does. I will show you how. The 53rd Article of our Constitution says that except in cases of flagrant delicts, or of offences connected with a state of internal commotion or with a foreign trouble, a member must not be arrested during the session. But in the French Constitution no exception is made in respect of such offences. No offence, light or serious, can make a member liable to arrest during the session without the consent of the Chamber. If we are to adopt Mr. Suyematsu's idea; if we are to say so and so is the case in France, such and such is the fashion in Austria, and if we are to apply these precedents in Japan, why not go a step farther—

Mr. SUYEMATSU (loudly)—I never spoke of "applying"—(cries of "Silence" and "No one but the President has a right to interrupt the speaker.")

Mr. OOKA—I stand here by permission of the President, and I have a right to express my opinions fully. Laws are not to be interpreted by such methods, and we have no business to apply to our own laws precedents drawn from foreign countries. I am persuaded that you will agree with me in this. Mr. Suyematsu put various arguments before you, and so did Mr. Inouye. I shall refer to the principal of them only. You have been told that in Count Ito's Commentary the expression "not to be arrested during the session" is employed, and on the strength of that, or of some other statement of members of the House of Peers, an interpretation has been offered to you. But if you go to the root of the matter it is this. A thousand years, hence—a long time, that, gentlemen—a thousand years hence we may have a very wicked Executive, and it may happen that five or six days before the meeting of the House, twenty or thirty of its most powerful members, opponents of the Government, will be arrested and detained on some criminal charge, so that the independence of the Diet will be an impossibility. That, gentlemen, I think, is the principal point that has been hammered into your heads by the supporters of this motion. Gentlemen, the proposer of the resolution did not tell you so himself, but I suspect that he is the victim of a foreign bugbear. In France, Napoleon did so and so; somewhere else, such another affair occurred. By these events he is governed. You are all well acquainted, with the 53rd Article of the Constitution, but I would ask you to look at it once more. This very day, if the Government believed that any of you who are sitting here had committed an offence connected with internal commotion, and if the

Courts could obtain a single proof of it, you might be arrested at once and you would be helpless to resist. The Imperial Diet would be helpless to resist. Do you imagine that, such being the case, the Government is likely to provoke the censure of the House by such a paltry procedure as an illegal arrest? (cries of "Government supporter"). You can be arrested at any time on a charge of having committed an offence connected with a state of internal commotion or with a foreign trouble. If arrest is to be used as a political weapon, the Government need not be embarrassed for lack of opportunity. All that need be done is to put the offence in one of these categories, internal commotion or foreign trouble, and arrest becomes clearly legal according to the words of the Constitution. And now suppose that the state of affairs apprehended by Mr. Suyematsu and Mr. Inouye became a practical reality. Suppose that an evil man controlled the Executive, and that the Judiciary worked with him. What would such a time mean? Think, gentlemen. Would it not be a time like that which overtook France more than once when the Government—pardon, I should say when the State—suffered serious reverses; a time of national cataclysm? Surely it cannot but be called at least unseasonable that at this moment of profound peace, at this moment of the Diet's inauguration, we should look forward to such a time of cataclysm, such a time of war, such a time of national disaster. If you propose to busy yourself about expedients for checking abuses of the Executive power, the nature of the task will be plain to you when you remember that you are helpless to prevent the arrest of one of your members in case of an offence connected with a state of internal disturbance or foreign trouble. Here let me call your attention to another point. I think that the meaning of the Constitution—doubtless the mover of the resolution will regard my opinion as that of a very crude jurist—its meaning I think is that except in the case of offences connected with internal or foreign trouble, the power of the Judiciary cannot be employed to arrest a member unless he is taken *flagrantis delictu*. In respect of the propriety of arrest while the House is not in session, Mr. Suyematsu and every one else are quite agreed that the power of the Judiciary may be set in motion. Now the Judiciary has been acting in this matter—I speak of actual facts—since the beginning of July. During all that time the Judiciary has been pursuing a proper procedure, and in the course of that procedure the trial of the accused was going on yesterday and is going on to day. The proposer of this resolution seems to think that the notice given to the House by the Minister of State for Justice indicates that the Department of Justice is perplexed how to proceed. Nothing of the sort. The regular routine of legal procedure is being duly adhered to. If it comes to a question of the spirit of the law, if it is simply the interpretation according to the spirit, then I too am of your opinion. But when Mr. Suyematsu tells us that the object of the Article is simply to guarantee us against being subjected to an arbitrary and vicious Executive, I cannot for a moment agree with him. Once more, gentlemen, I beg you to consider the matter. A flagrant offender is excepted from the privilege. By the French Constitution even a flagrant offender may be arrested. What is meant by "may be arrested"? Not that the man must be seized at the very moment of committing the crime. The law makes it quite plain that he may be pursued and arrested even the next day. What then is the import of flagrant offence? It means an offence concerning the actual commission of which there is certain proof, and no doubt whatever. In case of such an offence the arrest of a member is allowed. Reason back from this meaning and you will see that if a person has been arrested before the opening of the Diet's session, and if proofs have been accumulated against him until his guilt is established, he is undoubtedly in the position of a flagrant offender who may be held in arrest without any parliamentary permission even after the Diet is in session. Another point. In interpreting the Constitution, we are of course bound to make the independence of the Diet our aim; bound to maintain its prestige. But we are also bound to take care that we do not interfere with the independence of the Judiciary. Gentlemen, the supporters of this resolution, the men who have suggested doubts as to what will happen if arbitrary and evil Ministers chanced to be in power, stand virtually in the position of having asserted that the Japanese Judiciary is not independent; have beyond question distinctly announced that Japanese Judges do not possess independence. If the Judicial officers have a proper sense of their independence, if they refuse to obey the direction of the Executive, then we shall be secure from arrest however arbitrary and wicked may be the Ministers of State. The arrest of offenders is the act of

the Judiciary, which is not controlled by the power of the Executive. Such being the case, I would bespeak your attention to an important point.—("Understood," "understood.") If you pass this resolution the result will be that you charge the Judicial Authorities of Japan with having acted in ignorance of the law, and fiction will immediately ensue between this House and the Judiciary. That is the second point about which I am uneasy. For that reason I shall to the end oppose the proposition now before the House. I am at one with Mr. Okayama in regarding it as a useless proposition.

Mr. AYAI TAKEO—I am one of those who agree with the maker of the motion, Mr. Suyematsu Saburo. It may seem that I reiterate what Mr. Suyematsu has already explained to you, but Mr. Okayama Kanekichi and Mr. Ooka Ikuyo have stood here, the former telling you that he agreed with our views theoretically, the latter that he was opposed to them throughout, and I confess myself unable to understand the reasons of his opposition. It is not enough merely to declare oneself opposed to a measure. The reasons of one's opposition must be stated, and I therefore propose to tell you why I support the motion now before the House. You have it in the Constitution that except in case of offences connected with a state of internal commotion or foreign trouble, members cannot be arrested without the consent of the House. Mr. Suyematsu has told you that an arrest cannot be made without parliamentary permission, and Mr. Okayama has admitted that he too takes the same view. Nevertheless, a member has been arrested and held in confinement until this day. A short time ago we received an intimation from the Minister of State for Justice that such is the case—an intimation merely that the state of arrest continues without any question of the Diet's consent. Such an intimation is in itself a conclusive proof that the Constitution has been violated. It is absolutely established that the arrest having taken place, we must have the Constitution vindicated by the production of the member before this House. I imagine that Mr. Okayama also will be of the same opinion. If that be the case—"settled," "settled," "leave that alone"—it is incomprehensible that the Judiciary should persist in maintaining the state of arrest. It is for us to oppose this mistake of the Judiciary's. There is no question that our member, having been arrested without our permission, must be produced to the House. There being no question about that, the notice sent to us is indefensible, and we have thus a distinct violation of the Constitution in actual fact. If the member is to be held in detention, our permission must be sought. Either our permission must be obtained, or we must take the necessary steps to assert ourselves. That is absolutely settled, and for that reason I support the motion.

Mr. OYAI BUCHIRO—I am entirely opposed to the resolution. A short time ago, when a member opposing the resolution was addressing the House, I heard cries of "Government supporter," and others have attacked the Opposition on the ground that they cannot understand its arguments or reasons. But I understood them perfectly, and if you, gentlemen, cannot understand them, you must be decidedly slow of comprehension from my point of view. The mover of the resolution told you that if we chanced to have a wicked Government which arrested a number of the members, the independence of the House could not be preserved; that, therefore, such arrest must not be permitted to continue during the session, and that the spirit of the Constitution justifies us in requiring the release of our member. That is a very proper view on his part. I too should be most pleased to have that course followed if the 53rd Article of the Constitution lent itself to such an interpretation. As a member of the Imperial Diet, when you come to speak of maintaining the independence of the Diet, I am entirely at one with you. But when you come to twist the law merely because you wish to have it interpreted in a certain manner, I part company with you. I would have you distinguish clearly between what you wish yourselves and what the law signifies. The 53rd Article of the Constitution says that during the session a member shall be free from arrest. Do you hold that the word "arrest" includes the larger meaning of "detention," or do you consider that it refers merely to the act of seizure? You must go to other laws for an interpretation of the word if you want to arrive at the truth. How is this word arrest (*teido=oi tora-yeru*=to follow and seize) used in other laws? If the word is employed anywhere, either in the Criminal Code or in the Code of Criminal Procedure, in the broad sense of to seize and detain, then we cannot attach to it that significance here. But the words to seize and to detain are distinguished in their employment. It does not follow that if a man is arrested he is also kept in detention. That would be to deprive him of his freedom. "Arrest"

and "detention" are used separately. We are compelled, therefore, to conclude that the Constitution cannot be interpreted to mean that a member must not be kept in detention during the session. Another point. In one of the Laws of the Houses—seventy-something, I forget the exact number—it is provided that when a member has lost any of the qualifications of eligibility, he shall be considered as retired. Now these qualifications, by the loss of which a member is considered to become retired, are enumerated in another section of the laws. The third chapter of the Law of Election gives the qualifications of eligible persons, the fourth chapter gives the rules applicable in common to electors and eligible persons. You will find it there stated that any person against whom a criminal prosecution has been brought, and who is in detention or under bail, shall be incapable of exercising the right to elect or be elected until the completion of the proceedings. Coupled, thus, with the seventy-something Article of which I have just spoken, it is plain that such persons are in the position of retired members. It follows then, from a comparison of these provisions, that the Constitution does not forbid the arrest or detention of a member out of session. The Law of the Houses gives you a distinct clue to the interpretation of the spirit of the Constitution. According to the laws of Japan, though a man is an elected member of the Diet, he may be arrested and held in detention while the Diet is not in session. Having been so arrested and held in detention, he loses the qualifications of an elector and becomes a retired member. Therefore Mori Tokinosuke has lost the qualifications of an elector, and become a retired member. That is the law of Japan.—("No, no.") You surely ought to be able to understand this. It is a very great mistake to claim that because you wish the law to read in such and such a fashion, therefore you can twist it to bear that interpretation. Compare the provisions of the Constitution with those of the laws accompanying it, and you will see at once that the interpretation attached to the former by the mover of this resolution is inadmissible. Yet another point I wish to put before you. It relates to the proofs adduced by the mover from foreign laws. He argued that because in such and such a country it is provided that a member arrested and held in detention while Parliament is not sitting, must, if the House when in session so desires it, be produced by the Judiciary, and because, in such another country, he must be released, therefore the spirit of the Japanese Constitution also must be interpreted to mean that the detention of a member during session is illegal. But the production of such proofs tells in a sense precisely opposite to that intended by the maker of the motion. For since it is clearly laid down in the Constitutions of foreign countries that a member arrested and held in detention before the session must be released when the session commences, then it follows that the contention of the mover is not established by the Japanese Constitution where no distinct provision of the kind is made. I should very much like to interpret the spirit of the Constitution in the sense of the proposer of the resolution, but I am unable to do so in the face of the Japanese Constitution and its appended laws.

Mr. SUTSUIRO SHIGERU—I am a supporter of the member who made this motion. Mr. Suyematsu Saburo exhausted the subject so completely that it is unnecessary for me to go into any further details, but there have been singular arguments advanced by the Opposition and the replies made to them seem to me to leave something to be desired. I propose therefore to collect these points briefly and submit them to you. Mr. Okayama's contention was the most difficult to comprehend. He approved and he didn't approve. It was a flitting kind of speech. "I want to oppose," he seemed to say, "but if I openly oppose I shall be said to belong to the Government's party or to be of the Government's policy, and that would be disagreeable." The best that can be said of his speech is that it was the speech of a politician, but candid criticism will pronounce it just a little too adroit. He told us that he agreed with our interpretation of the spirit of the Constitution, but—since the House had taken no action in the matter until now, might not its reputation for regularity be impaired by taking the thing up now? But this is not the fact. There has been no time to discuss this question since the Diet was constituted. It was impossible to put its discussion in train. And then he went on to a particularly strange argument. If the Judiciary, he said, happened to put an extravagant construction on the spirit of the Constitution, we should be in a difficulty. What is an extravagant construction? A construction that does not accord with reason is above all extravagant. Nothing could be more permanently opposed to the Diet's purpose than the principle that it must give way before injustice. Mr. Okayama's experience in the Law Courts may have

left on his mind the impression that his own views of what is correct must yield to the unreasonable of the Judicial Authorities, but he is greatly mistaken if he expects to find any such mood in this House. It is not convenient to raise this question now! Better keep silence and not wash our dirty linen in public! If we keep silence, how can we arrive at any interpretation? Our member has already been arrested and is in prison. Our member is in prison, and we are told that the Diet may go on taking no notice of the fact. To say to the Diet that after it has assembled in its chamber and commenced its deliberations, it is to keep silence when a wrong interpretation is put on the Constitution, is tantamount to telling it plainly that its members may be arrested without its consent even after its session has commenced. The Diet, in fact, is to destroy its own privileges. You must see that Mr. Okayama's contention will not stand for a moment; that it is utterly opposed to reason. Then came Mr. Ooka, who persisted in discussing the 53rd Article. He did nothing else. His argument was simply that the 53rd Article is the 53rd Article. He did nothing but ask you in a general way whether the text of the 53rd Article was not clearly so and so. Men are gifted with the faculty of judgment. They are gifted also with the faculties of supposition and conjecture. If the meaning of the Constitution is not plain, we have recourse to foreign precedents, and to the principles of right to aid our comprehension. To assert that the words and the words only are to be our sole guide in interpreting it, is an astonishing doctrine. Accordingly, the mover of the resolution adduced cases from foreign systems, and said that these must be taken as proofs. Whereupon he is told that his brain is under the influence of foreign ideas. And while condemning recourse to foreign precedents, Mr. Ooka himself resorted to them several times subsequently. Surely that is a little too much. He is of opinion that it is not necessary for this House to guard the privileges of its members, as we claim that it is. Why so? Because, flagrant delicts and offences connected with a state of internal commotion or foreign trouble being excepted, members may be arrested for any of those crimes and the Diet has no means of protecting them. We have the clear text of the Constitution. With that text we cannot interfere. But it is at all events our duty to take every possible measure for guarding the privileges of members who are not offenders under the category of flagrant delicts, internal commotion or foreign trouble. To say that because we are deprived of seven-tenths of our privileges, therefore we must politely return the remaining three-tenths as useless, is the contention of men who attach very little value to their privileges. Mr. Ooka told us also that while we seek to maintain our own power, we must also maintain that of the Judiciary, and assured us with much insistence that as the Judicial authorities are such correct people, we must hold our tongues and let the matter alone; must let them seize our members just as they please. What is the original object of framing the Constitution? Not to day in the present Diet, doubtless, but in the course of one or two hundred years, some question may crop up and members may be arrested, and surely it is to guard against such a calamity that the 53rd Article has been inserted? Aye, in truth, if the judicial posts are to be filled for all time with upright, honourable men, this Article must be pronounced unnecessary. In such a perfect state of society Constitutions and laws might all be pronounced useless. Then came Mr. Oyagi, who shared Mr. Ooka's views. He told us that if an evil Government arose the Diet could not be maintained, and that consequently our interpretation was conceivable, but that we must not interpret laws according to our own fancy merely because we wished to have them so. I venture to think that even the supporters of this resolution would not perversely put an impossible interpretation upon the Constitution for the sake either of an evil Government or for the sake of its oppression. Mr. Oyagi asked you what "arrest" means. He told you that it means to be seized, and that it is different from being detained in arrest; that to be detained is to be imprisoned. He told you, in effect, that a member may not be arrested but that he may be kept in a state of confinement. For my own part, I fail to see how you can put a man into confinement unless you first arrest him. Mr. Oyagi's argument is as though one should forbid a man to come inside the gate of one's compound, but permit him to enter the hall of one's house. At the end of his speech he told you that a person in confinement loses his qualifications as an elector, and that consequently Mori Tokinosuke has lost his qualifications to be a member of this House. Surely this is not the kind of argument that might be expected from a barrister of reputation. If a

man is arrested before his election, he undoubtedly loses the qualifications of a member, but in what law, of what month, is it laid down that after a man has been elected he loses the qualifications of a member by being arrested? We must go to Mr. Oyagi, I think, to find such a law. There is not one just point in the arguments of the Opposition. The whole of their contention fails, I think, to affect our position. Therefore I will support the mover of the proposition throughout, and I only regret that when he commenced his argument a clearer statement of the final issue was not made. Should the Minister of State for Justice, as has been stated, approach you through the President with reference to the fact that Mori Tokinosuke has been arrested and is in confinement, there may be a doubt as to whether you will consent to the arrest or not. I think, then, that if you decide on the necessity of recognising the arrest, and if an answer that the House consents were returned without further debate, we should avoid discussion and at the same time the privilege of the House would be completely established. If the House is approached, and if its consent is advisable, then I think that an answer in that sense should be given. But when the main question is settled, the various steps to be subsequently taken can be fully considered. I trust that the House will endorse our view of the case, and appoint a special Committee to manage the details.

Mr. KUDO KOKAN—In accordance with the 116th Article of the Rules of Procedure, I move that this debate do cease here, and that the House proceed to vote.—(Applause.)

Mr. AIKAWA KIUTARO—I beg to offer a very few remarks—

Mr. UKKII YEMORI—The question of closing the debate is before the House and must be decided first.

Mr. KUDO KOKAN—My motion, made under the 116th Rule, has found supporters, and I claim that it be decided first. Subsequent debate is another matter, but I beg that my proposition be decided.

The PRESIDENT—Mr. Kudo Kokan has moved that the debate be now closed, and his motion finds supporters. All who are in favour of the closure of the debate will stand.

The majority rose.

Mr. IYENAGA YOSHIKO—I wish to ask a question, Mr. President. In Mr. Suyemitsu's speech he spoke of a special committee. What of that point?

The PRESIDENT—That is a matter for subsequent consideration.

Mr. IYENAGA TESHIMORI—If supporters are required, I beg to support it.

The PRESIDENT—Mr. Suyemitsu Saburo, I wish to ask you something. I understand that I am to make an application to the Minister of State for Justice for the release of Mori Tokinosuke. If you have prepared any written form, I will examine it and inform the House.

Mr. SUYEMATSU—I should like to have copies distributed among the members before the division.

The PRESIDENT—Before asking for the House's decision, I will repeat the proposition once more:—"A member of the House of Representatives arrested before the session of the Diet, and remaining in arrest after the Diet assembles, cannot be detained without the consent of the House." This is Mr. Suyemitsu Saburo's motion. All who are in favour of it will stand.

A majority rose.

The PRESIDENT—The motion is carried. The next point is the proposal that a Special Committee be appointed. Those who are in favour of this will please stand.

A majority rose, and the President declared the proposal carried.

CORRESPONDENCE.

THE EMPEROR AND FOREIGNERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It may not be out of place, under present circumstances, to make public the fact that his Majesty the Emperor, while on his way to the Parliament House on Saturday last, graciously responded to salutations made to him by two foreign gentlemen, unknown to him, who were standing, almost unaccompanied, at the way side. The act has its significance in relation to the great political change which has just been begun by the inauguration of a popular parliament. It indicates as well the thorough courtesy and kindness which characterize Japan's Sovereign.

Very truly yours,
Tokyo, December 4th, 1890.

THE RUSSIAN LEGATION AND THE TOKYO STUDENTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On the principle of better late than never, and to correct some slight mistakes in the account of the stoning of the ladies at the Russian Legation on Saturday last, I send you the following as the account of an eye witness. So far I know, a friend and myself were the only foreigners who saw the beginning of this unpleasant episode. We had watched the Imperial procession as it left the Palace from a spot just in front, and then we slowly followed in its wake to the Sakurada Gate. Here we were caught in a tide of humanity that swelled up against the outer gates, which had been closed by the police. They were shortly after opened to admit the passage of a regiment returning towards the Palace. After it had passed and before the gates could be closed, we were able to pass out with the first wave of the crowd (I do not know that the gates were closed the second time, but the attempt was being made when we passed). We then walked leisurely towards the Russian Legation. As we neared it, the denser crowd made progress slow. Many were returning, others like ourselves, who had come from the Palace grounds, were pressing to the front only to find the street leading to the Diet closed by a double line of police and gendarmes. In front of them were single police arguing with persons who under one pretext or another were trying to pass the line. Among these were some students who were more or less noisy. We two went a little up the hill to see if there was any possible chance to pass nearer the Legation wall, and stood a moment or two watching the line of police just below us in their efforts to keep the street barred. All this occurred before the stoning, and took some time. The Emperor must have entered the Diet some minutes before. For this reason, I cannot believe that the stoning was directly due to anger at the elevated position in which the ladies were sitting! There may be comments on this expressed before we came, and the anger may have taken all this time to rise to the stoning point, but this hardly seems probable when joined to what follows. This reason doubtless occurred to many after the affair began, but as far as I could judge, those who did the stoning at first had but a minute or two before come from farther down the street and did not know whether the ladies were there or not when the Emperor passed.

As we stood watching the struggle with the police, a little puff of something like smoke in front, followed by a slight noise, made those around us jump, and then there was a laugh at the wag who had exploded a fire cracker when every one had "dynamite" on their minds. One of the ladies in the pavilion started, and the others laughed. Whether they saw what we did, or whether the start was connected with the puff of smoke, I do not know, but the laugh, as far as I could see, first called the attention of the crowd to these ladies. Not two minutes after, a single pebble was thrown at them; then another, then two or three. The stones did not come in a volley at first but the throwing rapidly spread. For the first minute or two, the party in the Legation did not seem to, (nor did we) realize that they were being stoned. As the throwing became more general, more than half the stones fell short of the mark and on the police who were below the wall, and below the level of the throwers, and who consequently did not notice the first volley, and might well have suspected that they were the object of the attack. The stone throwing was all in front of where we stood, and the Legation servants were on the walls some distance in our rear, so it is simply impossible that the crowd intended their missiles for them, as suggested by your Japanese correspondent. As the throwing became more general, and the reality of the situation came to me, I saw a gentleman I knew (who was in the pavilion), as I thought beckoning to me. I interpreted it to mean that I was to try to stop the throwing, which I had rapidly made up my mind could be quickly done if I could secure the attention of the police, who from their position had not yet, it seemed, been able to discover what was going on. I rushed forward as a large stone sailed up, saw it just miss one of the ladies, and looking quickly down saw the thrower picking up another. I broke through and grabbed the wrist of the thrower, only to find that it was a little dirty *kono* of about 8 or 10, so small, that I could not help smiling as I gave his arm a gentle twist with a fierce *do shita*? I turned to grab something larger but the crowd was dense, and the throwers were scattered through it. Just at this time, a large tile sailed by my head, and looking up I saw that the servants of the Legation were shelling the crowd where I stood, evidently as tit for tat. Then for the

first time, the throwers turned and began firing at the servants, who replied in a shower of tiles. The ladies had left the pavilion and my friend and myself found our position shelled by our friends so to speak, so we concluded (those tiles were "abunai") to make a retreat forwards, and with about a dozen or more Japanese we went helter skelter through the line of police around towards the front of the Legation, willing enough to leave the matter where it properly belonged. We saw nothing further except the police at the gate of the Legation, trying to get near enough to persuade those within to cease firing, while others were "running in" throwers whom they caught in the act.

Had the Legation servants restrained themselves but a few minutes, I am sure the whole thing would have been stopped by the police, and a large number of arrests made. As it was, the Legation folks made such a fight and widened the area of conflict so much, that it was only at the risk of a broken head, one could see who in the crowd was throwing.

And now as this has been made so much of, speaking with as full a knowledge as possible of such an affair, it seems to me that the explanation is not far to seek. Some one, it may have been the little scamp I saw, for he was handy with a stone, out of wanton mischief threw a pebble at the ladies. Another took it up and the *sashi* in the crowd, ever ready for such things, joined in. Having witnessed one or two stonings in Japan and one in a "civilized" land, under almost similar circumstances, I do not see that this affair was a whit different. Among a large crowd, some rascal, generally a small one, begins it, and in such a crowd in any country there are always enough of a rabble to keep it up. There is only this difference, that once commenced here, other motives than pure mischief may add to the disturbance, and also that bystanders in Japan are passive: they as a rule never interfere but leave it all to the police.

Hoping that this lengthy account may throw light on the affair.

I am, very respectfully yours,

HATA NO HITO.

December 6th, 1890.

THE CHRISTIAN CHURCH OF AMERICA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Perhaps I ought to ask your pardon for asking space in your valued paper, because the Church with which I am labouring is so small and its name so little known among the people of Japan, but as you have so kindly given your columns to the various missionaries, I hope I may not be considered an intruder in presenting a few thoughts concerning our own work. The Christian Church of America sent its first Missionary to Japan in 1837, and another in 1889, and because of the disadvantages of obtaining residence outside of Treaty limits the work has not been very extensive, but something has been done and we hope to do more in the future.

At the recent Quadrennial Session of the American Christian Convention, held in October, 1890, at Marion, Indiana, the following circular was presented, adopted, and ordered to be published. I would esteem it a great favour if it can have a place in your columns for the information of the workers in Japan, and also for the purpose of seeking a closer union with all Christians.

Yours faithfully,

H. J. RHODES.

Tokyo, December 4th, 1890.

It is becoming more and more apparent that Christ established but one Church, designing that all his followers, as members of that one body, should harmoniously work together for the salvation of the world. We are of the opinion that the present division of the Church into sects and the attitude of these sects toward each other is wrong, and impedes the reformation of the world.

II.—It is our belief that entire unanimity of opinion upon matters of theological doctrine and ecclesiastical polity is unattainable so long as "we see through a glass darkly," but that a unity of love, forbearance and co-operation is fully within the reach of all true Christians.

III.—There is a widespread and increasing desire among God's people to come into a closer relationship with one another, manifested in various ways. Churches are springing into existence in various localities, composed of Christians who are tired of sectarian intolerance, and desire to manifest their essential unity; and that "doubtful dispensations" are sinking into disuse, while the great points of faith common to all Christians are rising into due prominence.

IV.—As an organization, it is and has always been the chief object of the Christian Church to labour for the conversion of the world, to bring together all true Christians upon a platform of mutual forbearance, common sympathies, and fraternal love. We, therefore offer the hand of fraternal greeting to all true followers of our blessed Redeemer, assuring them of our profound interest in their welfare, and soliciting their kindly sympathies and prayers. Holding these views and aims, we hereby declare our desire to cooperate with any and all those who love our

Lord Jesus Christ, in performing the great work which he has assigned his church. The Christians formed an organization merely to make their labours more effective, and they are ever ready for union with any body of Christians upon the basis of those great truths which underlie the religion of Christ, belonging only to those fundamental truths, without which Christianity could not exist, the Christians are ready to submit all minor matters to the decision of the individual conscience. We suggest the following as a basis of union:—

- (1) Belief—(1) In God, as our Creator and lawgiver.
- (2) In Christ, the son of God and Head of the church, as our divine Mediator and Redeemer.
- (3) In the Holy Spirit as our Comforter and Sanctifier.
- (4) In the Bible as inspired by God and the supreme standard of appeal in all matters of religion.
- (5) That love to God and men is the whole duty of man.
- (6) With a view of forming and cultivating fraternal relationship with all Christians who are tired of sectarianism, we invite correspondence.
- (7) In putting forth this circular address and manifesto we but repeat in part the language and sentiments expressed by the members of the Christian denomination.
- (8) May the God of all grace direct his people into a closer and more perfect unity, that the Saviour may be glorified and the world regenerated.

THE ASIATIC SOCIETY OF JAPAN.

A general meeting of the Asiatic Society of Japan was held in the Society's Rooms, No. 17, Tsukiji, Tokyo, on Wednesday, December 10th, 1890, at 4 p.m., N. J. Haanen, Esq., President, in the Chair.

The Minutes of last meeting having been published in the *Japan Mail* were taken as read.

The PRESIDENT, in opening the meeting, remarked that it was probably beyond the memory of a good many present that the late Dr. Syle had for many years been an officer in the Society. Those who had known him, however, knew with what devotion he served the Society in its earlier days in Japan, and what a constant interest he took in its proceedings after he had left Japan. Quite lately he had offered his services to act as the Society's deputy in important gatherings in England. He was the Society's first Secretary, and subsequently filled the offices of Vice-President and President. In 1877 he read a paper before the Society "On Primitive Music; especially that of Japan" (see Vol. V. of Society's Transactions). He died in London, October 4th, 1890, a very few weeks after the death of his wife. It must be with sincere regret that the Society chronicles the death of one of its founders.

The PRESIDENT then called on Professor Wigmore to read the joint paper by himself and the late Dr. Simmons entitled "Notes on Land Tenure and Local Institutions in Old Japan."

The Paper was a very lengthy one, and the author confined himself to reading several extracts bearing more especially upon the organisation of village communities.

The Paper was based on the posthumous papers of the late Dr. Simmons. Its character the subjects touched on, and the conclusions arrived at, may be gathered from the following abstract of Professor Wigmore's summary:—

The problem of the source of the primitive Japanese people has been examined from many points of view,—from the archaeological by von Siebold, to name one name only; from the zoological, by Blakiston; from the geological, by Milne; from the mythical and traditional, by Chamberlain; from the philological, by Parker; from the anthropological, by Baelz. But from what may be called the institutional standpoint, it still remains to be considered. Yet this aspect must ever be an important one. Take the single set of facts upon which Dr. Simmons is the first to lay proper emphasis,—the facts relating to early serfdom. The existence of serfdom among primitive peoples points almost always to a greater or less difference between the stock of conquerors and conquered. Given, as in this case, the fact that there was a conquering of Japan by certain primitive immigrants, and we know that there must have been some difference of stock between the invaders and the opposing inhabitants. Further investigation of the nature of the serfdom which ensued would help to decide whether the subjected classes were strictly aborigines, or were merely descendants of earlier immigrants from the home of the invaders. A study of the later development of the serfdom would make it clear whether the common people of to-day are to be identified with the primitive serfs. Furthermore the history of European tenure may be of assistance. In the case of some of the early Germanic tribes, for instance, we find them with families and slaves, settling in new territory, and out of their own numbers populating districts and developing into communities. In the case of the Saxon and the Norman conquests of England, on the other hand, we find bodies of warriors descending on an insular population, preserving the existing com-

munities, but bringing them into subjection. It is obvious that the relative number of the serfs and the servile mode of life would differ in the two cases. These instances and others furnish several different types of early communities, in which the history of the conquest and settlement are more or less intertwined with the nature of the serfdom. Given the facts bearing on the kind of serfdom and we may be able to reconstruct the course of previous history. In the case of Japan, for example, the number of serfs makes it necessary to suppose that the conquest of the country resembled that of England by the Angles and the Saxons. At the same time, we may find, in the history of a given people, that it has at various times partaken of various types. One of the interesting features, in the present instance, is that we find traces in Japan at one time of a development like that of England, at another of a practice of colonization such as characterized the early Germanic tribes, at another of a system resembling the Roman provincial administration. The possibility of reasoning from a tooth or a vertebra to an entire skeleton is not peculiar to zoology alone; and the proper investigation and comparison of the facts bearing on early serfdom in this country would yield rich results to the ethnologist.

An illustration of the way in which the facts of primitive institutions must be used to verify inferences resting on other grounds is furnished by the consideration of a conclusion reached by Dr. Baelz ("Körperlichen Eigenschaften der Japanischer," *Mittheil. der D. Ges. Ost. Hft. 28, s. 330*). These are, briefly, that three ethnical elements are represented among the Japanese people: 1. The Ainos, the original inhabitants of Middle and Northern Japan, but very sparsely represented in the people of to-day; 2. A Mongoloid tribe, resembling the better classes of Chinese and Koreans, immigrating from the continent across Korea, first settling in the south-western part of the main island, and thence spreading over it; this class possesses a slender figure, narrow face, dolichocephalic skull, a fine curved nose, and a small mouth; 3. Another Mongoloid tribe, bearing a distinct resemblance to Malays, first settling in the southern island of Kyūshū, then crossing to the main island and conquering it; this class has a stout frame, short skull, broad face, flat nose, and large mouth, and is preponderant among the common people; it is most purely represented today in Satsuma; and includes also the Imperial family.

These opinions involve the conclusion that substantially the entire present people of Japan are descended from the immigrant invaders. Yet, once it is established that the common people of to-day represent the serfs of the first five centuries of this era, and that the serfs of that day must have been a conquered aboriginal people, an hiatus occurs in the analysis; for the race of the common people is not accounted for. His identification of the Satsuma type as that of the Imperial family and of the Izumo dynasty is doubtless sound; but the reference to Satsuma only serves to show the necessity of some modification; for it was precisely in Satsuma that the emphasis of class-difference was greatest, that serfdom continued longest, and was most pronounced, and the tracing of the type of the ruling classes in Satsuma leaves the lower classes still unaccounted for. Moreover, the early difference of status being so great between the upper and the lower classes, is it likely that the type of men who became the conquerors of the main island and to-day are found in the Imperial family would also occur most largely among the masses,—in other words, would become at the same time conquerors and serfs? On the other hand, anthropological data, when interpreted according to the facts of early institutions, may be found to tell a different story. Two immigrations by two stocks of invaders are clearly indicated; the conquering of the northern settlement by the southern certainly followed; but perhaps both had originally been conquerors of a native people; and though the two immigrant tribes probably made some kind of a compromise or division of authority, it seems likely that neither was subjected to the other, and that the mass of inhabitants remained below both. If this was so, the apparent anthropological resemblance between the Satsuma type and the type common among the people must be again examined.

As regards the growth of land tenure and of feudal, local, and family institutions, these "Notes" only introduce us to the subject and suggest clues. But even these clues lead us into topics of the deepest interest and importance. We are tempted by what is here given us to speculate on what is not given. The number of analogies that may be traced between the growth of institutions in Japan and in Europe as well as in India and China, while it does not necessarily indicate ethnological relationship (though that aspect is not without some importance in view of the Accadian kinship

ascribed by Baelz, Garczynski, and others to the Japanese, portrays a parallelism of development which cannot fail to be of great consequence to the European student of feudalism, land tenure, and local institutions.

It is of course not to be expected that we shall find specific resemblance in the land system, early or late, so far as that depends on methods of agriculture. Rice-culture and wheat-culture are essentially different in their requirements. Maine's remark, made in reference to India, is here applicable. "The conditions of agriculture in a tropical country are so widely different from those which at any period can be supposed to have determined cultivation in Northern and Central Europe as to forbid us to look for any resemblances, at once widely extended and exact, to the Teutonic three-field system. Indeed, as the great agent of production in a tropical country is water, very great dissimilarities in modes of cultivation are produced within India itself by relative proximity to running streams, and relative exposure to the periodical rainfall." Though Japan is by no means a tropical country, it is characterized by an abundant precipitation of rain, and water is here, as in India, the great agent in rice-cultivation. For any marks of early customs which would have been a result of the three-field system or of the use of the plough, we need not look.

In the early division of land the lowest units were all square, as was the Roman provincial unit. We do not find an oblong measure of land until we reach the *tan* (.245 acre), the sides of which were in the proportion of 30 to 12 (later, 30 to 10), and this was composed of a number of these square units. The latter apparently had their origin in the length of a measuring rod used in the setting off of land. This length was no doubt determined, just as was that of the European rod, by some peculiarity of the early system of cultivation which made a certain implement of nearly fixed dimensions preeminently convenient as a measure of length. The balk, however, was an exigency under either system of cultivation, and this we find in Japan, under the name of *ase*. This, as in Europe, was often cultivated. It appears that there were rules determining the appropriation of the grass grown upon it. Whether, as in England, the lord ever claimed any right to its product, does not yet appear. But no one who has seen a Japanese field of to-day can doubt that the balk, which varies as much in size and direction as it did in England, must have played an almost equally important part in the agricultural economy.

Each portion enclosed within certain of the larger balks bore a name, and such a piece was called "name-land" (*myōden*, *meiden*, *na*). The name once was that of the occupying family. A piece of land, for example, was called "Takehisa-na" or "Nagashira-na," after its reclaimer. The name did not shift with the occupant, and each owner, no matter how many pieces he possessed, still distinguished by their titles the different "name-lands." That such separate entity should continue for a long space of time is *a priori* probable. Dr. Simmons was told that no "name-land" could be mortgaged or subdivided by will. In the *Minji Kwanrei Ruishū* there is mentioned the *ge-fuda*, a certificate copied from the land-register (*na yoseshō*), showing the total possessions of each individual. "In the *ge-fuda*," it is said, "a person's property is recorded as a whole. The different pieces of land do not have each a separate *ge-fuda*. When therefore the owner of several portions of land wishes to sell a single one, it is impossible to do so at short notice, for as the transfer of the *ge-fuda* is necessary, a new *ge-fuda* must be made out, and this can only be done at the time of the revision of the land-register, which ought to occur every March, but in practice takes place only once in about three years." This custom is related of the province of Suwo, and indicates that to a very recent date the "name-land" there preserved its integrity. We are here reminded of the fact that the English virgate was often known by a family name, and that it was probably at one time indivisible by succession.

We do not yet know the size of the Japanese "name-land," but it is likely that it was much smaller than either the hide or the virgate, perhaps smaller than the acre. From the records available for the purpose it is by no means as easy as in the case of the English records to determine the size of the original "name-land" unit, if indeed there was a uniform size, and a thorough collation of various sorts of evidence will be necessary for the purpose.

The "name-lands" in the possession of a single owner, it should be added, were scattered about within certain limits, and it is in this respect that

the Japanese system draws near again to that of Western Europe. It is true that the three-field system is in the case of the latter partly responsible; but even within the single field this scattered ownership appears, and its kinship with the similar phenomena occurring in Japan is not unlikely. What is here needed is the careful examination and collation of as many field maps as possible. It was the custom in the middle ages, with many large landowners, to make a map of their possessions and transmit it with the title-deeds, and many of these should be available. The study of the arrangement of fields at the present day in the more secluded parts of the interior would afford complementary data of great value.

As regards the early distribution of land among the immigrant tribesmen, we find back of the manorial system of *shōen*, which was a later development of the ninth and tenth centuries, an account of a method of allotment indicating an earlier stage of tenure similar to the earlier stages traceable in Europe. This was the allotment of *ku-bun-den* (mouth-share-land) described in the code *Taihō Ryō*, published 702 A.D. and summarised in the Society's Transactions (vol. VIII. part 2) by Mr. Tarring. This system, as promulgated in the *Taihō* code, was evidently not merely a new one, but the final stage of a system already passing away. At successive periods in the next two hundred years proclamations commanding an allotment were made, but they seem to have been carried out for a short time and in scattered regions. Probably in the epoch before the seventh century, where records are not plentiful, the system of allotment was in full force; and the *Taihō* legislation was merely a strong effort to preserve from dissolution a system against which circumstances were too powerful. Certainly at that time a process of change was going on. The smaller freemen were falling into the power of the local chiefs. Oppression by subordinate officers and the necessity arising from scanty resources was driving the body of the people into subjection to the powerful landholders. "Many officers of provinces (*kunitsukasa*) gave waste land to the people, while they kept the good land. Officers and rich men forced others to exchange good land for poor," &c. (*Fudōsan*). The central Government made decree after decree, denouncing these practices, but without success. After the period Engi (901-922), *ku-bun-den* distribution seems not to have been heard of. Meantime a new impulse was given to the tendency towards the acquisition of large properties and the subversion of small ones. The temple lands, too, increased enormously by gifts of land, the owners transforming themselves into tenants. All these influences militated against the *ku-bun-den* distribution, and it disappeared entirely. The most probable view of its significance, as it appears in the *Taihō* code, is that it was the early system adopted for the division of lands among the members of the various tribes, that the circumstances mentioned in *Fudōsan* had before the eighth century begun to weaken this early custom, and that we see it in the *Taihō* code at a time when its dissolution was becoming apparent, and when the vain attempt was made by legislation to prop a practice which when it was in full force lay only in custom,—in other words, a time when the tendency, seen in early communities, of such a re-distribution to become theoretical only, was beginning to be clear.

What is needed is a careful comparison of the distribution systems already known to us in other early tribes with that of early Japan. One collateral benefit of such a comparison will be the necessary abandonment of the ideas of pomp and regal sovereignty which are associated with the early history of the Japanese conquerors. Much harm has been done in this respect in the way of obscuring the true paths of investigation and of concealing important clues. It is not necessary to declare, with the Philistine, that the so-called Emperor Jimmu was only a Tartar pirate: but it is indispensable to recognize that early Japanese history deals with the doings of tribes and clans of primitive habits and institutions, that the leaders were chiefs and not emperors, and that their annals have as much human interest and are as capable of rational explanation as are the records of the European tribes whose story is better known to us. It is for this reason that one may regret the use, in Professor Chamberlain's translation of the *Kojiki*, of such terms as "Prince," "Suzerain," "Duchess," "Grandee," "Departmental Suzerain," as representing certain elusive terms of the original. Difficult as the task of establishing a nomenclature must be in such a case, one result of the system adopted is to add a glamor of grandeur to the history which cannot but obscure the true simplicity of the records, and may perhaps mislead one who is not constantly on the watch to make the necessary mental correction.

Whether or not the distribution of *ku-bun-den* was made on the principle of distributing, not equally, but to each head of a family according to the number of slaves, *pro numero cultorum*, is another of the interesting questions. It seems clear that the total holding of each family was made up of the several amounts of land due to each man and woman therein; that is, if there were five men and three women the total holding would be 12 *tan*, and this would be the property of the family as a unit. The same principle was also followed with reference to the holdings of the slaves of the family; in fact, it is out of the question that these can be supposed to have possessed a separate interest in land. The "public slaves" who received the full share of a freeman would seem to have been communities of the conquered native tribes, settled probably in villages of their own, who, submitting in large numbers at one time and by treaties of peace, had not been appropriated by individual invaders, as were those who resisted in battle; and these, though they remained serfs, yet lived in their own communities, and were naturally given a larger share of land. This supposition would help to explain the fact that the land of public slaves could not be alienated. It was quite unnecessary to say that slaves of individuals, living in or about the master's homestead, and palpably *adscripti glebas*, could not dispose of land; but it would be important to declare that those who were left in their original communities and were not attached to the household of a freeman should not dispose of their land. The distinguishing mark of such serfs would be, not their mode of residence, but their inability to deal with their land.

A portion of the system of distribution recorded in the *Taihō* code is quite distinct in principle from the *ku-bun-den* allotment, and seems to be the growth of a later time (perhaps at the period *Taihō* it was comparatively new) when the conquest of new regions placed a larger territory at the disposal of the conquering race. It would seem that the same invaders, who in a simpler stage of development employed the *ku-bun-den* system, were later required to administer a large conquered territory, and that certain measures were then adopted, perhaps from China, which resembled the Roman provincial land system and ended in similar results. Large shares of land were given to the administrators of the provinces, and also large discretion in management. To the soldiers were granted amounts of land varying with the grades of service. This land and that given to officials was free from taxation. The new settlements of the north and east made *shin-den*, a term which might almost be rendered *latifundia*. The same growth of large estates, and the same oppression by the provincial officials characterized each country. Just as, in the *ager publicus*, the relative standing of the occupants came to be *veterani*, *coloni*, *laeti*, so there was a tendency for the land-endowed soldier to rise in importance as the free owner of a small plot degenerated. The survey of the land, too, based on rectangular units, here resembles the systematic, artificial arrangement of the Romans.

The tendencies alike of the system thus applied to the newly settled *ager publicus* of Japan and of the *ku-bun-den* system in the old land were not different from those which appeared under like influences in Europe. If we do not find, in the condition of affairs which followed, a method of tenure corresponding exactly to the type known as the manorial system, it is at least certain that similar causes were at work, and that the result as regards the distribution of land and differentiation of the classes of population was almost precisely the same.

In the first place, the strife between local chieftains and the fortunes of war led to the conversion in many regions of free proprietorship into tenancy. The same result came about in other and perhaps more numerous instances through the stress of taxations, which forced the owners of small holdings to better their position by the process of surrendering and receiving back their lands, well known as "commendation." The familiar immunity of nobles and large landholders from taxation was here as common as in Western Europe; and beginning with the ninth century we find a continual effort, and a successful one, by holders of *shōen* or untaxed land to increase their tax-free-holdings by every means in their power. The corresponding distress on the part of the smaller proprietors is also clear. Another of the parallel traits is the frequency of gifts to temples and the extent of the acquisitions made by ecclesiastical bodies. One deed of the year 1323 shows the process in a nutshell:—"This land has been hitherto cultivated by the owners as *ku-bun-den*, but henceforward it is to belong to the temple Tōdaiji, and the cultivators are to render *chishi* (a rent in kind)." One result of this is that here as in Europe some of the richest sources of material

1 *Myō* and *mei* are the Sinico-Japanese, no the Japanese pronunciation of the same character, meaning "name;" *den* means "wet cultivated land."

for the reconstruction of mediæval institutions are the collections of documents carefully preserved in the temples.

What was the result upon the classes of the population? On the one hand the landed nobles came to draw practically the whole revenue of the country. The taxes rendered by the mass of the cultivators were now due to the territorial lords, not to the central Government. This seems to have been the immediate cause of the decline of the Mikado's power. Among the territorial aristocracy thus formed no equilibrium was permanently attained until the genius of Iyeyasu established it; and this endured until the advent of the foreigners in the present century supplied the shock necessary to destroy it.

On the other hand the classes below the territorial nobles and independent landed proprietors were constantly assimilated, to a greater or less degree. The small free proprietors became free tenants; the serfs became servile tenants. The freemen degenerated in position; the serfs rose somewhat. A general class of cultivators arose, single in being separated widely from the landed noble, but multiple in that it contained well-marked subdivisions, resting more or less distinct.

One of the subjects which, if thoroughly known would contribute great light in the verification of this description, is that of manorial service. Obviously the distinction between free and servile tenancy must rest almost entirely on the nature of the services rendered, and it is just here that at present but little information can be offered. In the Japanese literature of taxation, however, a large amount of material is waiting, and the documentary sources will also prove abundant. Even as it is, many familiar traces may be detected. The services of mediæval times in Japan were rendered with money, with the products of the soil, and with labour. There were *precariae* as well as fixed services. One cannot expect to find the same products rendered or the same labours performed as in Europe. *Mutatis mutandis*, however, the general nature of the duties and the methods of performance were entirely parallel.

Each *han* or daimiate seems to have developed, in later times, a system of labour services by which land of a given area or assessment was to furnish the labour of one man for a given number of days in each year. These services included, besides the ordinary work of cultivation, the furnishing of transportation, the repairing of roads and buildings, the manufacture of cloths of different kinds, and other incidents found also in the European manors and fiefs. A commutation of personal services into the payment of money or of cloths and other articles also took place in the later periods. It is reasonable to suppose that farther investigation would reveal a development similar to that which occurred in the history of European services, a progress from continuous and indefinite amounts and kinds to periodical, limited, and definite amounts and kinds, from incommutable personal labour to labour commutable into monetary units and payable in money. At an earlier period, too, we see traces of another interesting phenomenon in the history of services,—the change from voluntary offering to regular obligations.

In each *han* of any size there was a central administrative office controlling the various *bugyô* (=*seneschals*) and other officers, and a study of this central system has yet to be made. It was the chief counsellors and managers of these central offices who took such a leading part in the efforts which resulted in the overthrow of the Shogunate, and the sterling capacity for government which they have since exhibited may be ascribed in some degree to their training and experience as administrators of the fiefs.

The Notes of Dr. Simmons, so far as they relate to the interior life of the *mura* are concerned with the facts of a comparatively recent period and of districts where the greatest movement towards independence had occurred. Whatever may have been the case in those regions where the incidents of feudalism remained longest, in the Tokugawa dominions,—the principal field of observation for both Mr. Ootomo, Dr. Simmons' chief informant, and the author himself,—where the Government had become really only a great landlord and where there had been a strong tendency towards uniformity of tenure and services, we find that the old distinctions between classes, so far as they had been clearly marked by different relations with the territorial lord, had disappeared, and the class differences had become essentially social. The traditional position of certain families was now seen in the predominant influence which they enjoyed in directing the affairs of *mura*. The order of precedence was distinctly marked and strictly preserved. In the *yoriai* or assembly it determined the seats of the various members. It had weight in the decision of debated points. We cannot now certainly distinguish the descendants of freemen

and those of serfs, nor the villages of freemen and those of serfs; nor can we estimate the relative numbers of each. In the class distinction (*osa-byakushû, nooi, kiu-ka*, etc.) we are strongly reminded of the structure of the village communities in the Punjab and elsewhere; and it can hardly be doubted that we shall find these and other terms to be more or less connected with historical differences between freeman and serf, proprietor and tenant, family or clan villages and colonies.

This material of recent times becomes important in its bearings on the subject of communal property. In one sense the facts of Japanese village life have a special importance; they show how many communal customs, apparently purely local in origin, were the result of superimposed laws. It is possible that the numerous instances of this sort may be suggestive and helpful in the examination of Western village communities. Take, for example, the cultivation of the land of a deserting farmer by his *kumi* or by the village. Nothing could at first sight point more clearly to a certain community of property, a corporate holding of land by the village. But on further examination this custom proves to have been commanded by the Government, with the object of preventing a diminution of revenue.

We must, too, draw a distinction, here as elsewhere, between earlier communal customs arising from family, house community, or tribal life, and later ones arising from the existence of a superior authority, that is, from the corporate responsibility imposed in many ways by the manorial or feudal lord upon the communities of cultivators. These include all those customs which flow from the fact that the *mura* was from the standpoint of the lord the producing unit. The necessity of the *mura*'s consent for the use of forests and for the sale of any part of the common forest, the local settlement of local taxes, the power of returning confiscated land to a repentant deserter,—these were some of the more direct results. Perhaps the only custom, mentioned in the Notes, which might be claimed as a distinct mark of the early tribal community is the necessity of the consent of all the farmers to the settling of strangers on village land. But even this case is not an unmitigated one and at best throws no light on the question whether the land was merely held in common in undivided shares or was held by the village as a corporate body. There are as yet no data sufficient to assist in the mooted question whether the community of property of later mediæval villages is a result of other later influences or is a remnant of an earlier tribal communism.

It remains to call attention to a few customs of a miscellaneous character, which may serve to show that the interest of the material we are considering is broader than the subjects that have been touched upon.

The family was of course the unit of social life, and the coherence of the family, with the practices and institutions involved in it, was still a marked feature. Although there existed a Government prohibition against the sale of land, there was as Dr. Simmons states, a strong dislike to alienate a family inheritance,—a sentiment noticed particularly in India and elsewhere. We find, too, that, in this respect a distinction was made, as in India, between inherited property and property reclaimed or acquired from others. A similar characteristic sentiment, the unwillingness to alienate to strangers, has already been noticed in the practice of requiring unanimous consent for the admission of new reclaimers of *mura* land; and in Ebeling's alienation of land to fellow-villagers alone was allowed.

The distribution of a patrimony during the life of the father was quite common in mediæval, even later times. The retirement (*inkyo*) of the father followed as a matter of course, and in the account of the Hida House Communities is noticed a peculiar consequence of this, that the father thereafter eat *hiye*, with the rest of the family, while the son alone eat rice.

Upon the question of primogeniture there is no clear information. It may be noticed, however, that, as has been observed in India and elsewhere, the eldest son often takes not the whole, but only the largest share of the patrimony. The frequency of adoption suggests interesting questions. It seems hardly possible to explain it entirely on grounds of the desire for the perpetuity of the family. More than one fact—for instance, the occurrence of laws forbidding adoption just before death—points to the desire to evade customary restrictions on alienation as an important influence.

The strength of the ties of what has been called Literary Fosterage, observable alike in Japan, in India, and in early Ireland; the existence here as in India of an hereditary class of persons outside the social pale—the *yeta*—whose touch was impure and who followed special occupations and lived in

separate quarters; the widespread employment in later times of a system of suretyship not based on family; the *go nun gumi* system, which seems for the past three hundred years to have been not much different in principle from the Anglo Saxon *frith guild*; the system of long term mortgages, closely paralleled in India, and suggesting the *beklemregt* of Groningen; the *yei kosaku*, or emphyteusis, a variety of a tenure well known in Europe;—these and numerous other customs and institutions, as yet almost wholly unexamined, may be cited as evidences of opportunities that exist here for the student of comparative institutions.

What is now needed is the utilization of the stores of original material to be found in the temples, a few libraries, and numberless family treasure-chests. It must be admitted,—and without discredit to Japanese scholars,—that the volumes written upon the subject in Japanese are beyond a certain point useless. Learned and accomplished as their authors are, they have never looked at the subject from the standpoint of the European scholar, for their training had made it impossible. The solution of the problems on modern scientific lines can be attained only through the younger generation, trained under modern methods, or through foreign students having before them the material to be investigated. That this result in no way casts disparagement upon the enormous industry and the vast acquisitions of the older generation of Japanese scholars need hardly be said. That it is inevitable, they themselves are the first to admit. It is to-day a subject of deep regret to more than one of the most eminent that it is too late for them to attempt to make acquaintance with European scientific literature. Coöperation in work between the older and the younger generation would seem to be the only method of utilizing fully their accumulated stores of learning. It is to such of the younger scholars as Kaneko, Miyazaki, Matsuzaki, Suzuki, and others that we must look for immediate and strenuous efforts to make accessible the material that exists so abundantly. It is not unlikely that the Japanese Government will come forward in a liberal spirit and give official assistance in the rescue and preservation of the documentary treasures. If, as in the case of the treasures of art, a commission could be appointed to visit the temples to collect, examine and classify the records they contain, and to publish translations of a part or of the whole, the first and most important step will have been taken towards the solution of the historical questions that are forcing themselves upon our attention, and a lasting benefit will have been conferred upon science.

The PRESIDENT, after thanking Professor Wigmore in the name of the Society for the great trouble he had taken in editing Dr. Simmons' full and valuable notes, and generally in preparing the paper portions of which they had just heard read, said there was one point about these notes which made them less valuable than they might otherwise have been. He referred to the fact that Dr. Simmons had often omitted to give authority for his statements. Many of these had been gathered in conversation with his Japanese friends; and a doubt naturally arises in one's mind as to how far these are reliable. All that can be said is that many of the views expressed in Dr. Simmons' notes were entertained by the Japanese themselves. What was desiderated in these notes was a clear reference in every case to the source of information, whether documentary or oral. This, he understood, had not been done by Dr. Simmons. It was interesting to note how in some respects the same thing cropped up no matter where we went. Similar circumstances gave rise to similar facts. For example it had been noted that those who conducted legal affairs in these communities were not supposed to receive any fees. The same rule held in Rome; and in England a barrister's payment is in the eyes of the law an *honorarium* not a fee. Interesting as the extracts read had been, he was sure that members would find in the paper when published a collection of still more interesting facts and opinions.

Dr. AMERMAN said that, although he quite agreed with the remarks made by the President, he thought it well to point out that, however much Dr. Simmons had relied on his conversations with Japanese, he had not relied altogether on such. He had collected quite a library of books both printed and in manuscript. Some of these had been very difficult to obtain, being collections of traditions which had come down for centuries before being put down on paper. It was matter of deep regret that some of the more valuable of these had quite disappeared since Dr. Simmons' death, and could not be traced anywhere.

Professor WIGMORE said that in the preface (which he had not read to the meeting), he had catalogued all the sources of information used by

Dr. Simmons; and that wherever it was possible he had obtained corroborative or contradictory evidence from trustworthy sources. In all such matters there are two distinct sources of information, documentary and oral. Where a written law exists nothing more is to be done. But there are many traditions and customs for which no written law exists; for these information must be oral. From some old book a written law might be unearthed and translated, which a short conversation with an intelligent Japanese would prove to have fallen into disuse many years ago. In fact information derived from written law was of little value; while information derived from unwritten custom was of supreme importance. In the paper he had indicated where documentary or oral would be best.

Professor DROPPERS remarked that having come late he had possibly missed portions bearing more particularly upon land tenure, that is upon the relation of tenant and landlord in regard to rent, taxes, and so forth. The portions he had heard dealt rather with village customs than with land tenure. Accordingly he wished to know if Dr. Simmons had collected any information calculated to throw light on a very dark subject indeed.

Professor WIGMORE replied that as the subject was not one which Dr. Simmons had given close attention to, his notes bearing on it were naturally incomplete. In a part of the paper which had not been read, he had himself tried to draw some conclusions, guided in large measure by what is known to have occurred in Europe. The subject of land tenure in Japan is an exceedingly difficult one. The customs and laws no doubt varied greatly from daimyate to daimyate. A very elaborate study of the numerous records preserved all over the country would be the first step in attacking the problem. Perhaps fifty years hence, the Asiatic Society may be prepared to give the subject a lucid discussion.

The meeting then adjourned.

UNION CHURCH.

Few if any more enjoyable gatherings have been celebrated here than that held on the 5th inst. at the Mission Home, No. 212, Bluff. Upwards of one hundred and twenty of the members and congregation of the Union Church availed of the general invitation kindly extended by the Ladies of the Home, and it is safe to affirm that no Church Sociable has previously been given in Yokohama which at all approaches it in all the features of a successful meeting. The meeting opened with the well-known hymn "Blest be the tie that binds," and prayer. After the chair had been taken by Mr. W. F. Page, who in a few well-chosen remarks explained the business of the evening, and touched upon the occasion for gratitude the Church and congregation undoubtedly had in connection with the unlooked-for success the undaunted efforts put forth by certain of their number, notably Mr. C. V. Sale, had called forth, the Rev. E. S. Booth rose and read the following report of the Committee appointed early in the year for the consideration of the proposal for the purchase of a pipe organ.

The committee appointed at the meeting of the Church held on 31st January last to consider the suggested purchase of a pipe organ have now the pleasure to report that over 500 dollars was collected or promised during the first three days' canvass, and that it was consequently decided to accept Mr. Griffin's very kind offer to select an instrument on his visit to England.

After much research involving the inspection and trial of over 50 Organs one was purchased from Messrs. Conacher & Co., of Huddersfield, for £200. It arrived here in July per steamer *Pak Ling* of the C.S.M.S.N. Co. to whom we are indebted for a very substantial reduction in freight, and was opened as you are all aware on the 9th October by a first recital and concert.

Its cost has been defrayed by subscriptions and by the proceeds of two Recitals given with the kind aid of several of the leading vocalists of Yokohama, and a choir of about 35 of our fellow-residents. The treasurer's statement of account is in your hands.

It would be impossible to acknowledge in detail the many kind proofs of interest and sympathy which the undertaking has called forth, but the committee desire especially to express their thanks to Mr. Griffin, whose share in bringing the matter to a successful issue is known to you, and it is owing to his goop judgment that they are able to congratulate the Church on having obtained so excellent an instrument at so low a cost.

EUGENE S. BOOTH,
Chairman of Committee.

UNION CHURCH ORGAN FUND.—TREASURER'S STATEMENT.

Subscriptions received per list	1,714.00
Proceeds of first concert	22.00
Proceeds of second concert	185.00
Received for ship damage	15.00
Cost of organ including freight and insurance	
£100 @ 3/6	574.84
£100 @ 3/6	751.76
Duty	54.57
Landing	11.80
Fire Insurance to July, 1891	25.41
Night watchman, 3 months	18.40
Foundations and blower's room	81.75
Platform and repairs to roof	25.00
Carpenters, cordies, and sundries	75.50
Expenses, first concert	55.62
Expenses, second concert	40.34

J. North, Esq.	5.00		
		Total	\$1,708.00

The report was carried unanimously. Immediately those present had resumed their seats the Pastor, Rev. Dr. Meacham, addressed the meeting as follows:—

Our two Organ Recitals and Concerts were successful because we had so much help from friends who are not members of our church. Acknowledgment of our obligations has been made time and again to these ladies and gentlemen. I have something else to speak of. There is a gentleman, unhappily not present with us to-night, to whom we are indebted for services beyond our power of recompense. Those concerts would not have been held; Mr. Griffin's transcendent mastery of the organ would not have been exhibited; Mr. Keil's consummate ability as a conductor (by many of us) would not have been known; the fine execution of the talented vocalists we should not have heard, but for the genius and self-sacrificing labours of Mr. Crane. It is true that sometimes he was assisted by Mr. Griffin, more frequently associated only with our young and promising organist, Mr. C. V. Sale, to whose popularity and business ability we are indebted for so excellent a report from the Organ Fund Committee. It is not known, I am sure, but by very few how much time was given and how severe and protracted were the labours cheerfully undergone by Mr. Crane in bringing our organ, which reached Yokohama in July in a state of partial wreck, into good form for church service. It will be fresh in your memory how many Sabbaths the frame of the organ stood apparently complete before we could hear it, and judge of its merits. It was thought by some that the time was needlessly prolonged between its arrival here and the public Recital. Yet all that time Mr. Crane was employed five evenings out of six for weeks together, yes, for three months (giving up not only his evenings but his summer holidays and his Saturday afternoons), in the arduous task of getting our noble instrument into a state of preparedness for the work to which it is consecrated. Mr. Crane's fine mechanical skill, his great musical talent, his time and labour have been given freely and rejoicingly—for it has been a labour of love—to the end that we might have an organ which would better help us worship God in the service of song. We are forbidden to give expression in some tangible form to the feelings of gratitude which swell in our hearts and which are entirely unsatisfied with the utterance of mere words. We submit, however, with the best grace we can to the restraints which are put upon us. But all the more we crowd into our words all the meaning that these words can convey. It is therefore with the liveliest feelings of appreciation that I move, that the hearty, unanimous, and standing vote of thanks of this Church Meeting be given to our dear friend, Mr. Crane, for services which we can never repay, but which we pray the Great Head of the Church will abundantly reward in the day of eternity.

This motion was seconded by Mr. Sale, and carried amid applause, every one standing in token of the high appreciation in which Mr. Crane's rare and self-denying labours were held. Regret was expressed that Mr. Crane had made it quite clear to his fellow-Committee men that more tangible evidence of the Church's gratitude would only fail in its avowed purpose. The Chairman alluded to the very considerable part Mr. Crane's family had played in the arduous work, though mostly in an indirect way. One other duty of a less agreeable nature concluded the purely business part of the meeting. A successor, pro tem. was chosen in the place of Mr. W. Hoggan, who for about two years had, despite great occasional inconvenience, discharged the work of Treasurer. Mr. Wilkin moved a very warm vote of thanks to Mr. Hoggan for his generous and patient help, in the course of his few remarks alluding in terms of high commendation to the assistance rendered the Church. The motion was promptly seconded and carried unanimously. This proved the signal for the retirement of a large number to the capacious school rooms, where during the rest of the evening all who could made merry, recalling only in a slightly less degree to the bystanders than to themselves, old days at home when surroundings often conducted to sunny and unrestrained mirth and festivity. The gathering broke up at 10.30 o'clock.

THE BARRISTERS BILL.

Art. 1.—*Bengoshi* (Barristers) shall carry on the following business in compliance with applications made to them, or in accordance with the orders of Courts of Law in cases provided by law.

(1.) Making statements and arguments in ordinary Courts of Law on behalf of parties concerned therein.

(2.) Drawing up petitions, preliminary documents, and other documents necessary for legal proceedings.

Art. 2.—Barristers may not carry on business until they have had their names registered on the rolls of *Chiho Saibansho* (Local Courts), *Koso-in* (Appeal Courts), or the *Daishin-in* (Court of Cassation).

Art. 3.—Those who desire to apply for registration of their names on the roll of Barristers in the *Daishin-in*, shall send in their applications, addressed to the Minister of State for Justice, to the *Kenji Socho* (Prosecutor General), while those who desire to apply for registration of their names on the roll of Barristers in *Koso-in* or Local Courts, shall send in their applications to *Kenji Cho* (Chief Procurators).

Art. 4.—The application for registration should be accompanied by a document certifying the following items, and such document should be supported by the guarantee of two or more Barristers:

(1.) That the applicant has successfully passed the examinations according to the Rules for the Examination of Barristers provided by the Minister of State for Justice.

(2.) That before making the application, he has been studying in the office of a Barrister, or in a court of law for a period of one year and a half or over.

(3.) That he has attained the age of 25 years.

(4.) That his mental and physical conditions render him capable of carrying on the profession of Barrister.

(5.) That he has never committed any act of felony (such as have committed offences against the State, and have succeeded in recovering their public rights, are excepted) nor any act of misdemeanor punishable with hard labour, and that his general conduct is good.

(6.) That he has never been legally declared insolvent or bankrupt, or if so declared, that he has since discharged his liability to his creditors.

(7.) That, in case of applying for registration on the rolls of an appeal court, he has been a Barrister practicing in a local court for 5 years or more, and in case of applying for registration on the rolls in the *Daishin-in*, he has been a Barrister practicing in an Appeal Court for 5 years or over.

Art. 5.—Graduates of the Law Department of the Imperial University or of the late Tokyo University can use their certificate of graduation in place of the certificate mentioned in Article 1. Those who have been judges, procurators, or professors of law in the Imperial University, or who are qualified to be judges or procurators, can apply for registration on the rolls of local courts by simply certifying to the above facts as well as to items No. 4, No. 5, and No. 6, mentioned in the preceding article.

Candidates who have been judges, procurators,

or professors of law in the Imperial University for five years or more, can apply for registration on the rolls of Appeal Courts by certifying to the above facts as well as to items No. 4, No. 5, and No. 6, mentioned in the preceding article.

Candidates who have been presidents of local Courts, or Judges of Appeal Courts, or Judges of the *Daishin-in*, or judges, procurators, or professors of law in the Imperial University for ten years or more, can apply for registration on the rolls of the *Daishin-in* by certifying to the above facts as well as to items No. 4, No. 5, and No. 6, mentioned in the preceding Article.

Art. 6.—Any Barrister whose name has been removed from the rolls of a Court at his own request, can apply again for registration on the same or other rolls, and if he proves his former registration he need not certify to items No. 1, No. 2, and No. 3, mentioned in the 4th article.

Art. 7.—The processes relating to registration shall be in accordance with the orders of the Minister of State for Justice.

Art. 8.—Persons whose applications for registration have been granted, shall, before such registration, pay into the courts where their names are to be registered, the following fees:—

500 yen for the *Daishin-in*.

300 yen for *Koso-in*.

100 yen for Local Courts.

Art. 9.—Courts having such rolls under their control shall advertise the fact of registration in the *Official Gazette*.

Art. 10.—Barristers who have obtained registration shall give notice of the same to the Association of Barristers to which they belong, and shall deposit the following securities with such association:—

Barristers belonging to the *Daishin-in*, 200 yen.

Barristers belonging to *Koso-in*, 150 yen.

Barristers belonging to Local Courts, 100 yen.

Art. 11.—Any Barrister who has been registered on the rolls of a local court, can carry on his business in such court as well as in *Ku saibansho* (district courts) within the jurisdiction of such local court.

Any Barrister who has been registered on the rolls of an Appeal Court, can carry on business in such Appeal Court as well as in the lower courts within its jurisdiction.

Any Barrister who has been registered on the rolls of the *Daishin-in* can carry on his business in any court of law.

SHIKATA GA NAI.

Lecture delivered by Mr. F. T. PROGOTT, at the English Law School in Tokyo:—

On the last occasion when I had the honour of addressing you, I spoke at some length concerning the reasonable man. To-day I propose to talk to you about the position which another prominent person in everyday life holds in English law. Him I call the Unknown Workman.

In my former lecture I endeavoured to show you that the English Common Law, unscientific, chaotic, as many of its critics contend that it is, does rest, if we tread the track through a very forest of decisions, on a substantial basis of principle. On this basis all the great edifice of our case law has been reared: to this principle all the appalling array of our rules has an ultimate reference. The English law, in establishing its great canon that all men must at all times and in all seasons conform to the standard of reason, and in leaving the standard itself to be determined by twelve men drawn promiscuously from the reasonable community, endeavours to fulfil the great function of law; in order that the right or the wrong of any human action may be determined, to appreciate the springs of human actions in general, and above all to study the weak side of human nature as well as the strong. And so our law requires conformity to a standard which is no utopian ideal, but is based on the common course of conduct among the community to which the person belongs whose action has to be judged. A deep insight into the lives ruled can alone give satisfactory rules of living. This intimate connexion between law and life it is which gives vitality to the law, a vitality evidenced not by the multitude of the occasions on which its majestic existence is made manifest by rigorous enforcement, but by the silent unconscious every-day obedience to it. A closer connexion between the springs of law and the springs of life it is impossible to find, look we the whole world over, than in the great Common Law of England.

It is on the silent obedience to the spirit of the law that I dwell to-day, on its necessity in all the unobserved, the unseen actions of the work-a-day world, and on the complete dependence of the well-being of the community upon it. The

consideration of this question brings into very strong relief the weakness of the law: its powerlessness to enforce obedience to its rules on a thousand occasions on which disobedience to them may work incalculable harm, may bring death or disaster to many. In cases innumerable the actual wrong-doer cannot be discovered; he is one among the hundred who have contributed to the creation of the machine, for example, which has suddenly broken down, but it would pass the wit of man to discover him and bring his negligence home. So the wrong-doer goes unpunished, and if there is no vicarious liability in another person, or if some other negligent person has not intervened to change the natural or probable current of events, the person injured has no redress.

This weakness is common both to codified and uncodified bodies of law, and the one is not more elastic than the other.

I pause for a moment to correct in anticipation an erroneous conclusion which I know that some of you will draw from some of my remarks, and to refute a statement which has recently appeared in print. You know at once to what I allude: it is inevitable that I should touch incidentally upon it; it is the attitude of English lawyers towards Codification.

A learned author has said by implication—something irrelevantly it must be confessed to the question then in hand—that English lawyers oppose codification because it would touch their pockets. From so wise a mouth never yet came so unwise an utterance. It will not be out of place, however, that you, students of English law, should fully understand the opinions of English lawyers on a subject which is of such importance to your own country.

A lawyer would forfeit his claim to sanity if he opposed codification simply. The merits of codification are not to be discussed generally, but specially with a view to the necessities of any given country. Now with regard to codification for England, there are some who doubt whether it is practical, and there are others who doubt whether any specific good would come of it in the way of making the law clearer or reducing the amount of litigation; for a code after all is not a royal road for making people behave themselves and preventing them quarrelling. Well, as I say, some English lawyers may hold strong views on the subject of codification for England; but that subject has no interest at all for you: it has nothing whatever to do with the question of codification for Japan. And if your admiration for English law is so great as to lead you to think that at this momentous time of your national history it would have been better to do without Codes, that you might now safely wait till a fabric of law like our Common Law has been built by your diligence and erudition, believe me you are profoundly in error. Codes in Japan were inevitable, and not regrettable. But what I said to you before, I say to you again: the virtue of what you are so intelligently learning, the efficacy of the skilful training you are receiving in English law, will reveal themselves when the good time comes, and the joy of argumentative strife waxes fast and furions round the articles of your Codes, and the big briefs roll in upon you.

Let us now go back to our subject—the unknown workman—and study some familiar illustrations of the consequences of his carelessness, and the way in which the law deals with them. You are walking in the street; a cask rolls out upon your head from the upper window of a godown. As you are going into a shop a pile of packages set up in the doorway tumbles down upon you, or a piece of glass falls from the window of a neighbouring shop which has been broken by a ladder falling against it. Some one evidently must have set the cask down, or piled up the packages, or left the ladder standing carelessly; or some one must deliberately or negligently have knocked them down. The chances are that in such case it was some careless workman who has gone home to his dinner, and it is beyond your power to find him. Well, the law helps you to redress by making an assumption. Neither barrels, nor cases, nor ladders fall of their own accord: there must have been negligence somewhere. Therefore where it is reasonable to assume that this negligence was that of the servants of the owner of the premises, the law says "the thing speaks for itself;" it holds the master liable unless he can rebut the presumption, as by showing that an earthquake had tumbled them over. This is the principle *res ipsa loquitur*; and its application to the three cases just mentioned is as follows. The owner of the godown will be liable because his servants only touch the barrels stored there. For the same reason the shopman will be liable, because no one but his servants can have stacked the cases at his door. But the owner of the adjoining premises whose windows were broken by the falling ladder will not be liable, for some one else over whom he had no control, for whose

acts he is not vicariously liable, may have left it in an insecure position or kicked it over: the ladder was not necessarily used in his own business, and therefore the assumption of law cannot be applied, the facts of themselves do not warrant any definite conclusion. You have no redress unless you can find the wrong-doer. Here then is an instance of the unknown workman going scot free, and no one being liable on his behalf.

Let us take another case which is dealt with on another principle. A man is walking along the highway and passes under a railway bridge. A brick falls out of the bridge and injures him. It may have been loosened by frost, but it must have been the frost of many nights, not of one, and therefore only one conclusion is possible: the railway company were bound to keep their bridges in repair; the bridge was out of repair and caused damage; therefore they must take the consequences. This is another example of *res ipsa loquitur*. But the company works through inspectors, foremen, common workmen, often by contractors, and they in their turn by foremen and workmen. The brick is loose owing to the negligence of one of more of these many subordinates, but which will remain unknown. The negligence of the unknown workman is covered by the breach of the initial duty laid on the company. Thus in this case redress to the injured party is granted not by reason of any assumption of vicarious liability, but by an appeal to the broad duty laid on the company which excludes any consideration of the actual wrongdoer, whether he be a servant, an independent contractor, or a contractor's servant. The books are full of such cases; the chapters on the laws of Negligence and of Master and Servant teem with them; it is unnecessary for me to elaborate them for you. I have given you sufficient examples of the first principle which deals with the unknown workman. If it can be assumed that he was the servant of another, and was engaged in his master's business when he acted negligently his master is liable. And again if it can be shown that there was a duty to do without negligence what the unknown workman has done negligently, or to do what he has failed to do, then he will be liable on whom the duty falls. The unknown workman is ignored. But because he is ignored he is none the less liable for his own misdeed, only he cannot be traced. We know that someone has blundered, but we cannot find the blunderer.

The second principle which affects him tells in his favour, and would protect him even if he were not unknown. It springs from the operation of the law of Remoteness of Damage. Known or unknown, a man's liability for the consequences of a negligent or any other wrongful act ceases at a certain point. When these consequences, causes and consequences, have ceased to follow one another in a natural, probable, or reasonably-to-be-expected manner, the act which set them in motion ceases to be considered in the eye of the law as the cause. That which has unexpectedly intervened and directed the sequence of events into a new channel is the cause, and again the unknown workman drops out of consideration. The intervening cause may be inanimate, and then the unknown workman goes scot-free; or the intervening cause may be an animate being whence arises some chance of redress: for the new act may be itself negligent or otherwise wrongful, and then its author is liable. Curiously enough the law does not discriminate between the two wrongful acts, attributing the effects carefully to their two authors, but in many cases makes the later wrong-doer responsible for all. Take this case. The workmen of a carriage-builder fit the parts of a wheel together negligently. A coachman drives it negligently and runs over some one, but the injuries are considerably aggravated, by the fact that the badly-made wheel breaks down at the critical moment. The coachman, or his master, is liable, although the unknown workman has very materially contributed to the disaster.

It would occupy all the time allotted to me if I were to trace these principles by example through all their ramifications: two more well-known cases will be quite sufficient. There is a potico in front of a railway station; its roof is being mended; through a hole in it a plank and a roll of zinc fall on an unsuspecting passenger much to his hurt; at the moment of the accident he looks up and just catches sight through the aperture of a man's legs. Both parties to the quarrel seem to have taken it for granted that the plank and the zinc fell in consequence of something this man did upon the roof: but the man himself had passed among his fellows and had become the unknown workman, whom neither lawyer nor layman could discover. Once more. A ship is in dry dock having her hull painted; the dock-owner supplies the staging and all the necessary appliances; the ropes of the staging give way, and one of the painters is thrown to the bottom of the dock and suffers grievous bodily harm. It is not difficult to see the unknown work-

man scamping his work, talking politics perhaps to his mates, instead of seeing that the ropes were sound before they were handed over. But who he was, by reason of his being one of the great unknown, has become as unimportant as the matter he was discussing. The question of redressing the wrong has to be fought on other grounds: relief has to be given, if at all, as against somebody who did not do the actual wrong. Now see how fine a distinction separates the case in which relief is given from that in which it is withheld. Arguments of the subtlest kind evolved out of the facts of the ship case a duty on the dock-owner which he himself had broken. A duty on the dock-owner mind you. Intervening contracts removed the question of vicarious liability as between master and servant. The duty on the person who had supplied the dock owner with the staging to supply it sound and good according to his contract, and its evident breach, was passed over. The dock-owner had practically invited the person injured to use the dock appliances provided for the work as incident to the use of the dock; the invitation raised the duty of taking reasonable care that the appliances were in a state fit to be used: and the findings of the jury showed that this duty had been violated.

Arguments no less subtle failed in the railway case either to evolve out of the facts any breach of an analogous duty on the railway company or to attach to it vicarious liability.

Think then, with regard to the actual cause of all the mischief, how powerless the law is: technical objections innumerable stand in the way of launching writs promiscuously and fishing for causes of action: the barriers between the unknown workman and his unfortunate victim are almost insuperable. The question underlies the whole course of daily existence; but the law reaches only the fringe of the difficulty, applying to it principles which do not even consider the actual wrongdoer. The unknown workman touches us at every point. How many do you think have assisted in bringing me from my house to this lecture hall? How many in making the journey from Tokyo to Yokohama as easy as it is? How many in constructing the ship that will shortly take me home to England? Five minutes careless work on the part of any one of them might do incalculable harm to those who have to rely upon their work; perhaps bring swift destruction upon them. And yet though the remedy is imperfect, we accept the risks every day without thinking, basing our acceptance on nothing but a reliance on the steadiness of a hundred and more workmen of whom we know absolutely nothing.

There is, however, a compensating element to this incapacity of the law to reach the actual wrongdoer. The British workman in spite of certain curious crooks in his character is a most estimable person. Take him all round he is not a careless workman: accidents will happen of course, but he never yet was known deliberately to scamp his work. If he were going out on strike at noon, he would be found doing his best work at half-past eleven. And why? Because he knows, it has been drilled into him from the earliest days of his apprenticeship, that human lives may depend on the excellence of his work: he knows that the public have confidence in him and feel that they travel with security. Not one of ten thousand artificers who have helped to build a train, the carpenters, the joiners, the ironsmiths, but knows what depends upon him, and works with a direct sense of individual responsibility, in spite of the fact that he knows too that a fault can never be brought home to him. And we, the public, know of this sense of responsibility and acquire corresponding confidence. And thus out of the very powerlessness of the law have sprung, by action and reaction, that sense of responsibility, and the feeling of confidence which are absolutely essential to the well-being and security of the community.

I speak now through you to a wider audience. Can you not see the connexion between this branch of the law of Negligence and the phrase I have taken as the text of my lecture, *shikata ga nai*? English children are told in their earliest years of a certain man who was called "Don't care," and who ultimately came to a bad end—he was hanged I think. And "Don't care" had a numerous family about whose fate nursery history is not so precise, though there can be little doubt that they too suffered the extreme penalty of the law, for their deserts were no greater than their father's. They were christened "never mind," "what does it matter?" "Can't be helped," and many other similar names. One of them was born in France; he had a nasty trick of shrugging his shoulders, and was called "*Tant pis*." But this expression *shikata ga nai* the world has come to take as representative of one queer side of the Japanese character; and there is not much difference between not caring for consequences

after they have happened and not caring for consequences before they happen. For all observers they stand in the same plane.

The march of Japan from her own civilization to the civilization of the West is marked by the usual incidents: steamboats, railways, omnibuses, telegraphs, electric lights, have appeared one after the other. But something more is necessary. The repose of Western civilization depends on that perfect confidence I have been talking to you about: the perfect confidence of the public in the unknown workmen on whom the safe conduct of these vehicles, the safe transmission of these dangerous elements depend.

This confidence can only be bred of the experience of many years. Does it exist in Japan? It is for you to answer, not for me. If I had to answer I do not think it would be in the negative. Indeed, I am disposed to say that the wonder which Japan has forced from the nations of the West arises not from the mere adoption of their appliances but from the fact that, certainly with regard to all public works, this confidence and this repose have already come into being. Does it extend any deeper? It would be premature as yet to insist upon an answer. It is for the unknown workmen to determine whether by-and-by it shall be yes or no.

But just as the law of negligence covers more than mere negligence in the ordinary sense, and includes neglect of proper precaution, recklessness, and heedlessness; so the feeling which *shikata ga nai* expresses may engender all the different forms of disregard of consequences. And just as the duties which the law of negligence deals with are precisely identical in point of principle with the duties which, under more definite names, are scattered through the whole law, dealing with every phase of life, and concerning every incident of it; so the spirit of *shikata ga nai* may influence for evil any and every action wherein care is necessary, forethought, right dealing, scrupulous behaviour, honesty of purpose, and consideration for others. And this whether in the narrow spheres of individual life, or in the wider scope of public duty.

Young men of Japan, I have something to say to you before I leave your shores. In your hands lies all the future destiny of your country. The generation that is passing away has begun the work: it is but begun, and it is for you to carry it forward to its legitimate end. Are you fit, are you fitting yourselves, for the task that the old men have laid upon your shoulders? Or is your work cramped by that influence for evil of which I have just been talking? Again it is not for me to find the answer; it is for you to be prepared to give it when the nation asks it of you.

There is a cry current among you, Japan for the Japanese: it is for you to show that it is not a mere empty babbling to the air. It springs from the best spirit in the world; it is one with which an Englishman must always be in sympathy, for in many a page of his own history the city of England for the English is written larger than life itself. But perverted, it will hurl the shouters into a sea of troubles. It is well for you that you should know that even in the minds of those foreigners who have your country's best interests at heart—believe me they are many—those who see the springs at work beneath the surface, there is a doubt whether the young men of Japan are equal to the stress and strain of the days that lie ahead. They see young men full of high purpose sacrificing themselves and their careers to the cause they have at heart; they see others sacrificing the public good to serve their own ambition! Among your younger officials are many who have realized that a career of usefulness cannot even be begun until they have been as little children in teachableness. But there are others, full of the pride of a newly acquired but somewhat slender stock of learning who rebel at the presence of foreign advisers in their midst, whose years of study number more than the months of those they have come to guide. There is a magnificent conceit about the possessors of a little knowledge: above all they court public recognition of it; they would be amusing fellows, and an interesting study were they not so dangerous. They at least will never consent to be among the unknown workmen.

But in the work which any State demands, many must be content to remain unknown: and in this State, more than in any, it is necessary that what the unknown workmen do should be done thoroughly, with earnestness of purpose, with a view to the public good, and with a complete effacement of the private aim.

Remember that here, of necessity, young men undertake offices which, in the countries lying to the far east of Japan, are filled by men only after they have reached their riper years of learning and experience. There is no one but wishes success to attend their labours.

As I come to this sheet of many notes I find them much scored and corrected. I had in my mind many harsh and critical things to say; but they are better hinted at than said; for it is ill to leave a country wherein one has been at least half guest with an ungracious word upon the lips. But the other, the adviser half of me, would leave a duty unfulfilled, if I did not pray in aid of the good work which so many of your young men are doing, a little less self-assertion on the part of some, a little more restraint of that spirit of *shikata ga nai* which must deflect the good from its ultimate aim, the better. What Japan has done in the past, what she is doing to-day, is enough to make her wonder whether it is really nothing to all those who pass by. The nations of the West are very busy with their own affairs, but they are watching, and are ready to admit that it is indeed something to be proud of. But what Japan will do to-morrow concerns her and them more. The time to serve up butter before you on a lordly dish has passed away; it is the time for criticism of the hardest, sternest sort: criticism, not of what the old men have done but of what the young are doing. Men of the greater sort never yet shrunk from criticism, never yet regretted to admit that they were for the better for it.

Students of the English Law School of Japan, you too will soon have your part to play in public life. When you come, as some of you must come, to administer the laws of your country, I trust you will never shake off the influence of the great Common Law of England whose principles you have been so eager to understand, nor forget to follow in the footsteps of the great Judges who have established them.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 6th.

Professor Koch has discovered remedies for the prevention and cure of diphtheria and tetanus.

London, December 9th.

A resolution has been introduced in the House of Representatives ordering the Treasury to buy at the market price 13,000,000 ounces of silver now, the United States Government to afterwards confine itself to monthly purchases of silver of home production.

London, December 10th.

Mr. Parnell is going to Ireland to address meetings in the chief towns.

The adjournment of Parliament has taken place, and the House will not meet again till the 22nd of January.

In consequence of the stringency of the money market and a great depression in stocks, it is feared that a financial crisis must result; the Cabinet has met to discuss the situation.

The commercial crisis in the United States continues, and further failures are reported.

PASSENGERS.

ARRIVED.

Per German steamer *General Werder*, from Hongkong:—Mr. and Mrs. Theodor Hake, Mr. and Mrs. E. Gordon Lowder, Mr. and Mrs. E. Mullendorff, child, and European nurse, Mr. C. E. Rothe, Colonel Tanner, Messrs. Kamsrup, Tchan Ming Shan, Sego Iguchi, Dr. M. Koike, Dr. E. Nori, Dr. Suzuki, Mr. Hing Kee, Mr. Mishima, Mrs. Elisabeth Kopper and Mr. Kufferrath in cabin; 1 European and 19 Chinese in steerage.
 Per British steamer *Parthia*, from Vancouver, B.C.:—Dr. Laning, nurse, and three children, Miss Laning, Mr. and Mrs. E. L. Baker, Mr. Douglas Dick, Capt. Grant, Mrs. A. H. Rennie, Mr. I. B. Fisher, Mr. Jas. Johnstone, and Mrs. Jas. Strotthof in cabin.
 Per Japanese steamer *Nagato Maru*, from Hakodate:—Messrs. Sugiyama and Oligata in cabin; 22 passengers in steerage.
 Per Japanese steamer *Yamashiro Maru*, from Kobe:—Messrs. P. A. Nicolle, F. Shigihisa, and G. Yamashita in cabin; 3 passengers in second class, and 56 passengers in steerage.
 Per Japanese steamer *Omi Maru*, from Hakodate:—Messrs. Sonoda and Nakagawa in cabin; 5 passengers in second class, and 94 passengers in steerage.
 Per American steamer *City of Peking*, from Hongkong:—Captain C. F. H. Davidson in cabin; 2 Chinese in steerage. For San Francisco: Major E. Watson in cabin; 2 Europeans in steerage.
 Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Mr. and Mrs. F. Gillett and infant, Miss C. Rice, Messrs. H. A. Scheuten, W. Darlington, F. Darlington, Mizagawa, and Kiang Hang Lung in cabin; Captain Nicol and Mr. Itohida in second class, and 41 passengers in steerage.

DEPARTED.

Per Japanese steamer *Yamashiro Maru*, for Kobe:—Messrs. Nodzu and Kishi in cabin; Mr. and Mrs. Sengoku, Mrs. Kaga, Mr. Shiraiwa, Mrs. T. Ozawa, and Miss H. Ozawa in second class, and 56 passengers in steerage.
 Per French steamer *Djemnah*, for Shanghai via Kobe:—Mr. Geo. Sale, Mr. W. Callers, Mrs. Ford, Lieut.-Com. and Mrs. J. Marthon, Miss Werner, Messrs. G. Herrero, Bonnat, Alex. Park, Robert Henkel, Minollo, Dr. E. Monceaux, Messrs. la Conture, Mallet, Le Bourgne, Lasbleiz, Rubel, Leca, Miss Taki Suyeyoshi, Messrs. H. O. Newland, A. D. Smith, L. G. Probyn, J. Callers, Bedout and servant, Colcombet, A. Delecraz, James Winstanley, and Captain and Mrs. Bougouin and child in cabin.
 Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—Rev. Langborne Leitch, Mr. and Mrs. W. V. Drummond and child, Mr. C. W. Everard, Mr. J. Newcome, Captain R. Crawford, Messrs. C. Denby, Jun., R. Ide, J. Arikawa, H. Shiginobe, K. Yabe, Learned, and T. Darlington in cabin; Mr. H. Sue Heng and Mrs. and Miss Ide in second class, and 44 passengers in steerage.
 Per German steamer *General Werder*, for Hongkong via ports:—Messrs. W. W. Wells, F. O. Halifax, S. Akashi, Dr. S. Torii, Messrs. S. Kashimura, F. Schmucker, P. Aug. Holst, Takatsu Goro, and Hugh Fisch in cabin; 13 Chinese

in second class, and 3 Europeans and 31 Chinese in steerage.

Per Japanese steamer *Yamashiro Maru*, for Hakodate:—Messrs. Nishioka and S. Hayashi in cabin; Messrs. Saiki and Sawamoto in second class, and 42 passengers in steerage.

CARGO.

Per French steamer *Djemnah*, for Shanghai via Kobe:—Silk for France 416 bales; Waste silk for France 371 bales; Treasure for Singapore \$100,000.

REPORTS.

The German steamer *General Werder*, Captain Eichel, reports:—Left Hongkong the 29th November at 2.50 p.m.; had through the Formosa Channel strong breeze from E.N.E. and N.E. with rough sea; thence to port with light variable winds and very high easterly swell; delayed outside Sagami through dense fog from 9 p.m. on the 5th until 10 a.m. on the 6th December. Arrived at Yokohama at 1.10 p.m.

The British steamer *Parthia*, Captain Pantton, reports:—Left Vancouver the 20th November at 11.20 a.m. Arrived at Victoria at 5.45 p.m. and left at 6 p.m.; had moderate S.E. winds and fine weather; the 22nd moderate S.E. gale with very heavy sea; engines eased down for 10½ hours; the 23rd to 26th inclusive, moderate westerly winds with heavy head swell; the 27th fresh N.W. gale with very heavy sea, engines eased for 11 hours; the 29th crossed meridian in 49 N., fresh westerly winds and showers; the 30th fresh S.W. gale with very heavy sea, slowed for 15½ hours; the 1st December moderate westerly winds with heavy head swell; the 3rd and 4th moderate westerly winds and fine weather; the 4th passed *Batavia* at 5.50 a.m.; the 5th light southerly winds with heavy swell; at 2.45 p.m. passed O. & O. steamer *Belgic* bound east; the 6th light winds with passing rain; made the land at 3.40 p.m. Arrived at Yokohama the 7th December at 1.35 p.m. Actual time on voyage 16 days, 8 hours, 45 minutes.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Kobe the 6th December at noon; had fine weather and light northerly winds; passed Oshima at 9 p.m.; thence moderate N.N.E. winds and head sea up to Rock Island; afterwards light northerly air and fine weather up to arrival at Yokohama, the 7th December at 7.30 p.m.

The British steamer *Straits of Belle Isle*, Captain Grigs, reports:—Left Nanaimo the 4th November at 12.15 a.m.; experienced strong westerly gales right across. On the 23rd passed through fierce typhoon; vessel heave to for 36 hours, lowest barometer reading 28.69. On the 30th heavy W.N.W. gale; vessel heave to for 12 hours.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Hakodate the 6th December at 2 a.m.; had fresh S.E. breeze, overcast, with rain and heavy head sea in Tsugaru Straits; at 4 a.m. on the 7th wind and sea moderating and weather getting fine. Arrived at Oginohama at 1.45 p.m. and left the 8th at 5 a.m.; had light breeze, overcast sky, and easterly swell; at 8 p.m. wind and sea increasing rapidly with passing rain squalls; midnight fresh gale from south blowing, and heavy sea running, much water on deck; strong breeze and rainy weather continuing to Kanon-saki, when weather moderated. Arrived at Yokohama the 9th December at 10.45 a.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Kobe the 8th December at 0.45 p.m.; had weather cloudy with heavy rain, strong S.E. gale with high sea in the Kii Channel; with heavy squalls; passed Oshima the 9th at 0.20 a.m. wind shifting to the S.W. and taking off a little; weather clearing but heavy sea continuing; passed Rock Island at 3.20 p.m., moderate and fine weather from thence to port. Arrived at Yokohama at 10 p.m.

The Japanese steamer *Omi Maru*, Captain Wynn, reports:—Left Hakodate the 8th December at 2 p.m.; had light easterly winds to Shiiya saki; thence strong S. to S.W. with rain and heavy head seas to Kinkasan; thence to port light northerly winds and fine weather. Arrived at Yokohama the 10th December at 5.45 p.m.

The American steamer *City of Peking*, Captain Searle, reports:—Left Hongkong the 6th December; had fresh E. and N.E. winds and fine weather. Arrived at Yokohama the 1st December.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 6th December at 5.50 a.m.; had light E. and N.E. winds with fine weather. Arrived at Nagasaki the 8th at 1 a.m. and left at 5.50 p.m.; had light N. winds with thick rainy weather. Arrived at Shimomoseki the 9th at 2 p.m. and left at 2.45 p.m. Arrived at Kobe the 10th at 3 p.m. and left the 11th at 2.30 p.m.; had light winds and fine pleasant weather to Rock Island; thence strong N.E. winds to port. Arrived at Yokohama the 12th December at 0.30 p.m.

LATEST COMMERCIAL.

IMPORTS.

The Import trade still continues in a lifeless and depressed condition. Sales reported during the week only amount to 110 bales English Yarns, 30 bales Bombays, and 2,500 pieces glb. Shirtings.

COTTON PIECE GOODS.

Grey Shirtings—8½ lb, 38½ yds, 39 inches	\$1.35 to 1.90

EXPORTS.

RAW SILK.

Our last issue was dated the 5th inst. since then settlements amount to 1,000 piculs divided thus:—Hanks 31, *Filatures* 559, *Re-reels* 204, *Kakada* 171, *Oshu* 35. There have been no direct shipments during the week, the total business remaining at 1,000 piculs as above.

Our Market has been fairly steady during the week, holders being encouraged by the amount of daily trade. Exchange too has been fairly steady; the fluctuations not being large.

The principal buying of late has been decidedly for Europe; shippers picking out suitable parcels and operating currently at quotations; more es-

pecially in *Filatures* and *Re-reels*. Cables from abroad are still dull in tone and report some financial uneasiness again both in New York and London. Some large holders here are strongly inclined to keep their silk locked up till next year. Other and smaller men will probably want money for the end of the year and may sell their goods at some reduction on present quotations.

The stock list shows a further diminution of 500 piculs, which decrease is likely to continue, as arrivals will now become smaller as the winter season advances.

There have been two shipping opportunities since our last, the French and German mails; the former, *Djemnah*, on the 7th inst., took 416 bales for Europe. The latter *General Werder*, took no Raw Silk. Present export to all parts is now 10,676 piculs, against 24,730 piculs last year and 20,555 piculs on the 12th December 1888.

Hanks.—Not much business in these during the week; the only purchases being two or three parcels of common *Hachoji* at \$472½.

Filatures.—Steady buying from day to day for the Continent of Europe, and prices on the whole have been fairly well maintained. Good *Mino* and *Usen* sorts with some prime *Koshu* have brought \$605, \$600 and \$595 respectively according to chop. In second grades many parcels at about \$570 have passed the scales. For the United States but little has been done; some medium *Koshu* at \$585, with some good *Shinshu* at \$592½, but only in small quantities. The large *Filature* owners of *Shinshu* and *Koshu* are wealthy men and do not seem at all disposed to part with their silks at the present low rates.

Re-reels.—Some fair purchases have been made in this, principally in medium kinds at prices ranging from \$525 to \$540. One parcel of fair *Yoshu* was noted at \$570, with *Shorusha* at \$555. Also one small lot of good *Oshu* at \$590.

Kakada.—Some fairly large purchases in this department at prices ranging from \$520 to \$575; holders in this class have been fairly current, not having loaded themselves with dear cocoons as did the *Filature* men some months ago.

Oshu.—The only business in this class has been two parcels of medium *Sendai*, which were taken for Europe at \$500 per picul.

In Sundries no business for export.

WASTE SILK.

Trade in this branch continues on a moderate scale, settlements for the week being 550 piculs divided thus:—*Cocoons*, 92; *Noshi*, 78; *Kibiso*, 320; *Mawata*, 60.

Buying has not been very extensive and remains in three or four hands. Purchases appear to be, as before, mostly for Swiss account and prices for good quality are well maintained. This latter is

getting scarce, and the stock is decreasing both in quantity and quality.

The French mail steamer *Djemnah* took 308 bales of Waste and 63 bales Pierced Cocoons. The German mail steamer *General Werder* took 66 bales Waste for Italy. These departures bring the present export up to 14,386 piculs, against 12,623 last year and 14,791 at the same date in 1888.

Pierced Cocoons.—Buying in this class has not been large and consists principally of *Nafiko* at \$80 and \$70 per picul. Some common *Sakusan* brought \$25.

Noshi.—Business in this class has been small; good qualities being now very scarce. Some parcels of fine *Bushu* were done at \$130, but there have been no transactions in the great staple *Foshu*.

Kibiso.—Large business continues in *Filature* sorts; prices ranging from \$98 to \$113 for good *Shinshu* stock. Nothing done in *Hira* sorts except one lot *Mino* at \$62½.

Mawata.—This class has long been neglected, but during the past week about 60 piculs of *Irikin*, said to be mixed with old staple, has passed the scales at \$185.

No business in *Neri* or sundries.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with the latest machinery (are far superior to any others). The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 15 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c. &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
BARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
101, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Office:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 15. June 28, 1890.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 1908.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Courtes, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1867

NOW READY,

WITH COLOURED PLAN,
A FULL REPORT on the ERUPTION
of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.
To be obtained at the *Japan Mail Office*, or of KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

YOKOHAMA: SATURDAY, DEC. 20, 1890.

BIRTHS.

At No. 5, Katamachi, Iigara, Azabu, Tokyo, on the 12th inst., the wife of Mr. W. BARRIE of a Daughter.
On the 17th instant, at No. 65, Settlement, the wife of BARTIN H. PRATT of a Son.

SUMMARY OF NEWS.

THE Yokohama Telephone Exchange has been opened for business.

H.I.H. PRINCE YAMASHINA left the capital on the 13th instant, for Kyoto by train.

IMPORTANT speeches have been delivered in the House of Representatives by various Ministers of State.

H.R. IMPERIAL HIGHNESS PRINCESS KUNI ARIKO arrived at Shimbashi Station on the 16th inst., at 3 p.m. from Kyoto.

At the end of last month, there were 741 schools in the capital, of which 298 were public and 443 private.

THE Government granted on the 9th instant permission for the establishment of a Chamber of Commerce at Kobe.

INFLUENZA of a malignant type has prevailed in Yokohama lately, more than a thousand persons having been attacked.

It is reported that the *Tsukuba Kan*, which left Japan in June last for Hawaii, will return here on or about the 20th instant.

It is rumoured that important official changes will take place in the Kanagawa Prefectural Government before the close of the year.

MR. MIYOSHI TAIZO, Vice-Minister of the Judicial Department, who had been in Europe for some time, will arrive here on the 22nd or 23rd instant.

DURING last month, 1,372 patents were applied for at the Patents Bureau of the Agricultural and Commercial Department, of which 536 were granted. As compared with the pre-

vious month, this shows an increase of 66 applications, and a decrease of 394 patents granted.

A LARGE number of members of the House of Representatives visited, on the 14th instant, the *Takachiho Kan*, which is now lying in Tokyo Bay.

A GENERAL meeting of shareholders of the Tokyo Bay Steamship Company was held at the office of the Tokyo Shoko-kai, Kyobashi, on the 15th instant.

A VIOLENT storm swept over Shimohoyo-mura, Nishimuro-gori, Wakayama Prefecture, on the night of the 8th instant. Several houses were destroyed, 3 persons being killed, and 20 injured.

We learn that while the various parties in the Diet are of different opinions on political questions, they are all agreed as to one reform, namely, the abolition of the Metropolitan Police Bureau.

THE contract for the buildings of the Administrative Court, which it has been decided to erect near Kioizaka, Akasaka, was obtained by the Nippon Doboku Kaisha on the 15th inst. The work is to cost yen 27,160.

THE House of Representatives has voted, by a large majority, that the date of operation of the new Commercial Code should be postponed until the date fixed for the operations of the new Civil Codes, namely, January 1st, 1893.

A GENERAL meeting of Tokyo bankers was held at the Bankers' Club on the 15th instant at 5 p.m. Messrs. Minomura, and Yamamoto of the Bank of Japan attended the meeting. The proceedings lasted till half-past eight p.m.

MR. TSUTSUKI, a Private Secretary of Count Yamagata, who had been in Europe and America for some time, had audience of the Emperor at the Palace on the 13th instant, and reported as to the observations he had made in the West.

MR. TATENO, Envoy Extraordinary and Minister Plenipotentiary to Washington, has left for his post, had the honour of an audience with their Majesties the Emperor and Empress at the Palace on the 14th instant at 11 a.m.

AN exhibition of plants, consisting of varieties of pine, bamboo, plum, and other trees suitable for New Year decorative purposes, will be opened about the end of this month in the buildings of the Japan Art Society in Ueno Park.

AN earthquake was felt in the capital on the 11th instant, at 5h. 34m. 53s. p.m. The duration was 30 seconds, and the direction from S.E. to N.W., the maximum horizontal motion being 0.2 millimetre in 0.3 second. The shock was a sharp one.

URGENT telegraphic messages may now be forwarded at all hours by the following offices:—Tokyo, Osaka, Kyoto, Yokohama, Kobe, Niigata, Nagoya, Sendai, Okayama, Sakata, Hakodate, Nagasaki, Hiroshima, Kanagawa, Aomori, Kumamoto, Akamaga-seki.

AN ordinary Cabinet meeting was held on the 16th instant, at which all the Ministers of State were present. The proceedings lasted till a little past 1 p.m., when the Ministers of State for War, the Navy, and Education had to leave to attend the sitting of the Lower House. On

the following day, Count Oki, President of the Privy Council, and Viscount Tanaka, Superintendent-General of the Metropolitan Police, were present at a Cabinet meeting.

At a meeting of members of the Osaka Young Men's Christian Association held on the 17th instant, it was decided to present a memorial to the Imperial Diet in favour of the abolition of public prostitution.

MR. NARIKAWA YOSHITARO, eldest son of Mr. Narikawa Naoyoshi, Prefect of Miye, who graduated some time ago in the Law Department of an American College, has gone to Scotland to pursue his law studies in the University of Edinburgh.

ACCORDING to returns compiled by the Sanitary Bureau in the Home Department, the number of persons attacked by cholera throughout the empire from the commencement of the epidemic to the 16th instant, was 44,978, resulting in 31,414 deaths.

A TELEGRAM from Kuwana, Miye Prefecture, despatched on the afternoon of the 13th instant, reports that the laying of the line of the Kansai Railway Company between Kusatsu and Yokkaichi has been completed, and the road will be opened for traffic about the 20th of the present month.

CONSIDERABLE damage was caused in various parts of the country by the storm on the night of the 8th instant. In Nakahoyo-mura and Shimohoyo-mura, Nishi-mura, Wakayama Prefecture, the gale raged most severely, 3 men being killed, 10 men and women injured, 73 houses entirely destroyed or damaged, and 11 boats swept away.

THE members of the Kanagawa Prefectural Assembly had decided to erect the new buildings of the Kanagawa Normal School at Odawara. This decision has now been altered, for at the third meeting of the Assembly held on the 11th inst. it was decided to build the new school at Kamakura, ground for the purpose having been secured near the Tsuruga-oka Temple.

MR. YASUDA MOTOTARO, a resident of Hiroshima Prefecture, who had been engaged for many years in the study of engineering, has invented a new kind water-wheel, with which experiments were made on the 11th instant, at Kasugacho, Koishikawa, Tokyo, in presence of Marquis Asano and various distinguished military officers.

FOR a long time the belief prevailed among the fishermen of Hokkaido that the success of the herring fishery was due to the presence of whales, whose appearance on the coast heralded the approach of the herrings. For this reason the whale has been called *Fuku-no-Kami* (the God of Happiness). The notion now proves to be a mistaken one, for a small whale caught the other day was found to contain 16 *koku* (one *koku* = 2½ piculs) of herrings.

THE condition of the Import trade remains unaltered, and business is much the same as last reported. There have been very small sales of Yarns and Shirtings, other branches of the Manchester trade being entirely neglected. Low bids for small parcels of Iron are made, but the trade is inanimate. A parcel of Russian oil—25,000 cases—has been taken, but American is neglected. Sugar is dull. The Silk trade is spasmodic, according to the rise and fall of exchange, and rather more has been done in Waste Silk. The Tea trade is about finished. Exchange has again fluctuated.

EDITORIAL NOTES.

IMPERIAL JAPANESE DIET PROCEEDINGS.

HOUSE OF REPRESENTATIVES.—FRIDAY, DECEMBER 12TH.

Business before the House, a motion by Mr. Yamada Toji to rescind a portion of the Rules of the House of Representatives. The House assembled at fifteen minutes past one o'clock. The President announced that Mr. Takara Sanaye had presented a Bill to amend the Law of Procedure, and Mr. Ito Daibachi a Bill to amend the Regulations for Public Meetings and Political Associations, and that Viscount Aoki Minister of State for Foreign Affairs, would make a speech in the House on the 17th inst. with reference to the course to be pursued by the Government in respect of Treaty Revision. He also announced that the Memorials Committee had a report to make. Mr. Inukai Ki, acting for the Committee, then reported that there had been ten memorials presented to the House, but that all except two had been returned on account of not being prepared according to the forms prescribed in the Rules of the House; that of the remaining two one was a memorial relating to national affairs, presented through Mr. Yanagiwa Shichishi from Ogino Samon and 979 other inhabitants of the Prefecture of Niigata—the objects advocated being the conclusion of Treaties with Foreign Powers on equal terms, the improvement of domestic administration by simplifying documents, dispensing with superfluities, and reducing expenses of administration, and finally the development of the national resources—the other was a memorial presented through Mr. Kashima and three other members from Kono Binji, a native of Hingo Prefecture, praying that the Law of the Houses should be amended in respect of the election of the members of the Lower House, the methods suggested being to change the electoral districts by making each City or Prefecture into an electoral section; to reduce the qualifications of electors and eligible persons so that the inferior limit of age should be 25 years and of taxation five yen annually, and finally to fix the representation on the basis of one member to every hundred thousand units of population. The House then proceeded to the business of the day. The motion by Mr. Yamada Toji having been read, that gentleman explained that, recognising the necessity of removing at once from the 147th Article of the Rules of the House the six words relating to rank, occupation, and age, he had brought this motion as an urgent matter. On account of the provisions of this Rule the memorials signed by persons not possessing the prescribed qualifications had to be dismissed, and it might thus occur that matters of great importance were suppressed. In fact some ten memorials had been presented up to date, but most of them had been dismissed on account of not satisfying the provisions of the Law. He considered that the disabling qualifications should be removed so as to afford greater facility to the memorialists in accordance with the spirit of the Constitution, which allows memorials to be presented. Moreover, as the Rules of the Lower House, had not been publicly notified, the memorialists omitted to comply with their provisions through ignorance, and it seemed very hard that memorials sent from districts some hundreds of miles away from the capital should be dismissed on account of the omission of some intrinsically needless items. An alteration in the 153rd Article would also be necessitated if the 147th Article were amended. Mr. Takagi Masatoshi opposed the motion on the ground that unless the occupations and ages of memorialists were recorded, the House had no means of knowing whether memorialists were competent to claim a hearing about the subjects of their memorials. Mr. Kageyama Hideki moved that the proposition was of a nature not calling for debate, and that it should be put to the House at once. He was supported by Mr. Misaki and Mr. Hayakawa. The House voted for immediate decision, and Mr. Tachiiri Kiichi then moved that the Bill be dealt with off-hand, without proceeding to the second reading. The President, according to the 90th Article of the

Rules of the House, asked the House whether the second reading might be dispensed with. Objections were raised, and some discussion followed. The President gave notice that he should follow the Rules, and in reply to a question by Mr. Hotta Chiushi, said that if the House decided not to proceed to the second reading, the motion should of course be considered as dismissed. After allowing the discussion to go on for some time, the President called upon the House to determine whether the Bill should go to a second reading or not. A minority rose, and the motion was therefore dismissed. The President then stated that Mr. Nagaya Tadaaki had applied for leave of absence on account of illness, and the House agreed. The business for the next day having been announced, the House rose at 2.30 p.m.

HOUSE OF PEERS.—SATURDAY, DECEMBER 13TH.

The Special Committees on the Barristers Bill and the Weights and Measures Bill assembled in the House of Peers at 10 a.m., and proceeded with their investigations. The Heads and Managers of Sections also attended and transacted business. The Committees remained in session until 4 o'clock in the afternoon, and the President left the House at 5 o'clock.

HOUSE OF REPRESENTATIVES.

The House of Representatives did not meet on the 13th instant, but the President, Vice-President and Secretaries attended at 9 a.m. The Committee on the Budget also assembled at that hour, and proceeded with its investigations. Count Matsukata, Minister of State for Finance, and Count Oyama, Minister of State for War, were present as Government Delegates. The Vice-Ministers of various Departments also attended for the purpose of answering questions put by the Committee or giving explanations. Business continued until 4 o'clock in the afternoon.

HOUSE OF PEERS.—MONDAY, DEC. 15.

Business before the House was as follows:—To consider applications for leave of absence presented by Mr. Kokushi Yorimasa, Mr. Iwamura Michitoshi, Count Ogasawara Tadanobu, and Mr. Shibusawa Yeichi. The first reading of the Bill for amending the system of Registration, and the election of a special Committee to investigate the Bill. The House assembled at 10.30 a.m. The President announced that a change in the order of the members' seats had to be made on account of Professors Toyama and Kikuchi having received an increase of official rank, and a Secretary read out the new order. The President then reported that Count Ohara Shigetomo had been elected a member of the Memorials Committee, to fill the vacancy caused by the resignation of Mr. Iwamura Waro, and that the standing Committee on Finance had distributed itself in the following divisions and elected a chief in each division:—(1) Annual Income division, Mr. Tomita Tetsunosuke (chief), Count Hirohashi Masamitsu, Messrs. Shimogo Dempei, Obata Tokujiro, Yamada Jo, Yoshida San'yemon, and Kuwada Tojiro. (2) For the Departments of Foreign Affairs and Justice, Mr. Su Kōhei (chief), Viscounts Satake Yoshitada, and Seki Hironao, Messrs. Hosokawa Junjiro, Watanabe Ki, Murata Tamotsu, and Ito Miyuji. (3) For the Departments of Home Affairs and Education, Viscount Yuri Kimmasa (chief) Viscounts Tachibana Taneyasu, and Matsudaira Noritsugu, Messrs. Yamaguchi Naoyoshi, Uyemura Masanao, Kato Hiroyuki, and Hamano Shin. (4) For the Department of Finance, Marquis Ikeda Akimasa (chief), Viscount Matsudaira Nobumasa, Messrs. Shibusawa Yeichi, Hirata Tosuke, Kawada Koichiro, Furuichi Kei, Midzunoye Ko, Kage Nobumori, Sakurai Ihei, and Takizuchi Yoshinaga. (5) For the Departments of War and the Navy, Viscount Miura Goro (chief), Viscounts Tani Tateki, Toriwo Koyata, Yonetsu Masatoshi, Watari Masamoto, Mayeda Masana, and Mr. Kikuchi Dairoku. (6) For the Departments of Agriculture and Commerce and Communications, Mr. Itami Shigekata (chief), Barons Senke Takatomi, Nagao Moriyoishi, Messrs. Kaneko Kenaro, Hodzumi Nobushi, and Watanabe Jinkichi. The House then proceeded to the business of the

day. The applications for leave of absence were granted, no objection being raised. Passing to the first reading of the Bill for amending the system of Registration, Mr. Shirane Senichi, Vice-Minister for Home Affairs, acting as the Government's Delegate, stated that the law of Registration now in force was promulgated in the 4th year of Meiji, soon after the Restoration. Its principal purpose was to facilitate the preservation of public peace and order by assisting the identification of the outcasts and vagrants who were to be found all over the country, remnants of the feudal system then just abolished. Naturally, therefore, the law was of a special and imperfect character, not altogether suited to ordinary circumstances. The Government has been for years engaged in investigating the subject, but owing to the grave effects of any change in such a law, no thoroughly satisfactory system of amendment had been devised. Laws dealing with civil and criminal affairs were applied only when cases arose calling for their exercise, but the Registration Law had to be daily and hourly put into operation among our forty millions of people, since it covered the sphere of such constant incidents as marriages, deaths, births, changes of domicile and so forth. When the new Civil Codes come into force, the certificate of status (*Mibun shosho*) provided for in them will have to be in accordance with the law of Registration. Among European nations the individual is the basis of everything, but in Japan the family is generally considered for the purposes of certificates of status; and it is a difficult problem to decide which of the two methods is the more beneficial. The speaker believed that the family system would best meet the requirements of the people of this country. Marquis Hachisuka, pointing out that the election of committees took too much time and was troublesome if made according to the prescribed process, asked whether it would not be well as a general rule to trust the President to nominate them. He further proposed that the election of a Committee on that day should be made by balloting as usual, but that the examination of the ballots should be conducted by the secretaries in four groups, each group with a certain number of members to oversee it. Mr. Miura Yasushi seconded this proposal, and Marquis Daigo suggested a slight addition to it. Mr. Shimanouchi moved that the President be entrusted with the appointment, and was seconded by Mr. Yamaguchi Naoyoshi and Viscount Hayashi Tomoyuki. Viscount Fukuba Bisei said that, the Bill being very important and requiring careful investigation, the election of the Committee should be made in accordance with the method prescribed by the Rules of the House. Viscount Komatsu Yukimasa and Admiral Yamaji spoke in support of Mr. Shimanouchi's proposal. Viscount Ogiu Tsune then ascended the rostrum and spoke at length, stating that to entrust the President so frequently with the nomination of committees was improper. He therefore supported the proposition to proceed in accordance with the Rules of the House. The President commented on the vagueness of the statements made by some of the members, and asked them to be more explicit, so as to facilitate the process of taking votes. After some little discussion, the President called upon those to rise who seconded Mr. Shimanouchi's proposal to leave the appointment to the President; and a minority rose. Marquis Hachisuka's motion was then put and lost. The President thereupon announced that the election should be made by voting according to Article 36 of the Rules. The balloting was then proceeded with by the 182 members present, and the ballot box having been sealed, the House took a recess at 12.15 p.m. On its re-assembly at one o'clock, the ballots were examined, and the following members were found to have been elected:—Baron Makimura, Marquis Hachisuka, Viscount Hotta Seiyō, Mr. Miura Yasushi, Count Hirohashi, Mr. Oki Morikata, Mr. Murata Tamotsu, Mr. Hodzumi Nobushige, and Viscount Okochi Masatada. The President reminded the members that although the Committees appointed were not limited as to time in investigating the matters entrusted to them, yet they should remember the advisability of finishing their tasks

early, so as to avoid the inconvenient contingency of their not being ready when the House required their reports. The House then rose.

HOUSE OF REPRESENTATIVES.—MONDAY DEC. 15.

The business before the House was a motion by Mr. Nagai Matsuyemon to postpone the date of operation of the new Commercial Code and of the Regulations relating to it. The House assembled at 1.40 p.m. The President announced that Count Oyama, Minister of State for War, Viscount Kabayama, Minister of State for the Navy, and Viscount Yoshikawa, Minister of State for Education, would speak in the House on the 16th with reference to the interrogations presented by Mr. Arai Shogo, and that Mr. Mutsu, Minister of State for Agriculture and Commerce, had intimated that the question put by Mr. Arai was of too vague a nature to be answered; also that the Government had appointed Mr. Shirane, Vice-Minister for Home Affairs, as Delegate for the Registration Bill, and Mr. Mitsuoki, Vice-Minister of Justice, to represent the Government in respect of the motion to postpone the enforcement of the new Commercial Code; finally, that a motion to rescind Ordinance No. 84 of this year, by Mr. Watanabe Matasaburo, a motion to change the term of collecting the land tax, by Mr. Okada Rioichi, and a motion to appoint a Special Committee to conduct investigations with reference to a reform of the system of land taxation, had been presented. The House proceeded to consider the motion for postponing the date of enforcing the new Commercial Code. Mr. Nagai Matsuyemon, the mover, ascended the rostrum and made a brief statement to the effect that the Commercial Code ought to be put into operation simultaneously with the new Civil Code, whereas the Government had decided to put the Commercial Code into force on the 1st of January, 1891, and the Civil Code in the beginning of 1893. This was the first point to which he objected. Secondly, the new Commercial Code contained many unsuitable provisions, and abounded in peculiar phraseology. Its operation could not fail to produce great inconvenience in the practical transaction of business. His original idea was to introduce a Bill for amending these defects, but as the date of the Code's operation was near at hand, he had no choice but to move for postponement. Were postponement granted, he purposed bringing in a Bill to amend or rescind the Commercial Code. His address was short and disappointing, for the members had expected to hear a long argument from him as mover. Mr. Toyoda Bunzaburo, a member from the city of Osaka, which is regarded as the place eminently anxious for the speedy enforcement of the new code, then spoke in opposition to the motion. He said he knew very well that the new Commercial Code was not free from defects. The use of unusual and difficult words and the presence of conflicting provisions might be cited against it. But no law could be perfect from the outset. Alterations and corrections must be gradually made in accordance with the results of practical experience. He did not see any necessity for the simultaneous enforcement of the Commercial and Civil Codes. He should like to be shown any reason for such necessity. With regard to the argument that the date of operation should be postponed in order to give more time for studying the Code, he should say that the two years asked for would be hardly enough for the general public, whereas persons interested in the matter had already studied the measures sufficiently. These were the points he urged in opposition to the motion. He then proceeded to state the reason why the speedy operation of the Code was of the utmost necessity. During the past few years the financial condition of the country had been gravely impaired by the ruinous and demoralizing effects of huddle companies, an evil which threatened to develop still more in the future. The only remedy was to enforce the new Commercial Code, especially the part relating to companies. It was true that the laws of Insurance and Bankruptcy were by some considered too strict, but they were essential for securing the safety of commerce

and promoting credit in business circles. Many points might be enumerated to show how much the enforcement of the Code would benefit commerce, but he would refrain from going into them. Lastly, he declared that those who were anxious to have a postponement were people engaged in transactions of a speculative nature, who apprehended that the operation of the Code would put an end to their cunning and deceitful schemes. Mr. Motoda Hajime, who is known to be one of the warmest advocates of postponement, ascended the rostrum and spoke in support of the motion. He said that he should first refute the arguments of Mr. Toyoda. The latter had admitted that the new Commercial Code was imperfect, and therefore there was no occasion to insist on that point. He would proceed to briefly answer the preceding speaker's query as to the reason why the Commercial Code should be enforced simultaneously with the Civil Code. That reason was to be found in the first article of the Commercial Code, which provided that all deficiencies in the Code should be dealt with according to the general principles of the Civil law. This would clearly show that the former should not precede the latter. Mr. Toyoda had asserted that two years would be of no practical value for the study of the Code, but even in the case of laws like the Penal Code and the Local Government enactments, periods of more than one year were allowed for purposes of study, whereas for the Commercial Code which contained a greater number of articles, only a few months had been given. This was in fact imposing laws by force on people who were ignorant of them. To those who maintained the opinion that the people did not need any thorough acquaintance with the law, he would say that if such was the case there was no necessity for making Codes of Law at all. On the other hand, where was the necessity for putting the Commercial Code in force from the beginning of next year? Some might say that it was necessary to enforce it on account of Treaty Revision, but it was simply absurd to pretend that Japanese Codes were dependent on the course of diplomacy. There could be no valid reason for enforcing a law which, however appreciated by foreigners, would be productive of great inconvenience to, and confer no signal benefits on, a nation of over forty millions. It might be urged that the defective points could be corrected as occasion presented itself, but that would be making the Japanese people a *corpus vile* for experiments in law. Codes inviting correction would be valueless as Codes. The sudden enforcement of the Commercial Code would give a great shock to the mercantile world of Japan, and might produce disastrous effects. Mr. Suyematsu Saburo spoke in opposition to the motion. He explained that the civil law referred to in the first article of the Commercial Code did not mean the Civil Code to be enforced in 1892, as interpreted by the supporters of the motion, but meant the unwritten civil law now in force. The other side asserted that the time allowed was too short for the necessary preparations to be made before the enforcement of the Commercial Code. What preparations were they, he should like to know. The provisions contained in the Rules for carrying out the Commercial Code, from Article 5 to Article 20, showed that no special preparation was needed. The Government had been engaged in drafting the Commercial Code since 1875, and no doubt due account had been taken of Japanese customs and conditions. Some of the old customs were quite unfit to be any longer followed in the present advanced stage of society, and the Commercial Code would remedy these. The phraseology of the Code was criticised, but so long as the spirit of the laws embodied in it was sound, the language did not matter materially. Similar complaints had been heard when the Penal Code went into operation. Finally, on account of the want of a definite Code the judges did not give similar judgments in the same suits. The future commerce of this country must gradually have closer and closer connection with foreign countries, and

therefore the new Commercial Code was imperatively needed for the guidance of business men. Mr. Okayama Kanekichi, in support of the motion, declared it unreasonable to say that as commerce was cosmopolitan, the Commercial Code should be put into force even if the nation had to suffer more or less by the process. For his part, he thought that since the Commercial Code would affect Japan's relations with foreign States, it should be well considered and made as free from defects as possible. Nothing could be more disadvantageous to the Japanese, inexperienced as they were in the provisions of the new Code, than to ask them to compete under the same laws with foreigners who were well versed in such matters. It was contended that the words "civil law" in the Commercial Code did not mean the Civil Code to be enforced from the 26th year of Meiji, but what then could they mean? It was impossible to distinguish anything that could be defined as civil law from among the mass of laws now operative in this country. If it was felt necessary to give time for preparation by issuing regulations relating to the enforcement of the Commercial Code, why should such a necessity apply only to a limited section of the mercantile classes and not to the entire body? Why not postpone the enforcement altogether until a fit occasion? The Commercial Code provided for customs that did not yet exist in Japanese mercantile circles. If it was considered necessary to provide for things that might occur in the future, possibly the country might one day discover occasion to make provisions for commerce with the inhabitants of the moon, or for navigation by balloons. Commercial law was a private law, and should not be too much interfered with by the legislature. It was improper on the part of the Government not to have submitted such an important enactment as this new Code to the Diet. From every point of view, therefore, the enforcement of the Code should be postponed until the 26th year of Meiji, so as to give full time for people to consider it maturely. Mr. Rikuchi Kanji opposed the motion. The grounds relied on by the supporters of the motion, he said, were only two, namely, that the Commercial Code was difficult to comprehend and that certain provisions in it were opposed to the tradal customs of this country. These points might, perhaps, be advanced as reasons for rescinding the Code, but certainly not for postponing its operation. If the supporters of the motion really meant what they said, two years' postponement would be of little use to them. At present, owing to the want of a standard law to be applied by the Judges in the Court, different judicial views were often held on the same points of law according to the different schools of jurisprudence to which the Judges belonged. Therefore it was most advisable to enforce the Commercial Code at once so as to supply the Judges with a standard. The opinions of Tokyo merchants who carried on their business under the protection of the Government, did not represent the general opinion of merchants of this country. The merchants of Osaka, the acknowledged centre of commerce in Japan, were unanimous supporters of the speedy enforcement of the Code. Mr. Konishi Jinno-suke then spoke in favour of and Mr. Inouye Kakugoro against the motion. Mr. Oyagi Bichiro said that he should vote for the motion. He was of opinion that no imperative need existed for hastening the enforcement of the Code, whereas good grounds for postponement until 1893 had been adduced. Undoubtedly the Company and Bankruptcy laws were much needed by commercial society, and might well have been separately put into force. But there was surely no reason to promulgate a Commercial Code in its entirety simply on account of the necessity felt for a part of it. As to the alleged want of unity in judgments, the enforcement of the Commercial Code could not remedy it, since the points where the opinions of judges differed were not distinctly dealt with in the Code. Mr. Miyagi Kozo, in opposition, said that the supporters of the motion criticized the phraseology of the Code, but from the nature of the Japanese lan-

guage it was impossible to avoid the use of such phraseology, imperfect as it might be considered. If the phraseology were considered a reasonable ground for objecting to the Code, the enactment of new laws in modern Japan would be virtually impossible. The Code was condemned as having been compiled without due regard for Japanese commercial customs, but such an assertion betrayed ignorance of the true facts. The drafters had taken every means of ascertaining the customs of this country, and had paid most careful attention to them in preparing the Code. Besides, although people talked of Japanese commercial customs, it would be a very difficult task to point to any customs that could be regarded as established. In point of fact, trade customs had differed appreciably in different localities until some twelve years ago. It must not be forgotten that nearly twenty years had been spent in the careful preparation of the Code. The original draft by Dr. Roesler, compiled on purely scientific principles, had passed through repeated revisions before being completed, so that the Code now promulgated was quite different from the original draft. It was impossible to give sufficient time to enable the general public to thoroughly understand the Code. Most probably they would take pains to do so. The seven months allowed were enough for those directly interested in the provisions of the Code. Lastly, the subject should not be considered a question between the Government and the Diet. The House must not forget that it concerned our relations with foreign nations. Mr. Tanaka spoke at length in support of the motion. When he descended the rostrum the President announced that as many members had expressed their desire to speak on the subject the session would be adjourned till next day. After the Orders of the Day had been read the House rose at 6 p.m.

DECEMBER 16TH.

The House assembled at 5 minutes past one o'clock. Counts Saigo and Oyama, Viscount Kabayama, and Mr. Yoshikawa, Ministers of State, were in the seats at the right of the President, and Counts Yamada and Goto, and Viscount Aoki in those on the left. Prince Kitashirakawa and Count Ito, President of the House of Peers, were present. The President announced that before opening the debate Count Oyama, Minister of State for War, Viscount Kabayama, Minister of State for the Navy, and Mr. Yoshikawa, Minister of State for Education, would address the House. Mr. Arai Shogo asked leave to make a short address to the Ministers, and ascended the rostrum. He believed, he said, that the presence of the Ministers for War, the Navy, and Education, was owing to the request that he and his fellow members had made to the Minister President of State for an explanation of the policy of the Administration, and therefore he should briefly state the principal points of the request. They had listened to the speech made by the Minister President of State some days ago, and had not been able to consider it as a speech explanatory of the policy of the Administration.—(Hear, hear.) That the Minister President should make a speech on the policy of the Administration was necessary not only on the Diet's account but also on that of the Government. If the policy of the Administration was approved by the people, well and good, but if otherwise the Government would have to change its methods. As it was customary in the countries of Europe and America that the Prime Minister should explain the policy of the Administration on the opening day of parliament, they had expected that the Minister President would do so, but finding his speech too vague, they had formulated certain interrogations. In making these interrogations, they did not think of asking for the details of the Government's policy, but wished to be told the general lines only. They had thought that the Minister President would comply with their request, and had felt much regret at his not speaking in the desired sense. However, the Ministers of State had a joint responsibility with the Minister President in respect of their administration, and the House would

be satisfied with their explanations. He would therefore ask Ministers to make speeches for which they should hold themselves responsible, and if any point in the speeches were found incomprehensible the House would trouble the Ministers to answer such questions as might be put to them. Count Oyama, Minister of State for War, then ascended the rostrum and spoke as follows:—"Mr. President and Gentlemen—Certain enquiries having been addressed to the Minister President of State by Mr. Arai Shogo and 32 members, I propose to answer that portion of the interrogations which applies to the Army. The Minister of State for the Navy will reply on behalf of that Department. In respect of the military equipment of this Empire, its purpose is clearly understood to be defensive and self-protecting. But in carrying out that purpose it is impossible to rely upon one policy only. Until we are confronted by an emergency and called upon to obey the exigencies of the moment it is not within our power to decide whether offensive or defensive strategy ought to be adopted. The Army and the Navy, like the wheels of a carriage or the wings of a bird, cannot be mutually independent. Neither can one be regarded as the principal, the other as the auxiliary. Having regard to the present condition of the country, I believe that the system of organization now enforced in the Army represents the most suitable military policy. The completion of that system is now a question of a short time, but the manufacture of naval weapons of defence and the military survey of the country, works of great magnitude, are still only half accomplished. It is the earnest hope of the Department over which I have the honour to preside, that with your approval, gentlemen, these works may be gradually accomplished in so far as the resources of the country permit." Viscount Kabayama, Minister of State for the Navy, next addressed the House. He said:—"Gentlemen—Mr. Arai and thirty-two other members addressed certain interrogations to the Government on the 9th instant. First on the list was a question about the object of the country's military equipment. As the Minister of War has just told you, the purpose of both branches of the service is defensive, and in carrying out that purpose it is recognised that we must be guided by circumstances as they arise. It is unnecessary to say that the chief aim of our military defences is to secure the peace and prosperity of the empire. With regard to the question whether the Army or the Navy is the principal arm, no decision can be pronounced. Sometimes the Army may play the chief rôle; sometimes the Navy, and sometimes both have equal functions to discharge. Now the one branch will be the principal, now the other, and as the Minister for War has told you, the same policy must be observed with respect to each. Coming to your last enquiry, however,—whether it is intended to increase the Army or the Navy—I reply that, according to my view, the Navy must be increased. The Government entertains the same opinion. Doubtless you are well aware, gentlemen, that apart from the Navy's indispensability in time of war, the duty devolving on it in time of peace is far from light. The protection of the country's commerce and sea fisheries, and the task of succouring vessels in distress are among the functions that the Navy has to discharge. Considered from the point of view of the relative duties of the two services, I think you will all agree that the progress of the Navy development has been slow. It is my earnest desire that, in so far as the resources of this empire permit, the Navy may be increased in the future. I think that I have now given general replies to the three interrogations addressed to me. But I take the opportunity of adding a word with reference to this increase of which I have spoken. Looking carefully at the state of our domestic and foreign affairs to-day, the strength of the Navy appears exceedingly insignificant. To establish a due balance of comparative strength between the naval force of this Empire and those of foreign States, the Navy must be raised to one hundred and twenty thousand tons. Otherwise I believe that the

security of our country cannot be guaranteed. To bring the Navy to this strength, twenty-five new ships of war are needed, apart from those already in course of construction at home and abroad. Ships are perishable commodities. If you add yearly to the number of your men-of-war, you add also to the number of vessels that yearly need repairs or become unserviceable. You are aware that in the Budget for next year an appropriation is made for the building of ships, but that will not bring our naval forces even to the threshold of the tonnage which, in my opinion, is indispensable. We shall not be far wrong if we regard the appropriation simply as a means of supplying the deficiencies that now arise owing to wear and tear or casualties. In asking you to vote the sum of five million two hundred and ten thousand yen appropriated in the Budget, we are not asking you to increase the Navy, but merely to avert its decrease. The building of new ships is the most important item of naval affairs, but if you increase the number of your vessels, you must proportionately increase your naval stations. Next year's Budget provides for the carrying out of certain works at Kure and Saseho, involving a considerable expenditure. Similar works must be undertaken at the naval stations of Maizuru and Muroran. In connection with these various works conning stations are needed. I ought to explain, perhaps, that when I speak of conning stations, I refer to towers of observation constructed in the vicinity of lighthouses, intended for purposes of protecting life, for meteorological observations, and for rendering assistance to vessels in distress, in time of peace; and for observing the movements of the enemy and conveying information of them in time of war. On account of these works, however, no very large sum is required. For the rest we need gun-cotton to use in torpedoes, and this cannot be made in Japan, we have to purchase it abroad; an uneconomical proceeding, to remedy which steps must be taken as our naval force increases. Again, so small is our strength at present that the Navy does not possess even one transport vessel, and it was consequently necessary in the past to make an agreement with the Kyodo Unyu Kaisha, at the time of its establishment, that it should supplement the wants of the Navy; an agreement in pursuance of which, as you are doubtless aware, a certain subsidy is now granted by the Government to the Japan Mail Steamship Company. You may possibly think that these various measures suffice to bring the Navy to a satisfactory state, but, so far as I am concerned, my warm hope is to see the naval forces of the empire increased to seventy-five ships, with a tonnage of a hundred and twenty thousand tons. With such a force at the country's command, we should be able to make our own choice between a defensive and an offensive policy. The resources of the country to-day do not permit us to adopt this limit at once: it is an achievement for the future. I hope that a period of seven years will suffice for its attainment, and indeed I should like to have provision made for it in next year's Budget. But, as you know, the import of rice this year has been large, the money market is greatly disturbed, and the people have suffered heavy losses from storms and floods. Out of consideration for the state of the nation, a sum of some five millions only has been included in the Budget for next year, but to limit our work to that amount is much against my wish. It is not permissible to make an immediate appropriation in pursuance of this plan of raising the Navy, in the course of six or seven years, to the strength I have indicated, but I beg you, gentlemen, to take the matter into your consideration and to spare no effort towards carrying out the scheme. If we have that force, the balance of strength to which I alluded just now will be tolerably established, and the functions devolving upon the Navy can be discharged. I do not hesitate to tell you that the Navy is thus insufficient. Those to whom the various duties of the service are entrusted will not shrink from laying down their lives in behalf of their country and their homes. That

is only as it should be. But I have grave doubts whether they can achieve their purpose. If the Navy is destroyed, the Army still remains to protect the forty millions of our countrymen against mischance. Yet how if it chanced that a shell from one of those huge hundred-ton guns ranging ten thousand metres, with which the navies of foreign countries are now supplied, burst above this House of Parliament? Would it be possible for us, your protectors, to escape the responsibility incurred on that day towards the Sovereign above and his forty million subjects below? I pray you, gentlemen, to enter into the feelings of us who are charged with the duty of defending you, and to aid us in developing the naval forces to the limit of the nation's ability. If, as I hope, you approve of the appropriation in next year's Budget for the building of two cruisers and three torpedo boats, and if we are enabled to raise the tonnage of the Navy to a hundred and twenty thousand tons in the course of the next six or seven years, the defence of the country will be for the first time in a satisfactory condition. I have taken the opportunity afforded by the last of Mr. Arai Shogo's questions to lay before you the scope and spirit of the policy I entertain in respect of the Navy. I earnestly hope that for the sake of the country's future, you will give the fullest consideration to the subject of the Navy, and enable us to carry out such measures as shall maintain the peace and security of the empire. I have to apologize for speaking at such a length." Mr. Yoshikawa, Minister of State for Education, finally spoke. He said: Gentlemen—Mr. Arai and thirty-two other members of the House, presented to the Government, on the 9th inst., a document asking about the tendency of the educational system, and whether high-class education or ordinary education is made the principal aim of that system. I therefore attend to-day, and will trouble you with a brief explanation of the Government's educational policy. It is unnecessary for me to undertake here any special demonstration of the fact that education is all-essential to the country, and that it must not be neglected even for a single hour. The purpose of the ordinary education provided for children from the time when they become capable of receiving it, is to improve their morals, to develop their intellectual faculties, and to teach them such sciences and arts as are necessary for self-support. This is the foundation of a nation's tranquility and the source of its prosperity. The Government, therefore, ever since the Restoration, has made education a daily care, and has sought to extend its benefits as widely as possible to children throughout the country. Such will be its object in the future also, and no less will be the industry with which it pursues that object. Ordinary education of this nature being the general aim, provision has also to be made for the wants of students who advance to the higher standard. Constitutional government has now been established in Japan, and a share in the legislative function has been given to the people. The duties devolving on individuals are thus rapidly increasing, and the growth of industries has received large development. What sort of men are they who will know how to make use of the opportunities thus placed within their reach, and who will be competent to discharge those legislative duties as well as to devise plans for the prosperity of the people? I believe that they will be men who have received a medium education, and I think that the Government policy henceforth will be to provide additional means for obtaining such an education. That ordinary education is of the greatest importance, and must not be for a moment neglected, you will doubtless be agreed from what I have already said. But high-class education is no less essential from a national point of view, as a means of promoting science and art and developing special capacities. The Empire's foreign relations are daily extending and society is daily feeling new wants; at such a time it is all important that measures should be taken to assist the progress of the country and promote its prosperity by fostering the people's talents and adding to their ability so that the nation's status

may be raised and such accomplishments developed as are likely to increase its wealth and strength. Middle-class education is the means of achieving this. The Government, regarding high-class education as no less essential than ordinary education, is resolved to take steps for the increased provision of both. Ordinary education and high-class education having an equally important bearing on national affairs, the Government makes no distinction between them, and shows no preference for one above the other. Such has been the spirit of its policy since the Restoration. I trust that this explanation will prove satisfactory to Mr. Arai Shogo and the other members." Mr. Arai Shogo then asked a few questions with regard to the speeches of the Ministers for War and the Navy, and was briefly answered by the Ministers, who did little more than repeat a part of their previous speeches. It was then half-past two. The President announced that the debate should be resumed on the motion for postponing the operation of the Commercial Code. Mr. Iyenaga Yoshihiko made a speech opposing the motion. Mr. Suyematsu Kencho said in support of the motion that in regard to the question whether the Commercial Code ought to be enforced at the same time with the Civil Code, the construction of the First Article of the Civil Code had been much discussed, but he considered that the words "Civil law" mentioned there, meant the Civil Code and not the Civil law now in use, inasmuch as certain provisions in the Commercial Code, such as those relating to the common property of husband and wife, referred to matters having no existence in the present Civil law. The new Commercial Code was not suited to the condition of the people. He quoted as instances of its unsuitability the method of keeping books prescribed in the third part, which he declared to be quite inappropriate in the case of merchants in general. He further criticized the phraseology, and pointed out several questionable provisions in the Code. He concluded by saying that the postponement was essential in order to make the necessary amendments. Mr. Takanashi Tetsuhiro was opposed to the motion. He said that the principal points raised against the enforcement of the Commercial Code were, first the necessity of the Commercial Code being enforced simultaneously with the Civil Code, secondly that sufficient time was not given to the people to study the Code, and thirdly that the Code was in opposition to the customs of this country. The first point, he thought, was groundless. A special code could be enforced independently of other codes. Such had been the case in respect of the Penal Code. Put into force independently it had never caused any serious inconvenience. As for saying that there was no civil law in force, the assertion was almost ridiculous. Secondly, he contended that it was extravagant to look for any clear understanding of the Code by the public at large. Such a prospect could never be realized. It was now the age of division of labour, and the subtle provisions of law should be left to the decipherment of specialists. It sufficed for the general people to know the outlines. He further claimed that should it be considered necessary for the general public to master the Code fully, no amount of time allowed for the investigation would suffice. The brief postponement contemplated was useless for such an object. Thirdly, the contention that the Code conflicted with established customs was, if true, the only ground worthy of consideration. If the supporters of the motion had plainly indicated the points of conflict he should willingly side with them. But they had not done so. They had simply criticised the Code in a cursory manner. In short, they had not sufficiently proved their assertions. Mr. Suyematsu indeed had referred to the non-existence of the system of common property between husband and wife, but he was strangely mistaken in that idea, for although no such expression as "common property" was in use, the fact itself certainly did exist. The speaker dwelt on the objections raised by Mr. Suyematsu and refuted

them. He concluded by saying that the demoralized and corrupt state of commercial circles was greatly to be lamented, and could only be remedied by the speedy enforcement of the Commercial Code. Several speeches followed, and the House finally divided on the motion, 189 voting for it and 67 against. The second reading of the Bill was then proceeded with.

DECEMBER 17TH.

The House assembled at 1.15 p.m. Mr. Arai Shogo asked permission to say a few words with reference to the speech which the Minister of State for Foreign Affairs was about to deliver. The purpose of his remarks was to define the points concerning which he, and the thirty-four members who had supported him in preferring that interrogations, desired to have information. He alluded at some length to the exceedingly difficult nature of the problem of Treaty Revision. For years the statesmen of Japan had devoted their best energies to its solution. Time after time a settlement had seemed to be in sight, and time after time the nation had been disappointed. He believed that the true cause of these repeated mishaps was the Government's failure to work in concert with public opinion. The people had never been taken into the confidence of the negotiators, and thus the latter had not only lacked the support of national endorsement, but had even found themselves opposed by those who should have been their chief supporters. He was aware that various reasons were adduced in support of the theory that secrecy must be preserved in diplomatic affairs, but he failed to appreciate the force of those reasons. He asked the Government to consult the people frankly and to work in concert with the nation at large. To that end he hoped that the Minister of State for Foreign Affairs would tell the House clearly in what position the question of tariff autonomy stood; whether judicial autonomy was to be recovered simultaneously with the opening of the country to foreign residence and trade; whether, if the country were opened, foreigners would be permitted to own real estate; and, in short, to give full information about all the vital points of the problem. Viscount Aoki then ascended the rostrum, and spoke at great length, his speech lasting an hour and forty minutes. He gave a careful *resumé* of the manner in which Japan's treaties with foreign Powers had been concluded, and the circumstances that had led to their obnoxious provisions. He also entered at length into the story of Japan's endeavours to effect revision, and explained the urgent necessity for accomplishing it. But he declined to enter into a detailed account of the negotiations now in progress, on the grounds, first, that the Treaty-making power was an Imperial prerogative in which the Diet did not share, and secondly, that he was bound, *vis-à-vis* Western Governments who were parties to the negotiations, to preserve towards his own countrymen the silence which they had pledged themselves to preserve towards theirs. One or two questions having been put by members and answered by the Minister, a desultory discussion ensued, in the course of which Viscount Aoki withdrew. The House discovering that he was no longer present, several members commented severely on his withdrawal while questions remained to be asked, and it was finally decided by vote that he should be invited to attend again on the following day. A motion was then made and carried to postpone other business until the Treaty Revision discussion had been concluded, and the House rose at 5.30 p.m.

DECEMBER 18TH.

The House of Representatives met at 1.15 p.m. on the 18th inst. Much interest was felt in the proceedings as the House had voted on the preceding evening that the reply given by the Minister of State for Foreign Affairs to the interrogation of Mr. Arai was, in the opinion of the members insufficient, and had instructed the President to convey that resolution to the Minister, accompanying it by a request that his Excellency would attend again and answer questions put to him. It was doubtful whether in taking this action the House had fully con-

sidered the situation, for though the Laws accompanying the Constitution provide a means for obtaining information from the Ministers of State in person, or, failing information, an explanation of the reasons for withholding it, they do not invest the House with any authority to keep a Minister under cross-examination after he has replied to their original queries, and still less do they warrant the address of a summons to a Minister in the name of the House. There was little difficulty, therefore, in foreseeing that Viscount Aoki would refuse to comply with the intimation given to him, but what people were curious to learn was the course that the House would take under the circumstances. The President being indisposed, the Vice-President, Mr. Tsuda, took the chair, and immediately read to the House a reply received from the Minister of State for Foreign Affairs, to the effect that he regretted his inability to comply with the House's request, inasmuch as, in his speech the preceding day, he had given the fullest information permitted by his position, and had answered the queries of Mr. Arai and the other members with as little reserve as possible. The House at first seemed unprepared to deal with this phase of the situation, though undoubtedly it must have been foreseen. Several members expressed dissatisfaction in general terms, but no definite proposal was made until Mr. Arai Shogo ascended the rostrum, and moved that as the Minister of State for Foreign Affairs had failed to give satisfactory replies to the interrogations addressed to him by over thirty members, in due accordance with the provisions of Parliamentary law, and as, further, he had disregarded the request of the House, conveyed through its President, that he would attend again and give fuller information, a representation should now be made to the Government setting forth these facts, and desiring that the Minister for Foreign Affairs should be directed to comply with the House's desire. Mr. Arai spoke at some length and with all his usual fluency. He pointed out that long as the Minister's speech had been, it had contained no really full information about the points of inquiry, and he insisted that as these points had been submitted in due form, and as the Minister President had directed Viscount Aoki to answer them, the House had an undoubted right to expect that the Minister of Foreign Affairs would remain in his place until the projected investigation was completed to the content of the House. He urged the necessity of vindicating the importance of the Diet, and not suffering its wishes to be slighted by any official. Mr. Misaki proposed as an amendment that instead of attempting to secure the attendance of the Minister in connection with the series of questions submitted on the 9th instant, the House should proceed by the route clearly indicated in the Laws, namely, should formulate anew any queries it desired to have answered, and having affixed to them the necessary number of names should address them to the Minister President of State, leaving him to determine the vehicle of reply. Mr. Misaki said that while the House had an undoubted right to formulate questions and to expect that a Minister of State should either answer them or give sufficient reasons for refusing to do so, it had no right, so far as its Laws or Rules indicated, to require the renewed attendance of a Minister after he had replied to its questions and left its precincts. It was true that the speech of the Minister of State for Foreign Affairs had not contained information so full as the House desired, but it had probably contained as much as the Minister was at liberty to convey in connection with the questions originally addressed to him. It was not advisable, under such circumstances, to set up needless friction between the House and the Administration. A plain and simple course was open, namely, to draw up a more detailed series of interrogations, and submit them in the regular way. This proposal evidently pleased the House much better than the headstrong method advocated by Mr. Arai Shogo. But at first considerable discussion took place. Several members spoke, the majority in favour of Mr.

Misaki's motion. It was forcibly pointed out that although Viscount Aoki's speech had been lacking in, detailed information, there had evidently been no groundless wish on the Minister's part to keep the House in ignorance, and moreover the speech had contained much that ought to give great satisfaction to the members. The Minister had explained, for example, that the Constitution could not possibly be carried out while the present Treaties remained in force, and from that it might be distinctly inferred that the Government was resolved to spare no effort to recover the nation's tariff and judicial autonomy. He had also stated and re-stated, most emphatically, that the Government considered it an imperative duty to revise the Treaties, and that the country had an indisputable right to demand their revision. He had not told them what course was contemplated with regard to the ownership of real estate by foreigners, or with regard to the coasting trade; but he had promised that every method should be employed to bring about an arrangement satisfactory to the people in these respects. Mr. Arai and his supporters, seeing that the House was drifting away from them, now endeavoured to re-enlist its sympathies by reminding it of the resolution voted the preceding evening, and asking the members whether they intended to treat that resolution as a thing of no value twenty-four hours after it had been recorded in the annals of the House. They had voted that the Minister for Foreign Affairs should be invited to attend again in the House in order to answer questions raised by the members in connection with his speech, the information already given by him being considered insufficient, and they would be stultifying themselves if they now bowed tamely to the Minister's refusal to comply with their request, and suffered the incident to rest there. The other side replied to this by asserting that the course suggested by Mr. Misaki was not inconsistent with the vote of the preceding evening, but was in fact the natural consequence of that vote. The House had voted that it required fuller information, and had attempted to procure that information in direct sequel to the interrogatories of the 9th instant. It had, however, been found impossible to accomplish this without undue efforts, and the House accordingly reverted to the regular course indicated in the Law. The Vice-President, in response to a generally applauded motion that the debate be closed, announced that Mr. Misaki's motion having obtained the necessary number of supporters, should be put to the House, but that Mr. Arai's motion had failed to receive the necessary support. Just as the motion was about to be put, however, a member rose and called the Vice-President's attention to the fact that Mr. Misaki had made not a motion, but an amendment to Mr. Arai's motion, and since the latter had not obtained the prescribed support and could not be submitted to the House, it seemed entirely out of order to take a vote on the amendment. The Vice-President thereupon asked the House to decide this point, and called upon those to rise who thought that Mr. Misaki's motion should be put to the vote. Only five or six members out of the number stood up in response to this summons, and the Vice-President accordingly announced that neither the motion of Mr. Arai nor that of Mr. Misaki was any longer before the House. He therefore ruled that the House should proceed to the Orders of the Day, and the House, evidently quite content to close the incident, set itself quietly to consider the other Bills before it. Mr. Arai Shogo and the little band of agitators who follow his banner thus suffered a signal defeat.

"LE JAPON."

The new French journal, which is to make its regular appearance on and after the 1st of January, has taken the very practical step of issuing a specimen copy. It is a small paper—just one half of the size of the *Japan Mail* and two-thirds of the size of the other local English journals—yet its rate of subscription is \$24 annually. This is certainly an immense price,

and that it should be necessary to make such a charge suggests a very strong doubt as to the permanent vitality of the new journal. We cannot but remember that two French newspapers have already figured in the list of Yokohama publications and died of inanition, and while we wish every success to the new venture, we are puzzled to conceive why its prospects should be brighter than were those of either of its predecessors. However, that is a matter for the proprietors alone to consider, and doubtless it has received their full attention. *Le Japon* is the property of the Yokohama Printing and Publishing Company (Limited), an association called into existence by the events of the past half year in connection with Treaty Revision. It has consequently an influential and opulent backing. The specimen number is necessarily a simple statement of intentions—a very moderate statement, too, justifying the expectations which we have already expressed with reference to journals published under the auspices of the new Company. In respect of politics *Le Japon*, announcing itself as the "organ of the French colony," promises to sustain the interests of the colonists and to "exert itself to contribute to the realization of the wishes recently evinced by them." That is a very commendable purpose, no doubt, but we cannot help thinking that these latter-day champions have entered the lists a little too tardily. The battle is practically over. No fighting that can be done at this end of the line will influence the situation materially, except in the sense of still further exciting the Japanese. The anti-revision rôle is obsolete. The mutterings and grumbings heard from the cave of the little band of Adullamites who still try to forget that time passes, and that the world moves, have a melancholy, antiquated sound well suited to the moribund cause they represent. The *Japon*, of course, is not to be anti-revisionist. Its proprietors have protested against being described by any such epithet, assuring the public that they are essentially pro-revisionists, and that they hesitate only over the question of terms. Therefore we say that the new journalistic campaign is commenced too late. The question of terms has been under international discussion for ten years, and the margin of compromise has been narrowed until it affords standing room for statesmanship only, and none whatever for suspicion and prejudice. Every strong effort made after the manner of last September's meeting, can only narrow that margin still further. We imagine that the projectors of the re-juvenated *Japan Gazette* and of *Le Japon* appreciate this, and that instead of throwing down any fresh gage of defiance to Japan, the newspapers under their control will help to smooth away difficulties and to promote a mutually satisfactory settlement of a question which, all reasonable persons are agreed, must be settled somehow without much longer delay. Still, it is late for such an effort. The fight is practically fought.

CHINA.

THE *Kokumin Shimbun* records some statements with reference to China, obtained by interviewing a Japanese who lived for a time in that country, and who is said to be competent to express an opinion on the subject:—"As to Chinese customs I brought with me several illustrations designed to indicate their leading features, but having given most of these pictures to my friends, I have only a few to show you," said he, handing me three pictures. The first showed a room used by the higher classes for smoking opium, with a man and woman lying in it smoking; the second was a representation of a nobleman going in a litter, and the third a drawing of a one-wheeled cart like a *jinrikisha*, and two men riding on it, pushed by a coolie. Looking at these, anyone could easily imagine how slowly things move in China, and how leisurely are the habits of the people. Then he referred to opium smoking. The poison of opium, he said, has already entered so deeply into every part of the vast empire of China that no law or punishment of whatever nature seems to be able to eradicate it. Many statesmen are apparently endeavouring to

get the virus out of the country, but they themselves are smokers. Only the famous Chang Chi-tung, who is a man of strict principles, never smokes, and is most earnestly engaged in trying to check the further extension of the evil habit. But his efforts are almost fruitless. If the Government put a prohibitory tax on imported opium, the people could cultivate the plant themselves to such an extent as to satisfy their own requirements, and thus defeat the purpose of the Government measure. It is not on account of any peculiar taste that opium is so much liked by smokers, nor is it on account of its affording such a pleasurable sensation during intoxication as many Japanese imagine. The true reason of its use is its stimulant power acting as an excitant. Politicians before going to a discussion, professors before delivering a lecture, merchants before opening negotiations, resort to the stimulating drug, and having once appreciated its effects, cannot give it up and become more and more its slaves. For these reasons, it is as much valued in private as it is denounced in public. High and low, the people all use it. It is an important means of social intercourse among the better classes, and an opium smoking room is considered indispensable in the houses of ministers, landed gentlemen, scholars, merchants, and so forth, who have any claim to be hospitable or to treat honoured guests properly. Under such circumstances it is natural that the use of opium cannot be checked in China."

Passing on to speak of Chinese characteristics, the traveller said:—"The Chinese are often regarded as conservative, obstinate, avaricious, and greedy, but that is only true as applied to a portion of them. In such an old nation as China, where officialdom is so highly esteemed and the people are so indifferently treated, the disparity between the poor and the rich cannot but be great. The poorer classes have no choice but to go wherever work may be found, there to toil with a degree of penuriousness that suggests avarice, and of industry that implies greed. But if we look at the condition of wealthy Chinese, we find a very opposite state of affairs. There being no such thing as a middle class, the members of the higher class are generally very wealthy and extravagant in their manner of living. They have ample means to satisfy their desires, and they are not at all given to grudge expenditure. Restrained by the administrative policy and social customs observed in their country for so many centuries, they do not suddenly adopt the externals of Western civilization. But this is only outwardly so: privately they are disposed to abandon their old ways of life. Thus, in respect of ornaments for head, neck, hands, and so forth, imported goods are more and more coming into use, the most conspicuous of such adornments being made into forms dictated by national fashion so as to escape attention. In fact, the adoption of Western civilization in Japan began with the Government, and therefore its roots do not strike so deep. But the reform in China is destined to commence in society, and therefore so soon as it has really commenced, it will go on without interruption. Japanese merchants projecting, or engaged in, trade with China, should closely watch the changes impending for China and the Chinese."

Of the foreigners engaged in trade with China, the English assuredly exercise the greatest influence. Indeed it seems quite natural that the English should wield most influence in the China trade, for it was England that first opened that trade; but if we look a little closer, we find that the real cause lies in the earnestness and energy with which the English Government and people promote and encourage commerce with China. The English Government delegates to the Hongkong Government all affairs connected with the trade with China, and the Hongkong Government causes the various Consuls to work along with English merchants for the furtherance of their common object. They take all means to win the good will of the Chinese

officials and merchants, and go into various undertakings, as the establishment of banks, of shipbuilding yards, railway construction, and various other industries in conjunction with the Chinese, either on an agreement for sharing profits, or on the principle of contributing towards capital or labour; and they thus endeavour to obtain commercial influence by convincing the Chinese that the English people are trustworthy and impartial partners in business. In starting any new undertaking the manner in which the English Consuls cultivate the Chinese officials and the English merchants win over the Chinese merchants fills the bystanders with admiration for their cleverness and industry. They employ all the tact acquired in dealing with other civilized nations in transacting business with the less civilized and less experienced Celestials, and leave no means untried to attain their objects, whether of pleading, intimidating, persuading, recommending, bribing, or cheating. They inevitably succeed in what they attempt, and thus gain ground inch by inch. Germany is a new comer in the commercial field as compared with England, but the Germans often surprise the English by their employment of effective and adequate means in dealing with the Chinese. The English resort to the expedient of entering into partnership with the Chinese, but the Germans effect their purpose by gaining over the Chinese through interest. The German Government deals directly with the Chinese Government and, gaining over the influential members of the latter, recommends and supplies competent Germans when any changes in military or naval systems, &c., are made by the Chinese Government, or through the hands of interested officials cause German timber or other articles to be bought by the Chinese merchants. In short, while England tries to bind the hands and feet of China, Germany attempts to make use of her head, and they are doing their best to overcome each other in the combat."

But another party aims at competing with these two peoples for the coveted object. That is Japan. Before going into this subject, we should make some observations as to the foreign trade of Japan. Hitherto the Japanese have depended on tea and silk to maintain an equilibrium in their annual exports and imports. The Japanese tea trade has been gradually declining and has become so dull lately that a Government subsidy has been obtained for establishing the Japan Tea Manufacturing Company (Nippon Seicha Kwaisha), but even this does not seem to effect much, so that the tea trade of Japan will in all likelihood give place to the Indian tea trade. Almost a similar fate seems about to befall the silk trade. Japanese silk has also its competitors, but owing to the failure of the industry in Italy or to a similar result in America, the trade here for some time prospered. This however, was but temporary, and depression having set in the trade gradually came to present the miserable aspect of the present year. In fact, the tea and silk trades of Japan are subject to annual fluctuations, and show a general and gradual decrease in annual export. Consequently they cannot be taken as permanent and representative products of this country. On the other hand, if we look at the state of our trade in marine products we see that this branch of trade shows a steady and remarkable increase in the export to China, and are convinced that it will eventually take the place of tea and silk as staple products of this country. Our marine products have no rival. Their supply is inexhaustible, and the demand from China is also limitless, but it is vain to hope for their production in the barren seas of China. The Chinese cannot do without our marine products, but so far the supply only extends to a small portion of the vast Celestial empire. We do not go beyond the mark in saying that our trade in marine products with China means an inexhaustible supply and a boundless demand. We must add to this the export of goods produced by handicraft, such as matches, soap, &c. Our countrymen's skill in handicraft is so far above that of the Chinese that there can

be no fear of competition in that respect. The Germans are endeavouring to introduce their home-made matches into the Chinese market, but here we have a great advantage over them in respect of our natural position. We can always make a better article at less cost, and it may be asserted that if we persist in endeavouring to develop our trade in these goods with China, we will succeed in monopolizing the Chinese market. There are numerous sources of wealth yet undeveloped in the interior of China. The Chinese have not yet gained any profit from their mines, and shrewd Englishmen have already begun to work them. In China the soil is comparatively poor, but it is good enough for the cultivation of the cotton plant. The Chinese have hitherto pursued this industry to a certain extent, but their efforts are confined to only a small portion of the waste tracts, and produce a limited quantity. This industry properly managed would be an important undertaking. Again, the transport business on the famous river Yangtze is so great that eighteen large ships, owned by three companies, running constantly on its waters, are scarcely enough to carry the goods that are heaped up in the warehouses. If such a powerful company as the Mitsu Bishi Kwaisha were to secure the necessary vessels and piers, &c., and enter the field of competition, the results could not fail to prove profitable. In short, China is a country with which we must be closely related in trade and industries, and we ask those who are interested in these matters to direct their attention to the quarter we have indicated."

THE COST OF STEEL RAILS.

ACCORDING to the new American Tariff Bill, says *Industries* of October 10th, it is proposed to reduce the duty on steel rails from \$17 per ton to \$13.44. It is of interest, therefore, to note that in a report recently published by the Administration of the United States, the maximum difference in the cost of producing steel rails is only three dollars per ton in favour of Europe. The official summary showing the average cost of a ton of steel rails is as follows:—

	United States. Dollars.	Great Britain. Dollars.	Continent. Dollars.
Material	21.209	18.588	18.101
Labour	1.540	2.548	2.689
Officials	—	0.049	1.376
Fuel	1.000	0.571	0.170
Supplies and repairs	1.000	0.675	0.552
Taxes	0.050	0.006	—
Total	24.799	21.907	23.190

In the American estimate the salaries of officials and clerks are included with supplies and repairs.

JAPANESE CHRISTIANITY.

We have from time to time endeavoured to familiarize our readers with the opinions of the so-called new school of theology in Japan, whose primary object seems to be the harmonizing of Christian teachings with the peculiarities of the Japanese national genius. In the last number of the *Rikugo Zasshi*, we find an interesting article on this subject by Mr. H. Onishi, a prominent thinker of the rising generation among Japanese Christians. Mr. Onishi does not agree with those who think that the Japanese Christian world in general is agitated by the new ideas of winnowing and adaptation, but he holds it to be a fact beyond any manner of doubt that such ideas are fermenting among a certain section of the Christian community. The origin of the new tendency is ascribed by some persons to the influence of the recently introduced creed of Unitarianism. This assertion, however, is pronounced entirely erroneous by Mr. Onishi, for the new school of theology began to appear several years ago. "Those," continues the writer, "who are now advocating the so-called new doctrines are men who long since began to watch with interest the progress of modern theological tendencies in Europe and America. . . . Is it more correct to say that, in certain respects, these men, in common with Unitarians, are under the influence of the new ideas of Europe and America, than that they have been swayed directly by the Unitarian theology lately introduced into this

country. This is a plain fact, which nobody acquainted with the past history of Christianity in Japan can fail to recognize." Mr. Onishi then goes on to observe that, besides the above mentioned school of thinkers in the orthodox church, there are in Japan two bodies which profess new religious opinions, the Unitarians and the German school of progressive Christians. The two latter already possess a visible organization, but the first has not yet assumed definite shape, and its ideas have still to be reduced to the form of a creed. The German school and the Unitarians have their own religious organs, namely the *Shinri* (Truth) and the *Unitarian*. The adherents of the new school among Orthodox Christians ventilate their opinions through the columns of the *Rikugo Zasshi*, but that journal cannot by any means be considered their organ. It may be stated, however, in behalf of this school, Mr. Onishi continues, that while most of the principal articles in the *Shinri* and the *Unitarian* are written by foreigners, the opinions advanced by the supporters of the national movement emanate entirely from Japanese. The writer then passes on to note that two cardinal motives inspire the modern tendency among Orthodox Christians; first, to strike out a new phase of Christian theology; and secondly, to promote the religious development of the Japanese race along a special and independent path. "Anybody," says Mr. Onishi, "who proposes to take a new departure in religious matters naturally thinks of adopting a line suited to the genius of his nation; and when a man desires to adopt such a course, he becomes inevitably dissatisfied with the Orthodox theology brought from the Occident and wishes to strike out an independent path of progress." As to the points of difference between the new school and the ordinary Orthodox believers, the writer says:—"It is evident that the new school maintains, on several points, opinions which are at variance with the creed of ordinary orthodox believers. In the doctrines of the Trinity, for instance, of Redemption, and of Inspiration, there is an undisguisable difference of opinion between the two parties. * * * In short, men of the new school make it their object to do away with the antiquated theology, and at the same time to preserve the vital force of religious belief. How to solve this difficult problem, is the point engaging their serious attention. They do not insist upon disavowing the supernatural elements of Christianity—miracles for example; neither do they attach paramount importance to the belief in such elements as articles of faith. They give greater weight to good conduct in practice than to belief in theological dogmas." With reference to the origin of the nationalistic movement among Japanese Christians, Mr. Onishi thinks that it is erroneous to identify it with the conservative reaction represented by the *Kokusui Hosen-to*. He maintains that the true explanation is to be found in the general awakening during recent years of the national consciousness, as a natural consequence of the progress and development of the Japanese people during the last two decades. In conclusion, he declares himself in favour of the new movement in question, "because the destiny of Christianity in Japan, at least in so far as concerns the educated section of the nation, is bound up with the future of this recent tendency." Should the Orthodox church be foolish enough to disown the new school, nothing could be more deplorable for the sake of the future position of Christianity in this country. Should, on the other hand, that church be ultimately superseded by the new school, its decline will not be matter for regret." Certainly it is a conjuncture of immense interest.

THE BUDGET.

It would appear from a statement in the *Mainichi Shimbun* that the Committee on Finance in the House of Representatives is unable to come to any satisfactory conclusion with regard to the Budget. Knowing persons predicted that despite the large measures of retrenchment which figured in the programmes of the various

political parties, very little could be accomplished when the practical means of carrying out these projects came to be discussed. This prophesy appears to be on the eve of fulfilment. The *Mainichi* says that the representatives of the various political parties in the Finance Committee all advanced their own special views, and declined to strike out a common scheme. The *Taisei-kai* had a *Taisei-kai* plan; the *Kaishin-to* folks had their own hobby, and the *Yifu-to* were bent upon pushing another special device. The result is that the only point of agreement yet discovered is said to be the abolition of the Metropolitan Police Bureau, which is now on an independent basis. Presumably what is contemplated is the attachment of the Bureau to the Home Department. This step would doubtless lead to a certain reduction in the number of officials, but it would be a paltry measure at best. We do not envy the Committee its task. The country constituencies are of course incompetent to form any clear opinion about the possibilities of effecting financial retrenchment on a large scale. They have, however, returned their members in the belief that retrenchment is to be among the very first feats achieved by the Diet, and that it will be retrenchment of sensible proportions. The members, on the other hand, when they come to face the problem in earnest, find that financiers, at least as clever as themselves and far more skilled, have for years been vainly trying to effect the very reforms which they have pledged themselves to their constituents to accomplish. They find, too, that what is true of an ordinary household is equally true of a nation; each must live up to its station. Japan cannot disband her troops, lay up her ships, close a number of her Government offices and become semi-*inkyo*. She has to pursue precisely the opposite path, and the trouble with the Committee on the Budget is that while this patriotism prompts them to one course, their supposed responsibility to their constituents dictates another. It is a very old story. The *Mainichi* suggests that the issue will be a fight over the 67th Article of the Constitution, which, according to the Government's rendering, so curtails the sphere of the Diet's financial control, that its capacities of retrenchment are practically inconsiderable.

THE NEW YORK CHAMBER OF COMMERCE.

THE resolution passed by the New York Chamber of Commerce has fallen very flat. Even those who might have been expected to throw their caps into the air about it, maintain a discreet silence. The truth is that the good folks of the American capital have placed themselves in a somewhat comical situation. The language of their resolution betrays a blissful ignorance of the whole subject. "It is reported," they say, "that negotiations are now pending between the Government of Japan and the United States Government for the revision of existing treaties between the two nations, which contemplate, among other provisions, relinquishing extra-territorial rights now existing, by which foreigners resident in Japan are subject to the laws of their own country." It is reported that negotiations are pending! What a startling item of news has reached the ears of these commercial Rip-van-Winkles! They are evidently quite oblivious to the fact that their Government actually concluded with Japan, nearly two years ago, a revised treaty of the nature to which they objected. But they have been suddenly roused from their slumber, and induced to pass a resolution bearing all the traces of the intellectual confusion that generally attends waking moments. They talk of "extra-territorial rights," an obviously absurd formula, since foreigners possess no "rights" whatsoever in this country, but only privileges, and then they proceed to define the so-called "rights." "Foreigners resident in Japan are subject to the laws of their own country." This is the interpretation of extra-territoriality gravely and publicly advanced by the New York Chamber of Commerce. The inmates of the sleeping palace are profoundly ignorant that the most prominent and distinctive feature of their country's policy

towards Japan for the past twenty years has been recognition of the obligation incumbent on United States citizens resident here to observe and obey the laws of the country. In short, if the New York Chamber had deliberately proposed to itself the task of demonstrating its entire want of acquaintance with the subject of Treaty Revision, it could not have succeeded better than it has by voting this resolution. Its action must be taken as simply the bow of a polite but nebulous colleague to Yokohama's challenge. It is sublimely oblivious of the very rudiments of the subject. It does not even know that no one objects to Japanese laws. It has not grasped the beginning of the question, and its voice can have no manner of influence with the responsible negotiators. An international difficulty of such a character as that which Japan is seeking to deal with cannot be disposed of by the airily ignorant pronouncements of men who obviously have not taken the smallest trouble to descry even the outlines of the matter. The Japanese will naturally accept this as another example of the disposition to treat their claims with arbitrary nonchalance. They will justly say:—"If the New York Chamber of Commerce regarded its own resolution as a matter of any importance, then, before passing judgment in an international suit of such long standing and involving such important issues, it should at least have taken the trouble to learn what the case is."

MR. RUDYARD KIPLING WITH THE CRITICS.

THE story of Mr. Kipling's interview at New York with Messrs. Harper Brothers, the publishers, and their contemptuous dismissal of his now famous sketches, is going the round of the newspapers. Author and wouldn't-be publisher (who did afterwards publish), do not seem to have hit it off. Perhaps the reason may be found in the presence at headquarters of that sarcastic Ohio Bostonian, Mr. W. D. Howells. This clever novelist, as readers know, occupies the editor's study in *Harper's Monthly*, and, being a man of theory and special views in regard to the story-telling art, he is difficult to please. Lighter literature in Great Britain seems to Mr. Howells to be in a bad way—æsthetically considered, to be in a state of "effete Philistinism." Mr. Howells aired his views on this subject several years ago, and displayed a good deal of bitterness at the vogue of a school of London writers, whose art he despised. He applies the term "printing in colours" to Mr. Kipling's jaunty, hat-cocked-on-one-side, wink-tipping sketches. The whole performance seems to him to be in bad taste. We fear a change to Mr. Howells might not be a change for the better. When he leaves the airy semi-nothingnesses of the drawing-room and polite "parlour," to give us realistic touches of the saloon and the street, he scarcely keeps free of the coarse. It is an easy task to make a comic scene out of a drunkard's idiocy; but as soon as it is made comic the sketch becomes more or less disgusting. In almost every one of Mr. Howells' tales that we recall to mind, the folly of a drunken man is made the material for a comic incident. To instance three only—the would-be suicide, Hicks, in the *Lady of the Aroostook*, a pretty tale otherwise; "Bartley Hubbard" in *A Modern Instance*, and "Silas" himself in *The Rise of Silas Lapham*. In lightness of descriptive touch, in the reproduction of the airy play of drawing-room conversation, in the dissection of motive, we think Mr. Howells is surpassed by Mr. W. E. Norris; and this is his recognised forte. His comparatively clumsy attempts at realism, in the department where Mr. Kipling has scored so marked a success, show his incapacity to appreciate the latter's genius. We fail to see any essential or appreciable bad taste in Mr. Kipling's sketches. With the toning down of a few expressions, all objections would disappear. Howells is hypercritical. Many take umbrage at Mr. Kipling's excessive use of local Indian terms, which makes us often wish we had a copy of Colonel Yule's dictionary conveniently at hand. *Thampanies*, *hamals*, *khilmatsars*, *chaprassis*, and all the rest of them are apt to

bore conscientious readers. Perhaps there is something in this objection; a writer in last month's *Cornhill* makes the most of it. This writer, who revels in badinage, attributes Mr. Kipling's popularity to four causes. Firstly, he punctuates his writing so as to make his sentences read like actual conversation. Secondly, he uses mysterious terms, and the public like to be mystified. Thirdly, the public do not like good men, nor do they like bad men, but they do like the man-who-has-some-good-in-him-after-all. And such Mr. Kipling, like Dickens and like Bret Harte, is fond of depicting. Fourthly, for his subject matter he has chosen what the world never wearies of—soldiers, horses, and flirts. Mr. Julian Hawthorne, in *Zippincott*, refuses to be cynical, and goes in with the current. He compares Mr. Kipling with Bret Harte in the self-possession and sagacity of his style, and grants him the true, mellow, literary touch. He believes him to possess, like Mr. Thomas Hardy, the power of depicting femininity, his women having all the distinction of sex. And his people are real people, he gives us nothing false or artificial. Such is Mr. Julian Hawthorne's verdict, a verdict in which the American public is pretty sure to acquiesce. Mr. Howell's vinegary censures will not carry much weight. His own literary work is growing thinner and thinner in quality; his last novel was almost a failure. In classing Rider Haggard and Rudyard Kipling together, although admitting the superiority of the latter, he commits a great injustice. For Mr. Haggard's imaginative faculty is of a crude, every-day sort, to be found in any school dormitory or ship's fore-castle, a "yarning" imagination, indeed; Mr. Kipling's is of a subtle kind, found rarely more than once in a generation. What faults he has are faults of youthful mannerism not faults of taste, which go deeper. As Mr. Julian Hawthorne observes with justice, he never makes a mistake of tact—whatever he writes becomes literature by his way of putting it.

RURAL LIFE IN ABERDEENSHIRE.

We publish elsewhere the first of a series of sketches which, unless we are greatly mistaken, will be read with hearty appreciation. They bring back once more vivid memories of life in that far-off land to which our hearts cling so fondly after all these years of absence. Amid such quiet scenes as those described by the writer many a dear friend is preparing to spend the Christmas that finds us here struggling with the old problem, and toiling to acquire the means of spending our remnant of years in just such a village at this of East Aberdeen. It is good sometimes to travel back in imagination to the restful days of the mellow past, and to see again, even on paper, the places and people of our childhood; to recall "the sober comfort, all the peace that springs from the large aggregate of little things."

THE CABINET AND THE DIET.

WITH regard to the interrogations addressed by certain members of the House of Representatives to the Cabinet, the vernacular papers state that those relating to industries are not likely to receive any answer, the Minister of the Department of Agriculture and Commerce (Mr. Mutsu) holding the opinion that none should be given. The ground he takes up is said to be that matters relating to industries call for different measures according to different circumstances, and as some from their nature and relations would require treatment based on a negative principle just as others would fall to be dealt with on positive principles, it would be impracticable to determine beforehand any definite course to be pursued in dealing with industrial affairs in general. Mr. Mutsu, as we now know, has justified this prediction by declining to answer the question, but the reason assigned by him is the vagueness of the inquiry.

The Judicial Department, says the *Yomiuri*, is busily occupied with matters relating to the Diet. The three Departments of Communications, Education, and Agriculture and Commerce are at the moment enjoying a respite, as the

Houses have not yet commenced to discuss their estimates, but the Judicial Department is the object of present onslaughts. The problem of how to interpret the 53rd Article of the Constitution, and the question of Mr. Mori Tokinosuke's detention have already come up, and the questions of postponing the operation of the Commercial Law and amending the Law for the organization of Law Courts are being brought forward. Meanwhile, another important measure has made its appearance, namely, a Bill for the revision of the whole body of the Criminal Code. The Bill has been drafted by Messrs. Miyagi Kozo and Kameyama Sadayoshi, assisted by Mr. Kawatsu Suke-yuki, and has already been presented to the Cabinet, and approved of by the Ministers. So that before many days are over, it will be submitted to the Diet. As the Code contains many articles and would require at least six months to be fully and minutely investigated, the debates over this Bill in the House will be of an animated kind. Add to these the Barristers Bill, and the question of rescinding the laws as to the appointment of Judges by examination, reducing or increasing the annual expenses of the Judicial Department, &c., and we shall find that the session of the Diet this year will be almost entirely occupied with judicial questions, so that Count Yamada's anxiety may be imagined.

The postponement of the operation of the Commercial Code will, says the *Hochi Shimbun*, if agreed to, gladden alike wealthy merchants, the so called genteel class of merchants, and the members of small mercantile associations. That the Houses should contain many advocates of postponement is something we cannot understand, and still more are we surprised to be told that on the side of these are Cabinet Ministers. If the Commercial Code is considered unnecessary, the House had better conclude to rescind it; if it is imperfect, the House had better amend it; but there is no reason for resorting to such a temporising measure as postponement. If, however, it is said that the Commercial Code is necessary, and its articles unobjectionable, but that the different companies and firms now in existence are not yet prepared to observe it, we would ask them how many years do they think will be necessary for preparation. For at least ten years it has been known that the Diet would be opened in 1890, and yet the preparations for it are not complete. Would it have been different with the Commercial Law?

Numerous motions have been made and discussed in the House of Representatives, but in the House of Peers there have been so far none except those made by Messrs. Watari and Ozaki with reference to the Rules of the Diet. We are told, says the *Hochi*, that a proposition to recover tariff autonomy is about to be brought forward in the House of Peers. Mr. Tomita Teisunosuke and some others are the principal supporters of the Bill, which will be handed to the President for submission to the House. This measure, which seems to have many supporters in the House of Peers, aims at first recovering tariff autonomy and thus obtaining material benefits for the country. The customs duty at present levied in Japan is limited to 5 per cent., and cannot be altered, which fact subjects us to a heavy disadvantage. According to the report by Mr. Tomita and others to the Society of National Economy, in the articles as to trading accompanying the treaties with eight Powers concluded in the time of the Tokugawa Government, the tariff was of four classes; i.e., no duty on gold, silver, and three other articles; five per cent. on articles required on ships and other twelve articles; 35 per cent. on spirits; 20 per cent. on all other articles not specified above, and the method of levying was on the invoice prices. Ten years later an amended agreement with reference to Customs duties was entered into with the delegates of America, England, France, and Holland, by which the former system of *ad valorem* dues was abolished in favour of two methods, specific and *ad*

valorem according to the class of commodity, and the limit of five per cent. was adopted. This has been continued for twenty-five years to this day, working greatly to the damage of the national interests. For instance, if we had continued to observe the rates of the first agreement for twenty-two years the import duties received by this country would have amounted to 150,000,000 *yen* instead of the 29,000,000 *yen* actually received by our Government. If we recover our customs rights and can apply rates similar to those in force at first, our annual income may be increased by 10,000,000 *yen* at least. Such being the case we should endeavour to avoid the loss we annually suffer from. Some of the supporters of the motion are firm in their intention to push this matter to the last stage with the coöperation of the people at large.

The *Koko Shimbun* mentions, with reference to the speech to be made by Viscount Aoki in the House of Representatives on the subject of Treaty Revision, that Count Goto is said to have remarked that as the negotiations for Treaty Revision now in operation are of a more advanced nature than those dealt with by Count Okuma, even the *Kaishin-to* would not offer any opposition but would support them, and that while among the Constitutional Liberals some small section might complain, the majority would make no objection. Consequently as there will be but little opposition from without, the negotiations will in all probability meet with little obstruction.

The *Nippon* writes, in anticipation of the speech to be made by the Minister of Foreign Affairs:—"Matters connected with diplomacy are mostly kept secret, but unless they refer to a policy that cannot prudently be revealed, there is no reason why any secret should exist. Under despotic monarchies the people have no responsibility as to political affairs, and therefore the officials entrusted with such affairs keep them secret so as to avoid idle comments by irresponsible people. But this cannot apply to countries under the constitutional system, where such affairs as treaties of foreign commerce, or of navigation, the permission of mixed residence in the interior, &c., affect the responsibilities of the people, who are therefore entitled to know what concerns them. Those in charge of the Government of this country are well aware of this fact, and the Minister of Foreign Affairs has decided to address the House of Representatives on the subject of Treaty Revision. This is a noteworthy event, and shows that the Cabinet of Japan is that of a truly Constitutional Government. We were much disappointed however, by the speeches of the Minister President and the Minister of Finance. To what extent Viscount Aoki intends to express his views we do not know, but we should regret if his speech simply consisted in a recapitulation of the history of diplomatic affairs, and in expressing hopes of avoiding results similar to past failures, &c. We therefore should like to have the following questions thoroughly explained by him:—the principal points requiring revision in the Treaties; the stage to which the negotiations have been carried; his views as regards the permission of mixed residence and the abolition of the Consular Courts system; his views as to restoring our tariff autonomy; the conditions if any to be allowed to foreigners; if these matters have been already determined by the Cabinet, whether they are to be submitted to a Conference of the Treaty Powers, and whether such proposals are to be amended or to be pushed on without wavering a step in case of being objected to by the Powers; whether it has been determined to go to the extremity of declaring the present Treaties void if that is found necessary, &c. These are the points we would ask the Minister to explain, although we assuredly should not place before him questions the answers to which would necessarily disclose his diplomatic policy. Foreign commerce, navigation, and mixed residence directly concern the interests of the people, and should not be decided according to the individual views of any states-

man. We do not ask him to place the draft of the Revised Treaties before the Houses for debate, but as to those parts of the Treaties that directly concern the people, we think he should explain them to the Houses, and by ascertaining the tendency of the people's thoughts be enabled to form his own plan of decisive action."

THE BALDWIN BROTHERS AT UYENO.

A SECOND balloon ascent and parachute descent took place at Uyeno on Monday. The performers were advertised as "the Baldwin Brothers," but this phraseology was somewhat misleading, inasmuch as the elder brother's share in the proceedings appears to be limited to the measures for the inflation of the balloon, and to general superintendence. Like Mr. Spencer, the Baldwins were fortunate enough to secure the use of the excellently suitable space immediately in front of the Permanent Museum in Uyeno Park. Enclosed by the buildings which flank and face that edifice, this position enables the preparations for the ascent and the start to be entirely hidden from persons who do not pay for admission, but of course so soon as the balloon ascends above the roofs it becomes visible to everybody. Care had been taken to advertise the affair thoroughly, and the impression had been skilfully created that Spencer was only a pupil of the Baldwins, and that the performance of the latter would throw the former entirely into the shade. The consequence was that large crowds assembled in the park, and that some five thousand bought tickets at rates varying from one *sen* to ten *sen*. It was announced that the ascent should take place at 2 o'clock, but the Baldwins gave themselves no concern about punctuality. So long as there seemed to be any prospect of selling tickets, they kept the wicket open, and people had no resource but to wait until it suited the convenience of the management to make a beginning. The balloon differed materially from that employed by Spencer. The latter was of silk, its dimensions comparatively small, and the means employed to inflate it were tedious and elaborate. The Baldwins' balloon was a big, snuffy affair, made of red and white strips of coarse, strong cotton, sewn together alternately. Observing it, as it lay upon the ground, the centre slightly raised by means of a rope rove through pulleys, the spectators imagined that they were looking at the cover of the balloon only. But they were by and by undeceived. Conjecture was rife as to the means of inflating the balloon. At the Spencer performance an elaborate arrangement of barrels and pipes indicated the brewing of gas, but the Baldwins had provided themselves, apparently, with nothing more than a pile of fire-wood and a can of kerosene. In short, it is impossible to conceive anything rougher than their whole system. They had not so much as an instrument to open the oil can. The operation had to be performed eventually with a hatchet, and when it came to laddling out the kerosene, a considerable delay occurred while somebody ran to borrow a tumbler from the nearest restaurant. These details, however, did not disturb the spectators. On the contrary, they gave a certain air of impromptu to the performance. Just beside the place from which the balloon was to ascend, a wooden frame-work, 75 feet high, had been erected. At its base a net was stretched tightly some six feet above the ground. The first idea suggested by the tower was that it had been raised to serve as a hoarding for advertising the *Jiji Shimpō*, its waist being encircled by a broad belt of red cotton on which the ideographs "Jiji Shimpō" were conspicuously blazoned. But the real purpose of the edifice became apparent when the younger Baldwin, dressed in highly coloured tights, ascended to the top, and having scattered some bundles of advertisements among the crowd, proceeded, at a loudly shouted word from his brother, to launch himself into space, and crash down on the net, from which his body rebounded to a height of five or six feet. It was not a very graceful or edifying feat, but the apparent recklessness and peril of

such a leap pleased the multitude. Then followed the business of inflating the balloon. This was accomplished by means of heated air. Briefly speaking, a strong fire was lit at the mouth of a flue passing under the ground, and the balloon, or rather the big cotton bag, being held over the exit of the flue, gradual inflation resulted. It was a rapid process, occupying not more than fifteen minutes, and the interest was heightened by curiosity as to the fate of an aristocrat named Smith, who remained inside the balloon while it was being filled, and seemed to be in imminent peril of asphyxiation. Presently an order was given to shut off the supply of hot air, and immediately afterwards the balloon sailed upwards. People rubbed their eyes, wondering whether this big affair could only be intended for a pilot after all, but presently a kind of wailing whoop called attention to the fact that the balloon was dragging up with it the younger Baldwin. In all the glory of acrobatic tights he clung to a loop at the end of a rope hanging to a distance of perhaps fifty feet from the bottom of the cotton bag, and went swinging upwards in this decidedly perilous connection. The balloon shot up quickly enough at first, but at a height of about a mile its capacity of ascension appeared to be exhausted, and it drifted horizontally to the north-east. Meanwhile the aeronaut had climbed up his rope, hand over hand, to a bar on which he performed sundry gymnastics, the last act being suspension by the feet, head downwards, amid a chorus of horrified ejaculations from the thousands assembled below. Then came the parachute descent. The interval of sheer fall before the parachute expanded was $4\frac{1}{2}$ seconds, but the subsequent progress earthward was slow and easy. The balloon itself turned over immediately on being freed from the aeronaut's weight, and collapsed incontinently, discharging a trail of grey smoke as it tumbled from the clouds. The cream of Tokyo's curiosity about balloons has now been skimmed, and if Spencer and the Baldwins have successors, the financial results will probably be very different.

THE FIRST CHALLENGE ADDRESSED TO THE CABINET.

"WHEN Count Yamagata made his speech in the House of Representatives" says the *Hochi Shimbun*, "we expressed in these columns our regret that his statement simply embodied the general outlines of the Administration's views, and did not enable the public to obtain any real insight into the policy of the present Cabinet. As was to be expected, Mr. Arai Shogo, a member of the House of Representatives, with thirty-one other members sharing his views, has formally presented a written series of interrogations in respect of the policy of the Government. A mere document, to be sure, is Mr. Arai's catechism, but if we regard it in the light of the first challenge addressed by the House of Representatives to the Cabinet, it becomes an affair of no small importance. We are told that extraordinary meetings have been held by the Cabinet for determining the measures to be taken in dealing with the Diet, and that certain among the younger statesmen in the Government's ranks have been called in to give their advice. What do our readers think of this? We have received more information on the same subject, but we are not at liberty to publish it. We think that the interrogations formulated by Mr. Arai are not unreasonable, because a politician who wants to discuss the administration of his country must know on what policy the Cabinet is conducting that administration. Reviewing the history of the Cabinet, we see that the policy adopted in respect of education, although comparatively fixed, still presents a wavering appearance; that the policy pursued towards industrial affairs has been subject to changes corresponding with changes in the chief official controlling it, and that the policy followed in regard to the Navy and Army is so obscure that no one can discern which of the two is meant to be the principal and which the auxiliary branch of national defence. As to Treaty Revision, we have repeatedly opened negotiations and repeatedly been

obliged to withdraw from them. How does the Cabinet intend to deal with this difficult problem? These points, the people are naturally anxious to receive information about, and Mr. Arai has now opened the path of public instruction. What answers will the Yamagata Cabinet make to these queries? Its replies will be the first pledge given by it to the people; in other words, the first admission of its responsibility to the nation at large. What will be the answers? They may serve to indicate whether it is to be peace or war between the Yamagata Cabinet and the people."

* * *

The *Toyo Shimpō* writing on the same subject, says:—We know very well that the Minister President's speech was not exhaustive, and we consider it quite reasonable that questions should be formulated for the purpose of elucidating the points left obscure by Count Yamagata. But when the members propounding the questions assert that it is of the utmost importance to them to know the policy of the Cabinet in order to discuss the bills submitted by the Government to the Diet, we fail to appreciate their meaning. The function of the Diet is oversee the Administration. It is not required to work under the direction of the administrative officials. The administration may have its opinions and so may the Legislature. They may both obey their own convictions in dealing with national affairs, and it is open to them to discuss their respective opinions. There is no reason whatsoever for saying that unless it is in accord with the leading principles of the Administration's policy the Diet cannot discharge its function of advice and consent. To admit such a hypothesis amounts to a recognition that the Diet is not free to entertain independent ideas; that it is not called upon to oversee the administration, but is expected to behave as though subordinate to the latter. Subordinate administrative officials may very well say that they cannot discharge their duties intelligently without knowing the ideas of their chiefs, but such a suggestion should never be found on the lips of members of the Diet. We believe in the integrity of the Diet, and do not doubt that its views are independent and unfettered. Yet it would now appear that the Diet takes a very humble view of its own position. It is impossible not to heave a deep sigh over such a spectacle. The opinions of Count Yamagata may be of any kind. The Diet has nothing to do with them. It should form its own idea as to the course to be followed and the methods to be adopted in dealing with matters relating to education, industry, the army and navy, or Treaty Revision, taking the national circumstances and the people's condition as its guides, and according to the estimate thus formed, it should proceed steadily to discharge its duty. Nothing can be gained by first ascertaining the views of the Prime Minister and then slowly pondering over them. The principle at the root of Constitutional Government is that the wisdom of the many is collected and employed in the direction of national affairs, and it is therefore essential that every educated man should form his own opinions, since in this way only can the aggregate of opinions represent a maximum of wisdom. We think that the speech of Count Yamagata was profound and pregnant; so also are the questions now proposed. It is in the nature of human affairs not to admit of uniformity. They cannot be shaped according to one universal pattern by any theoretical process. In education neither the higher system nor the average system can be taken as generally applicable, and similarly industrial affairs may not be regulated by any hard and fast rule. Things differ in their tendencies, no less than in their aspects, and the methods of managing them must vary equally. If the Diet seeks to establish fixed principles for itself and the Government alike, it will be passing from the domain of administration and legislation to that of philosophy. We do not expect that constitutional Japan will produce students of philosophy instead of practical politicians and legislators, or that the first Japanese Parliament will devote itself to philosophical discussions

rather than to legislative and administrative debates.

There is a curious difference between the writings of these two journals. The only feature which they have in common is that neither is pro-Government. The *Hochi Shimbun* represents the Cabinet as not a little perturbed and perplexed by the queries of Mr. Arai and his supporters. The *Tokyo Shimpō* thinks that there need be no agreement between the Cabinet and the representatives of the people, but that each side may hold its own administrative views in absolute independence. A strange notion this latter, surely, and difficult to reconcile with any Western conception of Constitutional Government. If it be a matter of indifference that the Diet and the Administration hold different views as to the proper manner of conducting the national affairs, then we must abandon the theory that without agreement between the Cabinet and the majority in Parliament, the people's share in the Government is a myth, and the purpose of representative institutions fails.

Nothing could be more natural than that the Diet should seek to be informed of the Government's policy, and nothing more consistent with reason than to say that, failing such information, an intelligent conception cannot be formed of the Bills submitted by the Cabinet. The Diet is not in a position to judge the Cabinet's measures justly until it knows what is the general motive underlying those measures. It was to be expected that the step now taken by Mr. Arai would be among the earliest incidents of the Diet's career. The Law of the Houses provides that when a member in either House desires to put a question to the Government, he shall be required to obtain the support of not less than thirty members, and having obtained that support, he has to commit his question to writing and submit the memorandum to the President. The Law of the Houses also provides that a Minister of State shall then either immediately answer the question, or fix a date for making such answer, or shall explicitly state his reasons for declining to answer. Finally, on receipt of the answer, any member is entitled to move a representation concerning the affairs touched upon in the question. It is tolerably certain that the Diet will avail itself largely of this means of obtaining information of, and criticising, the Cabinet's policy.

THE "JOGAKU ZASSHI."

THE *Jogaku Zasshi*, as stated in one of our recent weekly summaries of the vernacular press, entered upon a new career of enterprise on the day of the official opening of the Diet, the 20th nitmo. Mr. Iwamoto Zenji had previously held almost sole charge of the editorial department, but henceforth much of the editorial work will be undertaken by lady writers, eight of whom have been newly engaged. The discussion of current topics will be in the charge of Mrs. Nakajima, wife of the President of the House of Representatives. It will be seen that she has every facility to be well acquainted with the passing questions of the political, no less than of the social and literary world. Moreover, she will publish from time to time short poems especially addressing herself to her own sex. Miss S. Wakamatsu, and Miss Tanabe will devote themselves to the writing of novels. Miss Ogino, who is well known as a distinguished graduate of the Female Normal School, and as the first lady physician in Japan, will write on the subjects of hygiene and the nursery. Scientific subjects will be treated of by Miss Yoshida, also a well-known graduate of the Female Normal School. Miss Ando, one of the first graduates of the shorthand writing department in the *Meiji Yo Gakko*, will have the charge of the reporters' department, while Miss Kojima, who is said to be an enthusiastic student of domestic economy, will discuss subjects relating to her speciality, and will write religious stories for children. Lastly the editing of the paper will be under the general superintendence and responsibility of Miss T. Shimizu. Mr.

Iwamoto, we are told, will continue to have connection with the journal. In announcing these changes, our contemporary reviews its position in the past and declares its policy in the future. The object of the *Jogaku Zasshi* has been, ever since the commencement of its existence, to be a reformer and leader among all the periodicals devoted to the interests of the fair sex. It has never sought a large sale by catering to the prejudices of society. This object, we are assured, will never change, but a critical moment has arrived in the history of the movement for the elevation of women's position in Japan, and a new responsibility has developed upon the *Jogaku Zasshi*. At one time female journals numbered more than ten in the city of Tokyo alone, but they have disappeared one after another until now there remain only three. One of these is Buddhist in principle, while another is entirely literary, and has no fixed principle. It is scarcely necessary to add that the third is Christian. Simultaneously with this decline of the female cause in the journalistic world, things have been taking a similar course in the sphere of female education. Under these circumstances, the *Jogaku Zasshi* thinks it necessary to return to the first days of its existence, and repeat what it then wrote as to the vital importance of promoting female education and elevating the position of women. Our contemporary also promises to publish a large monthly supplement containing elaborate essays on various subjects interesting to women. Judging from the numbers before us, the columns of our contemporary have become far more interesting in many respects, and we hope that its disinterested enthusiasm may meet with the warm support of every one in sympathy with the cause it champions so stoutly.

QUESTIONS ADDRESSED TO THE GOVERNMENT.

MR. ARAI SHOGO, a member of the House of Representatives, availing himself of one of the privileges granted by the Law of the Houses, has drawn up a series of questions and handed the memorandum to the President for submission to the Government. The questions are four:—First, whether, in educational matters, the national system is to aim at higher education or at ordinary education. Secondly, whether a positive or a negative policy is to be pursued in respect of industrial affairs. Thirdly, whether the increase of the country's military armament is to be limited to defensive requirements, whether the Army or the Navy is to be regarded as the chief branch, or whether both branches are to be increased. Fourthly, what stage has been reached in respect of Treaty Revision, and what policy the Cabinet intends to pursue towards it in the future. To these very important queries answers will doubtless be given in a few days, and we may then anticipate debates of high interest in the Diet.

MESSRS. HARPER AND RUDYARD KIPLING.

THE following article in the *New York Times* throws a new light on the recently much discussed relations between Mr. Rudyard Kipling and Messrs. Harper and Brothers:—

A recent number of the London *Athenaeum* contained a very perversely account of the relations of Messrs. Harper & Brothers with Mr. Rudyard Kipling, an account so perversely that it could scarcely have proceeded from Mr. Kipling himself. Mr. Kipling, however, returned the honorarium of £10 which the Harpers sent him upon the publication of their collection of his stories, and this seemed to give his support to the accusation against them of unfair dealing. It appears that the volume of Mr. Kipling's stories issued by Messrs. Harper & Brothers was made up, with a single exception, of stories that had already been bought by them in the form of advance sheets, from Mr. Kipling's agent in this country, on his own terms, and published in the Harper periodicals. The exception had already been published in several American newspapers. This story will be omitted, we are informed in subsequent editions of the Harper collection, and its place supplied by another story, the advance sheets of which have been bought at the price asked by Mr. Kipling's agent, and the publication of which will be begun in the next number of *Harper's Weekly*. Now, obviously, if Messrs. Harper & Brothers had not a moral title to this literary property, in the absence of the international copyright that alone could give them a legal title to it, they at least had a better

title than anybody else could show to literature which they had bought and paid for. Of course, they could not can any American publisher, pay a fair equivalent for the value of a book which can safely and will surely be reprinted by other publishers as soon as it is shown to be successful. But the amount received by Mr. Kipling from Messrs. Harper and Brothers on account of the stories published by them, instead of being £10, as would appear from the account in the *Athenaeum*, was, in fact, £88, including the £10 paid by way of honorarium for the story not already paid for by them. It is quite impossible to see in this case, when it is fairly stated, any excuse whatever for the spiteful suggestion made by a correspondent in the *Athenaeum*, of Oct. 25, that the British public should revenge itself for the wrongs British authors are assumed to have received at the hands of Messrs. Harper & Brothers by boycotting the English edition of *Harper's Magazine*. "Let us agree together," says this correspondent, "to have no more dealings with such firms until the offence be fully purged. Let us, in particular, decline to write for their magazines, to advertise in them, to notice them in our review columns, to accept them in our advertisements, or to allow them in our houses." Certainly this proposition does not lack vindictiveness, but if it be tranquilly examined in the light of the facts its silliness will appear even more conspicuous than its spitefulness.

A MISSIONARY ON THE SITUATION.

THE following extract which appeared some time ago in a home journal, appears worth reproduction; it is from the pen of the Rev. J. H. de Forrest, D.D., of Sendai:—

Last spring Mr. Large, a Canadian Methodist missionary, was murdered in Tokyo. Shortly after that Mr. Summers, an Englishman, was knocked over by a lancer while awaiting, with his hat on, the passage of the Empress Dowager. A little later Rev. Dr. Imbrie, of the Presbyterian Mission, was assaulted, beaten, and cut, by some students of the Government College in the capital.

These three occurrences have led people into wild surmises. "Are the missionaries all going to be killed out there?" "Will you all be driven from Japan?" "Hada't we better be getting some gunboats around there?" These and other equally panicky questions are often asked me since my return to the States. The following brief points may be helpful to an understanding of the situation:—

1. According to the present treaties, foreigners are allowed to reside in only half a dozen ports now open to foreign commerce. No residence in the interior is allowed, save as the foreigner is employed by Japanese. All missionaries, therefore, in Kyōto, Okayama, Sendai, Nagoya, etc., are there in virtue of some contract to teach. They hold a resident passport which gives them the liberty of the city and neighbouring country. As a rule persons thus employed, whether male or female, cannot travel to an open port without a special passport. The treaties do not allow foreigners to hold property outside of the open ports. It follows, therefore, that all missionary houses with their lands, and all schools built with foreign money, are held legally not by the foreigner, as many people suppose, but by some trusted Japanese. Outside of the concessions, there are dwellings, schoolhouses, and churches that cost hundreds of thousands of dollars, all contributed by various mission boards, but not one inch of land, nor a tile on the houses, is held in a foreigner's name. In most cases the Japanese in whose name the document is made out passes it over to the missionaries and it is kept in the mission safe.

2. No foreigner is subject to Japanese law, whether he be in the open port or employed in the interior. Though Japan has a well-organized army and navy, a thorough system of police, court-houses, and jails, the Japanese Government cannot try any foreigner for any crime whatsoever. Western nations have transplanted their courts of justice to Japanese soil, and have built their own prisons there. One of our missionaries was once on a jury to try a citizen of the United States for murder. The accused was found guilty and was condemned by our consul and his jury to be hanged.

Now if any European power should attempt to arrest and try one of its citizens in the United States for the murder of an American, the whole nation would rise as one man to resist the invasion of our independence. And is it fair for Christian nations to do in Japan what they would not suffer Japan for a moment to do in our land? Would it not be far more just to abolish the old treaties that for one full generation have kept the hated extraterritorial clause in operation, and to treat this great and progressive nation as an equal? However warmly one may sympathize with Japan, in order to give an intelligent reply to these apparently simple questions, it is very necessary to understand

3. The judicial system of that land. While we heartily rejoice in the progress of this great nation in all governmental and educational lines, few people in the States are aware that trial by torture was abolished only a few years ago, and that not until this year did Japan have a published code of criminal and civil laws. Now, then, is it possible for the most friendly Western nation to make a treaty with Japan that shall give her judicial autonomy? What nation is there that is willing to pass her citizens over completely to Japanese

jurisdiction before there has been fair trial of five or ten years of these newly published codes? The only nation that has done this is Mexico. The three great nations that were willing to accept to accept the proposed revision—Germany, Russia, and the United States—were not asked by Japanese statesmen to put their citizens at once under Japanese law, but it was planned to continue some form of extraterritorial privileges for a few years. In other words, the statesmen of Japan, in consultation with the statesmen of Western nations, felt that it was wise, in revising the treaties, to give foreigners the benefit of the presence of foreign judges in all cases in which aliens were brought into court.

The politicians of Japan, however, are bitterly hostile to any revision that does not recognize her full judicial and tariff autonomy at once. They demand perfect equality with all treaty Powers. And the large Conservative party, playing on the intensely patriotic spirit of the people by means of influential journals and lectures, joins with the politicians in the cry of "Japan for the Japanese." This combination was powerful enough last year to defeat the proposed revision. They are asking what the most friendly foreign power, save such as Mexico, would be unwilling to grant.

4. Under these circumstances it is impossible but that an anti-foreign feeling should arise, and it is natural that among a people aroused and excited there should be individuals who will magnify personal grievances into national ones and be led to acts of violence and even of murder. If anything should now occur to inflame the people and to deepen this feeling of hatred, in all probability some foreigners would be assaulted and killed. And as missionaries are more scattered and exposed than any other class of foreigners, some of them would be among the victims. But it should be understood that the Government of Japan would do all in its power to protect all foreigners, and there is no likelihood of any wide attack or conspiracy against us.

5. This feeling has deeply affected missionary work. Missionaries are foreigners. They are not citizens of Japan nor are they subject to her laws. And though in many cities they are received with politeness and even cordiality, in other places, where the anti-foreign feeling is strong,—for example, Tōkyō,—they meet with indifference, and even with signs of dislike from the people. But in the churches and Christian schools, while some missionaries who lack in tact are disliked, others have the high regard and confidence of the Christians, and no political movement will ever break the sacred friendships that exist between scores of missionaries and those whom they have led to their great moral and spiritual decisions. And yet, in the practical work of missions, our best friends in Japan are telling us frankly that they understand Japanese character better than we do, and that they desire to have every important place filled with Japanese as soon as practicable. They say they now have the Bible and the beginnings of the various forms of Christian work in the shape of independent churches, schools for boys and girls, missionary societies, young men's Christian association methods, publication houses, and a Christian press. For all that we have done in starting these they give us generous credit. But they now have among them Christian statesmen, philosophers, authors, preachers—men who are accustomed to do their own thinking, and who, with the best of motives, wish to make a Christianity that shall belong as essentially to Japan "as New England theology does to New England or German theology to Germany."

This is no new movement on the part of the leaders of Christian thought in Japan. It has been in their minds and in ours for years. What encouragement we have given to it may be partially estimated from the fact that out of the twenty-six boys' and girls' schools in connection with our work, twenty-four are headed by Japanese. But the anti-foreign feeling has given occasion for a free and frank expression on the part of the Japanese leaders that the time has come when foreigners should cease to write home about "our churches," "our schools," and "our helpers." They do not wish any foreign name fastened to their church. They are not Congregational, but *Kumiai* churches. They do not want foreigners to be heads of Christian work, nor to regard themselves as such, but to be avowedly co-labourers or helpers. Those who express these views are, as a rule, among our most trusted friends, and there is no shadow of bitterness in what they say. They ask for more missionaries to help them occupy six new stations, and for some of the experienced ones to tour with them and aid in the formation of new churches.

6. There are some discouraging elements in the present situation, but more, I believe, that should inspire us with hope. This almost passionate desire, on the part of the Christians to develop a Christianity that shall form an integral part of Japanese civilization, may perhaps promise more for the future of Christianity than any plan of civilization led by foreigners. We carry to mission fields the burden of sectarian rivalries, and the deeper divisions of Protestant, Catholic, and Greek. Suppose now that in the near future political complications should render it impossible for us to labour in Japan, the same political situation would tend to bring all Christians into harmony, under the magic of that cry, *Japan for the Japanese, and a Japanese Christianity for Japan*. And since Protestants are much stronger than

all others combined in intellectual power and popular influence, the trend of Christianity would naturally be towards liberty of thought, based on the open Bible. There would be no persecution, for the Constitution guarantees religious freedom. Very likely there would arise sects, but they would not be imported ones.

7. That our Japanese friends mean to be worthy of the highest places in the evangelization of their forty millions is seen also in this fact—that they are coming more and more to the United States to take post-graduate courses of study. Many of their best preachers and teachers are now in our universities, winning honours and praise. Their young ladies, too, are planning to be principals of Christian girls' schools, and are coming to Wellesley, Mt. Holyoke, Mills, and other colleges. There cannot be found on any mission field more remarkable and conspicuous proof of success than is seen in the fact that Japanese are already at the head of every department of Christian work in their country. In this movement the missionary will often feel deeply hurt at words that may be uttered and by actions that leave him out in the cold. But he will rejoice that Christ is being preached, and he will excuse slights on the ground that there is no more of unchristian spirit in the Japanese brother than he has seen among mission circles. The missionary must decrease in every successful and abiding work, while the native must increase. Missionaries in the pulpit, missionaries as principals of schools, missionaries as evangelists, missionaries as editors and creators of Christian literature—these are not signs of success; rather they are sure signs that success has not yet been reached.

I chanced to see a quotation recently from *The Medical Record*, written with no reference to mission work. It is so strikingly applicable to the science of missions that I give it entire, leaving the application to the reader:—

"The basis of scientific medicine is the same for all lands and all peoples, but the superstructure must vary with the varying conditions of conditions of constitution, climate, etc. In all new countries the fundamentals of medical science must be taught by foreigners, but when the natives are themselves proficient in these, the farther development of the science in their own country must be left to them. They know their own people and they know the general principles of the healing art, and it is for them to apply their knowledge in such a way as to obtain the best results. The foreign physician has then fulfilled his mission and can safely turn over farther development of his art to the natives."

To sum up, Japan desires the abolition of extraterritoriality. The necessary delay on the part of Western Powers in agreeing to this natural desire has caused a growing dislike of all foreigners. This strong national feeling penetrates even into Christian work and gives occasion for the frank desire that extraterritoriality in mission work also should be abolished. The transplanting of foreign sects with their inherited quarrels, presided over by aliens, does not meet with favour among the men whose ability and zeal are making Christianity a moral power in Japan. Missionaries will be welcomed as helpers on of a great work, the main direction of which henceforth belongs not to foreigners but to natives. This necessary step towards a completed missionary work will furnish new grounds for friction, and will therefore, for the next and last generation of missionaries, require from both sides an especial exaltation of the Master's ever new command, "Love one another."

Mr. de Forrest is no doubt correct in his account of the estranging effect produced by perpetuating the present system in Japan. He is also right, we believe, when he hints that the desire of the Japanese to see their country relieved from her present international disabilities has become so morbidly intense as to intrude itself into spheres where it is at once incongruous and mischievous. We believe that no small part of the tendency to strike out a form of Christianity which shall be free from all alien stamp except in its prime essentials, is to be traced to this exaggerated sentiment of nationalism. But Mr. de Forrest falls into three conspicuous errors of fact. The first is his statement that "no foreigner in Japan is subject to Japanese law." This singular definition of extraterritoriality was given recently by the New York Chamber of Commerce also. It shows how very little is really understood about the judicial phase of the subject, even by persons who, like Mr. de Forrest, are sincerely anxious to be just and accurate. Still more remarkable, however, is the reverend gentleman's assertion that "not until this year did Japan have a published code of criminal and civil laws." Can Mr. de Forrest really be ignorant that the criminal code now in force was published in 1881, and came into operation on January 1st, 1882? Presumably he is ignorant, incredible as it seems, and presumably he has also taken his idea of the Japanese proposals for Treaty Revision from the exceedingly incorrect statement made to the

Yokohama meeting of September 11th. The meeting was told that the Japanese Government had asked for the immediate submission of all foreigners outside the Settlements to Japanese jurisdiction, though the Japanese Government had never asked for anything of the kind, and Mr. de Forrest heightens the blunder by saying that "the politicians of Japan are bitterly hostile to any revision that does not recognise her full judicial and tariff autonomy at once." In what this grossly mistaken notion had its origin we cannot conceive. It has been repeated on several occasions, yet its flagrant incorrectness ought to be well-known. There is not and never has been any question of the immediate recovery of Japan's tariff and judicial autonomy.

MR. GLADSTONE'S APPEAL TO HIS OPPONENTS ON HOME RULE.

Subjects for the Day is the title of a quarterly magazine lately projected in London. It is published by Messrs. Routledge, edited by Mr. James Samuelson, and its distinguishing characteristic is that it discusses only one subject in each issue, but that is discussed by different writers, and as far as is possible from all points of view. The November issue of this periodical treats of Home Rule, and opens with a paper by Mr. Gladstone entitled "Home Rule for Ireland." Mr. Gladstone's paper is calm and unimpassioned in tone; it is closely reasoned in substance, and as it gives in the most authoritative way all that its greatest advocate can say in favour of Home Rule to his political enemies, a general summary of its contents will interest our readers. "Often," says Mr. Gladstone, "meditating on the Irish question, I as often ask myself why the Tory householder should be an opponent of the Irish claim. The Tory householder fears Radicalism. Why should he persist in securing for it within the walls of Parliament 85 Irish allies, who must be radical as long as they are nationally discontented? The Tory householder likes a quiet life, but as long as Home Rule is denied he can have nothing but an unquiet life. The Tory householder likes ancient institutions, but it is back towards her ancient institutions that Ireland wishes him to travel, and he is fighting for a novelty. Our demand upon the Tory householder is a very simple one. We only ask him to think. With this simple demand the bulk of the Tory and anti-Irish voters have not yet largely complied. The greater part of the Liberal successes has been due to the rallying of our forces, not to acquisitions from theirs. But a sprinkling of them we have gained, and the sense of refreshment from it makes us wish to help towards a right conclusion those who feel themselves to be sorely shaken in one conclusion but have not yet taken to another, and those forming no small fraction of the crowd who have thus far declined the trouble of thinking at all. My question, then, on which I ask them to think, is why should they continue to deny Ireland the one and only thing she seeks from them, that is to say, the gift of a measure of self-government, central in that it should be carried on in Dublin, but local in that its power should be confined to purely Irish affairs, and subject, like all the other local legislatures of the Empire, to the supremacy of the Imperial Parliament at Westminster. Shall the answer be this: We vote against the Irish because the educated or upper classes are in overwhelming majority against them. I admit and lament the fact; I deny the reason. You may safely follow the educated or upper classes now if on looking to the past you find that you might safely have followed them upon the other great controverted questions of which the last half-century has been full. But you will find that if you had so followed them it would have been to the detriment or even to the ruin of the country." "You have a great trust in your Parliament, a painful apprehension that in some way it has broken down, and a lively desire that it should be again made competent for its work and should do it thoroughly. I tread here upon ground which you will admit to be solid, for the things which I have last been saying are in truth the commonplaces of all men

and all parties. Every observer, the commonest and the closest alike, is aware that the affairs of Ireland engross an inconvenient amount of Parliamentary time. The population of Great Britain is to the population of Ireland as eight to one. The time spent on the affairs of Great Britain is to the time spent on the affairs of Ireland as three to one. We should at once reduce by one-fourth the load that is pressing our Parliament to the ground could we get rid of Irish affairs. Now this, as far as it goes, our Tory friends must admit to be a strong practical reason for Home Rule. I will not push it too far. If we could point to a prosperous and happy Ireland, I for one should admit that it might be worth our while to spend much of our time in this redeeming the faults, the follies, and the cruelties of former years and centuries; but it is not so. At present we spend, relatively to population, much more than twice as long in keeping Ireland unhappy as we spend in keeping Great Britain contented. "We are assured by bodies of gentlemen residing in the North that the proposal to let Ireland manage Irish affairs puts them in fear for their life, their property, their religion. For their religion? This is, indeed, a singular charge. This Roman Catholic people who so bitterly hate Protestants are led by a Protestant, Mr. Parnell, a Protestant of Protestants, I suppose, for he was chosen after the disestablishment to represent his fellow Protestants (of the diocese) in the Synod of his Church. Before Mr. Parnell they were led by Mr. Shaw, another Protestant. Before Mr. Shaw they were led by Mr. Butt, still another Protestant! In fact, nearly all their leaders have been Protestants, and many of their martyrs, such as Lord Edward Fitz-Gerald and Wolf Tone. There was a time when persecution, which has as many forms as Proteus, took the form of burning. Were the Irish particularly fond of burning for religion's sake? Were they as fond of it as the English? We have heard that in the time of Queen Mary the English burned Protestants pretty freely, I think about two a week while the fury lasted. In Ireland the Protestants were far weaker, and might have been burned more safely and more easily. Not one of them was put to death. Nay, English Protestants fled from Chester and from Bristol into Ireland because they knew they would be safe there. Three hundred and more years ago all the world was for persecution except, it seems, the Irish. So far, then, the Irish taught the world the canons of justice and of freedom, and the world has now at length in great part learned the lesson. Can we suppose that the teachers have renounced their own teaching, and having been the first to discern the light, with no one to keep them in countenance, that they are now, when all our eyes are at last opened, bent upon shutting theirs?" "How shall we probe this question to the bottom? Hardly by the case of Ulster, for there the population is almost equally divided between Protestants and Roman Catholics, so that the Protestants can hold their own. But in the other three provinces, as a whole, the Roman Catholics are, speaking roughly, five to one. In some counties they are ten to one, or even twenty to one. If the Roman Catholics had this horrid propensity to persecution it must have come out disagreeably in social forms, especially in those places where the Protestants are too weak to make head. Are these scattered Protestants of the three provinces, then, annoyed by the Roman Catholic masses among whom they live? I call a recent witness into court. Mr. Irwin, a Presbyterian minister and a declared friend to the Union, published last June a history of Presbyterianism outside Ulster—the very thing we want. He gives us the testimony of the Presbyterians on this subject. "Their uniform testimony is that they, a small minority, have been treated with kindness by the great mass of the population among whom their lot is cast." "What is the case of the Anti-Irish party on their own showing? Mr. Bright said, and other leading Dissenters have repeated, that two millions of the Irish were opposed to Home Rule. The friends

of Home Rule, then, according to their estimate, are but two millions and three-quarters. To make up for the odd three-quarters the anti-Home Rulers have behind them thirty-three millions of people in Great Britain, overwhelmingly Protestant, and ready, as they know, to defend them if unjustly attacked with their numbers, their wealth, their determination, with their Government, their army, and their navy, the Irish Roman Catholics not having a soldier or a ship, and it not being proposed to give them right to create either the one or the other. Was there ever a more astonishing case of groundless if not simulated apprehension? Was there ever a better case for applying the dictum of Dean Swift, who sarcastically said that "ten men well armed will commonly find themselves able to overcome one man in his shirt?" After maintaining that the present method of governing Ireland does not suit our purse, promote our honour, or augment our military strength, Mr. Gladstone goes on:—"We are not, however, the first country or the first dominant portion of a country which has been asked from a conjoined and incorporated section of its territory to concede Home Rule and has refused the request. Holland was asked for Home Rule by Belgium and refused it. Belgium is now independent of Holland. Denmark was asked for Home Rule by Schleswig-Holstein and refused it. Schleswig-Holstein is now independent of Denmark. Turkey refused Home Rule to her European provinces. Five-sixths of them have now got quit of Turkey. In the case of Lombardy Home Rule was never tried by Austria, and she has lost it altogether. Russia no doubt has denied Home Rule to Poland and yet has continued to hold it, but holds it as a danger from without and as a drain on her resources within. Such with respect to the denial of Home Rule are the teachings of experience. But Home Rule has often been conceded; and as the denial has in no case been attended with success, so the concession has in no case been attended with failure. Sixty years ago we governed our own British colonies from Downing-street. The result was controversy, discontent, sometimes rebellion. We gave them Home Rule, with the same reconciling results as have followed elsewhere, and with this result in particular, that what was denounced here beforehand as separation has produced a union of hearts between us and the colonies such as had never been known before. The claims of Ireland to self-government as compared with the colonies of British blood are in one point of view very much higher indeed. In the colonies one and all, with a weaker case, we gave it. By so doing we averted danger, escaped embarrassment, secured content, and raised our reputation throughout the world. It remains to apply to Ireland the same medicine, with stronger reasons but in a milder form, and with a confidence of success such as can only be attained in cases like this, where the entire force of reasoning is confirmed by the unbroken results of analogous experience." These extracts it should be mentioned are not at all continuous, though they may appear so as given above. An attempt has been made to give the substance of Mr. Gladstone's arguments in Mr. Gladstone's own words and it has been necessary in order to do this to omit many of the illustrations, and qualifications, and many of the quiet gibes at his opponents which are characteristic of all he writes or speaks.

THE "JAPANESE BOTANICAL MAGAZINE."

The *Japanese Botanical Magazine* has reached its forty-sixth number, and continues to sustain the reputation acquired in its early days. The list of contributors includes many of the best known names among Japanese scientific men, as Professor Yatabe, Messrs. Tanaka, Tashiro, Miyoshi, Sawada, Hori, Makino, Yamamoto, Okada, Yoshinaga, and so forth, and the contents indicate a wide range of research. It is evident that this magazine is destined to play a most important part in the history of Japanese botanical enquiry. To any one who as a writer has to translate the names of Japanese plants and trees into English, or who being fortunate enough to possess the means and the leisure to

cultivate a gardening taste, wants to know something of the botanical resources of the country, the lists contained in the magazine will be simply invaluable. To exemplify this we quote, at random, a portion of one of these lists:—

Stock. Acaseito.	Sweet-scented Vernal-grass. Haru-gaya.
Stone crop. Benkeiso.	Sweet Sedge. Oni-zeki-sho.
Strawberry. Oranda-ichigo.	Sweet Verbena. Boshu-boku.
Strawberry-bush. Mayumi.	Sweet Violet. Nioi-sunibe.
Strawberry Geranium. Yuki-no-shita.	Sweet William. Amerika-nadeshiko.
Strawberry Tomato. Hozuki.	Sycamore. Botan-no-ki.
Striped-grass. Shimagaya.	Tacamahac. Dero.
Succory. Kiku-jisa.	Tamarisc. Goryun.
Sugar-Cane. Sato-kibi.	Tansy. Yomogi-giku.
Sumach. Haze-no-ki.	Tape-Grass. Sekisho-mo.
Sundew. Monegoka.	Tate. Kusa-fuji.
Sunflower. Hinawari.	Tea Plant. Cha; chano-ki.
Supple-jack. Kumayanagi.	Tear-Thumb. Unagitsukami.
Sweet Acorus. Onizekisho.	Teasel. Oni-nabena; chosel.
Sweet Basil. Mehoki.	Thistle. Azami.
Sweet Cicely. Yabuninjin.	Thorn-Apple. Mandarage.
Sweet Clover. Shingawa-hagi.	Thoroughwort. Hiyodori-bana.
Sweet Flag. Oni-zeki-sho.	Three-leaved Nightshade. Enreiso.
Sweet Gale. Ezo-yamamomo.	Thyme. Hyakuriko.
Sweet Gum Tree. Fu.	Tickseed. Kinkei giku.
Sweet-Leaf. Hai-no-ki.	
Sweet Potato. Satsuma-imo.	

It is plain that, by and by, these lists will constitute an immensely valuable addition to Japanese-English lexicography. The contents of the magazine are, of course, for the most part in Japanese, but occasionally we come across an excellently written and interesting essay in English. Such, for example, is Mr. Tanaka's account of *Hatsudake* and *Akahatsu*, two edible Japanese fungi well known to every foreigner who keeps house in Japan. The writer concludes that it is an error to confound either of these fungi with the *Lactarius deliciosus*, as has hitherto been done, and that they both belong to new species. We quote a portion of his paper for the purpose of illustrating the style of the magazine:—

In Japan, *Hatsudake* has a very wide range of growth, and is one of the common edible fungi, highly appreciated almost all over the country. It appears chiefly in pine woods, and in great abundance in early autumn, previous to many other edible species; hence the name of "*Hatsudake*" or "first fungus." In the vicinity of Tokyo it grows abundantly at Matsudo and Kogane in the province of Shimosa. In its season it is sold in vegetable markets in small shallow baskets made of bamboo. In preparing it for the market the lower portion of the stalk is cut off, and the pileus placed upside down in the basket. Each basket contains about twenty or thirty of the fungi, and the whole is covered with large fresh leaves, such as those of *Lappa* major, to prevent the fungi from drying. Of these fungi thus exposed to sale we can distinguish two different species, one of which is the ordinary *Hatsudake* and the other, an allied species commonly called "*Akahatsu*." They are often put together in one basket and are collectively called by the common name of "*Hatsudake*"; but they can easily be distinguished one from the other by the difference in colour of their gills. *Akahatsu* is much inferior in its taste to *Hatsudake*; hence its market value is also much less than that of the latter.

Although these fungi were already described by our old writers in many botanical works, yet their systematic position has yet been unsettled. *Hatsudake* and *Akahatsu* can easily be recognized to be species of *Lactarius* by their general characters and especially by their milky gills. On account of this well marked character and its esculent nature, *Hatsudake* has been confounded with *Lactarius deliciosus* (L.) Fr. by different writers.

The "*Botanical Magazine*" is published under the auspices of the Tokyo Botanical Society, No. 6, Minami-Senju-machi, Tokyo.

* *Ato*, red; *hatsu*, first. The fungus described under this name in Sakamoto's "Kimpu" (*Fungus Flora*) seems to be a different species.

RUSSIA IN ASIA.

The *Nippon-jin* discusses in recent issues the position of Russia in Asia, especially in her relation to Japan. To some of the views expressed by our contemporary, we must be allowed to take exception, but we confess, at

the same time, that the articles before us show more than ordinary research and command of facts. The Tokyo periodical thinks that many of its countrymen over-rate the effective strength of Russia as an Asiatic Power. To disprove this erroneous notion is the task which the *Nippon* sets itself in the present essay. There are, says our contemporary, three things which, of all others, excite feelings of alarm and terror in the minds of the Japanese, namely the mighty and well disciplined army of the Czar, the construction of the Siberian railway, and the colonization of Saghalien. As to the fighting capacity of Russia in Asia, Japan need not, we are told, be afraid of the great Northern Power, because, in addition to Russia's financial embarrassment, her position in Europe and in the south and west of Asia is such that she could not spare troops to operate effectively against any country in the Far East. The *Nippon-jin* writes at great length, elucidating these points with copious references to statistics and historical facts, but we cannot follow it into such minutiae. As to the Siberian railway, our contemporary observes that its completion will go a great way towards developing the natural resources of the regions through which it passes, and that it will furnish new markets for Japanese and Chinese products. In this respect, the line deserves the closest attention of the Japanese nation. But its military value is comparatively small, when we remember that the gauge is narrow and the line single; that many river passages interrupt the continuity of the route, and that these rivers are frozen during several months of the year. Thus to entertain serious apprehensions, from a military point of view, about the consequences of the completion of the road, would be, we are told, to entirely misunderstand its true functions. Lastly, as to the colonization of Saghalien, our contemporary attaches little weight to it. Quite an excitement seems to have been caused in certain quarters by the report of the establishment of convict stations on that island in the course of the present year. Saghalien is extremely poor in soil and has no natural products except coal of doubtful character. Nor does it contain any harbour that can be used as a naval station. The colonization of such an island need not, says the *Nippon-jin*, attract the attention of the Japanese in any extraordinary manner. Our contemporary ends its essay by a strong appeal to the nation to cast aside the absurd notions at present entertained as to the power of Russia in Asia.

PIRACY IN CHINA.

A TELEGRAM in the *N.-C. Daily News* reports the piracy of a Hongkong steamer, the *Namoa*, one of the Douglas Company's ships. This vessel has been on the Hongkong-Poochow line for a great many years, and was commanded by Captain Pocock, the oldest master, with the exception of Mr. S. Aston, in the company's service. The Hongkong papers received to-day do not contain any information in regard to the affair, but as the vessel cleared at the Harbour Office on the 8th inst., the piracy probably occurred on the 9th, as the telegram states that it took place "near Hongkong." The most lamentable part of the business is the death of the captain and two others. The old trick was resorted to by the pirates of taking bents on board the steamer in Hongkong as passengers, and arranging signals to the piratical junks at sea at a spot agreed upon. It must have been a deep laid scheme, however, and boldly carried out, for precautions are taken both in regard to armament for such a contingency and in the scrutiny of the passengers, and Captain Pocock was endowed with more than ordinary courage and caution. Piracy is still common enough in the waters round Hongkong, as the Police records of the Crown Colony testify, though of late years the attentions of the pirates have been mainly directed to the large junk trade sailing out of the port. In the sixties probably half a dozen similar cases occurred, but since that of the *Spark* in 1874 and the *Greyhound* eleven years later no foreign steamer has been seized and robbed

on the high seas. Captain Pocock leaves a wife and several children to bewail his sad and untimely end, and as all the deck officers and engineers were Europeans, the two others mentioned as killed are doubtless some of these.

GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 13th instant, as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per yen 100) Silver Yen.	Pound Sterling (Per £1) Silver Yen.
8th.....	120.000	A.M. 5.8536 P.M. 5.8536
9th.....	118.800	A.M. 5.9259 P.M. 5.9259
10th.....	119.500	A.M. 5.9259 P.M. 5.9259
11th.....	119.500	A.M. 5.9259 P.M. 5.9259
12th.....	119.000	A.M. 5.8536 P.M. 5.7831
13th.....	117.500	A.M. 5.8536 P.M. 5.8536
Averages.....	119.050	5.8779

The above averages show for gold coin an increase in value of yen 0.750 per cent., and for the pound sterling an increase in value of yen 0.0265 as compared with the previous week.

THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 13th instant were as follows:—

CONVERTIBLE NOTES.	RESERVES AND SECURITIES.
Yen.	Yen.
Notes issued.....100,095,548	Gold coin and bullion.....24,903,710
	Silver coin and bullion.....10,200,480
	Public Loan Bonds.....13,476,455
	Treasury Bills.....—
	Government Bonds.....33,000,000
	Other securities.....4,712,181
	Commercial Bills.....15,600,721
100,095,548	100,095,548

Of the above total issue of notes, the sum of yen 4,681,545 is in the treasury of the Bank, 22,000,000 has been transferred on loan to the Government, and yen 73,412,003 is in actual circulation, the latter showing an increase of yen 812,247 as compared with yen 72,599,756 at the end of the previous week.

THE MORI TOKINOSUKE AFFAIR.

MR. SUYEMATSU SABURO, who has suddenly sprung into parliamentary eminence as the chief mover in the first collision between the Administration and the House—namely, the affair of Mori Tokinosuke—was formerly called Komijoji Saburo. Before he changed his name to that by which he is now known, he held a position of some importance in the Judicial Department, and of late years he has been regarded as a leading member of the *Daido Danketsu* party. It is not yet by any means certain that his effective and strenuous action in the case of Mori Tokinosuke will earn for him the lasting gratitude of the House of Representatives. On the contrary, a suspicion is gradually coming to be entertained that the House has thrust itself into an embarrassing position, and that to emerge from it with dignity will be a difficult feat. It will be remembered that after the resolution adopted on the 4th instant—i.e. the resolution declaring that a member arrested while the House was not in session could not be held in arrest without parliamentary consent after the House had come into session—a special committee was appointed to consider and advise upon steps proper to give effect to this resolution. The Committee recommended that the resolution should be communicated to the Minister of State for Justice, and the Minister, replying, said that he had no power to interfere with the proceedings of the Judiciary, except in the event of a distinct violation of the Constitution. This reply plainly involved the idea that the Minister himself did not agree with the House's rendering of the Constitution, and if the Minister of Justice took that view, obviously the Cabinet did so also. What then was the House to do next? Another Committee was the easiest refuge, and another Committee was accordingly nominated. This second Committee has not yet presented its report, and

people naturally infer that it finds some difficulty in deciding between the two courses which offer themselves. The first Committee was elected at 10 o'clock p.m., and by the following day at noon it was prepared with its report. It incurred some censure for this seeming precipitancy, and possibly the second Committee may have taken warning by its example. However this may be, the task before the second Committee is quite sufficiently puzzling to warrant delay. The Committee has to choose whether the House should address the Throne, thus appealing, as it were, from the decision of the Government to the Sovereign; or whether it should content itself with passing a supplementary law by which the privilege asserted in its proposition of the 4th shall be placed beyond the reach of all misconception. The latter plan would simply amount to an announcement that in the opinion of the House the Law is incomplete, and that while no question is raised as to the legality or illegality of the Judiciary's proceedings in the case of Mori Tokinosuke, occasion is considered to exist for the enactment of a statute which shall completely secure the privileges of members. If this course be adopted, the House of Representatives will effect its purpose directly and quietly, for it will not only ensure the practical operation of its rendering of the Constitution, but will also avoid an unnecessary collision with the Administration and the Judiciary. The choice between the two courses is sufficiently important to justify very grave deliberation on the Committee's part, and moreover, it seems to be pretty generally understood that the House is in no hurry to have a report submitted to it. The members, it is whispered, are beginning to perceive that they might have been better advised, and that their former haste may now be fitly replaced by leisurely reflection.

DR. D. BRAUNS ON JAPANESE POETRY, MUSIC, AND TRADITIONS.

AMONG the publications of the Parisian press for the current year appears a brochure by a professor in the University of Tokyo who left Japan half-a-dozen or more years ago. It is published by Maisonneuve, and is entitled, *Traditions Japonaises sur la Chanson, la Musique, et la Danse*, forming Volume IV. of a series on *la Tradition*. It is a pity that Dr. Brauns has not seen fit to conform to the Romaji spelling, and also that greater uniformity is not shown in the spelling throughout. For instance Mr. Greby's name, frequently quoted throughout, appears as Greay or Greey, but never exactly as spelled on that author's own title pages. The brochure is divided into three chapters, the first treating of Japanese poetry, music, and dancing, the second of traditions relative to these, the third of an examination into these traditions. While in Japan Dr. Brauns devoted a considerable time to folk-lore, and the last two chapters are evidently written *con amore*. They contain, however, little that is new, as the appearance of the admirable Kobunsha Fairy Tale Series has anticipated their information. Dr. Brauns seems not to be aware of the publication of these attractive little books.

THE LATEST TELEGRAPH CODE.

COMMERCIAL telegraph codes continue to be improved, especially in regard to elaboration of detail and economy of expenditure in the transmission of messages. The latest addition to these valuable works has just been issued by Mr. T. H. Box, of this port, and is intended for the use of firms engaged in the export of silk handkerchiefs and manufactured silk and crape piece-goods of every description. It is in folio form and contains 80 pages, and about 50,000 words, but by an ingenious arrangement of terminations is brought to the equivalent of 150,000 words. It is extremely simple in working, and provides for every description of material manufactured in Japan, giving under separate headings, very distinctly arranged, all the lengths, widths, weights, qualities, and quantities known in the business. The work, which will be found indispensable to all engaged in this branch of the export trade and their agents and

customers abroad, is published at a very moderate price, is well printed on good paper and strongly bound.

INFERIOR POSTAL STAMPS.

THE recent issue of postal stamps by the Communications Department shows an economical disposition as far as mucilage is concerned. Should the buyer of one of these little pieces of paper, which are supposed to have adhesive qualities, carefully lick the envelope, and then apply the stamp, the possibility is that it may stick. There is about an even chance, however, that it may prove recalcitrant, and kick up its heels. If, after purchase, he licks it with his tongue, and so deprives it of some of its virtue, it behaves most viciously. The public must be a long suffering public that will endure licking and stamping of this nature. Moral: let the Communications Department call in the whole vile issue.

THE HIGHER FEMALE SCHOOL, TOKYO.

WE learn that the Misses Prince, who have done such excellent work for some years past in the Higher Female School, Tokyo, will retire from that seminary at the close of the present year, when their contract expires. The valuable services of these ladies, however, are not to be lost to Japan, as they have been invited by some of the highest educational authorities to remain, and have decided to do so. Very flattering acknowledgements have been received by the Misses Prince of the success of their connection with the establishment which they are about to leave, in addition to which they were entertained at a banquet given in their honour.

YOKOHAMA LITERARY SOCIETY.

THE Society held its 84th meeting in Van Schaick Hall, 178, Bluff, on the 12th inst., and was favoured with a short and most interesting lecture on Astronomy, by the Rev. E. S. Booth, who gave many amusing illustrations showing the relative distances of various planets, with their sizes, as compared to the one we inhabit. After an interval of half an hour for refreshments and sociality, the second portion of the programme was proceeded with, which consisted of music, songs, and readings. At the close the President announced that the next entertainment would take place on the 2nd proximo, when the evening will be devoted specially to music and recitations.

S. HILDA'S HOSPITAL.

THE sale of work in aid of S. Hilda's Hospital took place last Saturday at S. Andrew's school-room. The sale was opened by Mrs. Fraser with a few words setting forth the object of the Hospital, and the urgent need of funds for carrying on the work, closing with an earnest appeal for subscriptions to support free beds, which are much needed. The needle-work, a large portion of which had been sent by the friends of the mission in England, was quickly sold, and by the kind patronage of friends, both Japanese and foreign, the sum of \$300 was realised.

SIGNS OF THE NEW YEAR.

THE approach of the New Year is heralded by the appearance of the calendars so widely circulated at that season. The first to arrive is Messrs. Kelly and Walsh's "Imperial English and Chinese Date Book," a very convenient form of calendar which has already done good service in many a study and office in the East, and is always welcome as an old friend.

DEPARTURE OF MR. GREATHOUSE.

MR. C. R. GREATHOUSE, lately United States Consul-General at Yokohama, and recently appointed adviser to the Korean Government, left on Friday by the *Yamashiro Maru* for his new field of work. Mr. Greathouse's popularity in Yokohama was strongly evidenced by the cosmopolitan character of the attendance at the farewell dinner given to him, but if further confirmation were required it was found in the large

company who gathered at the Haloba to see him off. Among those present were Governor Asada, Mr. Mitsuhashi, the local Superintendent of Police, the Marquis Nembrini-Gonzaga and others.

THE P. AND O. STEAMER "HONGKONG."

WITH reference to the reported wreck of the homeward bound steamer *Hongkong*, the Agent at this port knows nothing, and there is consequently a ray of hope that it may be founded on a rumour which is incorrect.

ORDINATION.

TO-MORROW, Sunday, Dec. 21st, the Bishop of the Church of England in Japan will hold an ordination in S. Andrew's Church, Shiba, to admit Mr. W. T. Austen of the Seamen's Mission to the Order of Deacons. Morning prayer will be said at 10.30. The offertory will be given to the Seamen's Mission.

THE REV. DR. MEACHAM will preach on Sunday morning in the Union Church, when the subject of his discourse will be—"The End which Christ had in giving Himself for us."

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

THE greatest events of the week have been the speeches delivered in the Lower House by the Ministers of War, of the Navy, of Education, and of Foreign Affairs, in response to the interrogations of Mr. Arai and some thirty members of that House. How these speeches have been received by the people, as reflected in the press of the capital, will be dealt with later on, so as to place before our readers the latest utterances of the vernacular journals on this subject. Meanwhile, we turn to what the Tokyo journals say about some of the more important of the questions now engaging the attention of the Diet, namely, those relating to the postponement of the date for putting the Commercial Code into operation, to the Budget, to the reduction of public expenditures, and so forth.

The Bill relating to the postponement of the operation of the Commercial Code, introduced by Mr. Nagai Matsuemon, was passed in the House of Representatives by a large majority on the 16th instant. The date fixed in the Bill is the 1st of January, 1893, when the Civil Code is to come in force. This resolution of the people's Representatives is applauded by almost the whole press of Tokyo. The *Tokyo Shimpō* is, so far as we know, the only paper that has expressed faint disapproval of the conduct of the Lower House in this matter. But as to the mode of procedure adopted, the action of the Representatives has not escaped criticism. The *Mainichi Shimbun*, for instance, is of opinion that, though the provisions of law fall within the scope of the Diet's legislative power, the promulgation and carrying out of the laws are prerogatives of the Emperor, and that since the date for putting the Commercial Code into operation is specially mentioned in the preamble to that Code, the Diet has no right to alter the preamble by any exercise of its ordinary legislative power. The preamble says:—"We hereby give our sanction to the Commercial Code, and order it to be promulgated. We also order the said Commercial Code to be put into operation from the 1st day of the 1st month of the 24th year of Meiji." The *Mainichi* maintains that the date having been thus fixed in the preamble, the Bill, if it has obtained the approval of the Diet,—our readers will note that we quote remarks penned before the passing of the Bill,—may be rejected by the Government on this ground, and in that case the Diet will be placed in an extremely awkward situation. Our contemporary, therefore, advises the Diet to take some method of expressing its views other than by passing a special Bill. The Representatives may make known their wishes either by memorializing the Government or addressing the Emperor. They are recommended to adopt the former method,

because the latter ought not to be employed except in extraordinary cases.

The *Yomiuri Shimbun* devotes two articles to the purpose of exposing the fallacy of the argument employed by the paper just quoted. The *Yomiuri* admits that it is the prerogative of the Emperor to order the carrying out of laws, but questions whether it be also his prerogative to fix the date on which any law is to go into operation. In all the projects of laws thus far introduced in the Houses of the Diet by the Government, the dates of carrying them out are mentioned in one of the articles in the body of the laws. From this circumstance, our contemporary concludes that the Government does not consider the Diet incompetent to fix the date when a law shall come into force. Moreover, the contention that the Diet has no such power leads to very absurd consequences; for then the Government might, if such a course suited its convenience or caprice, defer for any length of time the carrying out of a law passed by the Diet.

The *Jiyu Shimbun* heartily approves the action of the House of Representatives on this question.

The *Kokkai* also supports the Bill. Our contemporary, though originally an advocate of the codification of the laws, approves the action of the House of Representatives on two grounds; first, because the Commercial Code, being the work of only a few legal experts, contains provisions difficult to comprehend, and antagonistic to existing business customs; and secondly, because it would be extremely inexpedient to enforce the Code as originally intended in the face of the universal complaints of men of business, of legal practitioners, and of the community in general, to say nothing of the opposition of an influential section of officials. As to the provisions which relate to bankruptcy and to companies, the *Kokkai* thinks it expedient to make the necessary revisions and carry them out as separate laws earlier than the rest of the Code.

What will be the fate of the bill in the House of Peers? Most persons seem inclined to think that the Upper House will concur with the Lower House's decision. The *Chusai Nippo*, Viscount Torio's organ, is very glad that the Lower House has so far appreciated the tendency of public opinion as to pronounce in favour of the postponement of the date of the Commercial Code's operation. The Conservative paper believes that the members of the Upper House are not so unwise as "to suffer the Japanese people to be experimented upon with a code which is based, not upon the national customs of the country, but upon the customs of foreign States, and which, moreover, has been enacted in obedience to diplomatic necessity." There are, our contemporary goes on, many ex-Senators in the Upper House who are staunch opponents of the Code, while most of the other members of that House are also reported to be opposed to the carrying out of the Code on the date at present fixed. Should the Peers pass the Bill, our contemporary believes that the Emperor will not depart from his usual gracious custom of granting the wishes of his beloved subjects.

The Budget is now under the consideration of a Committee consisting of sixty-three members of the House of Representatives. It is not yet known whether or no the Committee will be able to report the results of its researches to the House before the end of the year; but the papers report that certain members of the Committee have under contemplation drastic changes in the Organization (*Kwansei*) of the Departments of State and in the salaries of officials, the amount to be thus saved being estimated at from five to six million yen. It was at one time reported that the Committee, at least some of its members, advocated the abolition of the Departments of Education, of Agriculture and Commerce, and of Communications. The scheme now announced in the papers does not go so far, but several bureaux are to be abolished

Original from

in every Department, while the salaries of officials are to be reduced by about twenty per cent.

The *Kokumin Shimbun*, writing previously to the public announcement of the above mentioned plan of reduction, indicates a manner in which the items of expenditure in the Budget may be reduced. Premising that the bitterness of the impending struggle between the Government and the Opposition over the Budget may easily be imagined, when it is remembered that the fate of the Budget will determine the relative position of those in power and those out of power, our contemporary proceeds to examine the particular items of expenditure that may be reduced. It observes that the salaries of officials, amounting in all to 19,291,292 yen, may be cut down by twenty per cent. or 3,858,258 yen. The item of miscellaneous salaries, 1,985,757 yen in amount, should be decreased to 1,000,000 yen. Other items to be reduced are office expenses, (3,363,502 yen), travelling expenses (2,074,558 yen), secret service fund (270,152 yen), pay of persons on the retired list (174,603 yen), subsidies to steamship companies (850,000 yen), the salaries of Privy Councillors (140,000 yen), the expenses of the Metropolitan Police Board, and so forth. The aggregate amount of reduction to be effected in the items thus far mentioned reaches about ten million yen. In conclusion the *Kokumin* exhorts the people's Representatives to carry out their financial reforms boldly and without fear.

The *Yomiuri Shimbun*, reviewing the Budget, states that it indicates much care and research on the part of the officials engaged in its compilation. "But," says our contemporary, "however plausible the Budget may look, the Diet will not be satisfied with it, and it is our hope that the Diet may not be too easily satisfied with it. The decision of the first Diet on the Budget will become a precedent for future reference, and it is consequently important that whatever items admit of reduction should be decisively cut down without any regard to personal consideration (*jōjitsu*). But it is equally important to bear in mind that to attempt reduction where reduction ought not to be made is as bad as to pass over items which ought to be decreased. The Diet should consider these two phases of the question and proceed in a fair and impartial manner."

As to the above mentioned financial reforms proposed by some members of the Committee on the Budget, certain leading papers, notably the *Nichi Nichi Shimbun* and the *Toyo Shimpō*, question the constitutionality of the course contemplated, and apprehend that serious and highly undesirable consequences will follow the adoption of such a plan on the part of the Diet. Article 10 of the Constitution provides that "the Emperor determines the organization of the different branches of the administration and the salaries of all civil and military officers, and appoints and dismisses the same." The *Nichi Nichi* cites this article and warns the proposers of the scheme above alluded to that they are contemplating a course which interferes with the prerogatives of the Emperor, and which, consequently, may possibly lead to the dissolution of the Diet. They are advised to adopt some other method of accomplishing their object. They may, without fear of exceeding their functions, declare their inability to vote for the Budget unless so many million yen are reduced in the aggregate, and they may request the Government to recast the Budget on that basis. Another thing about which the *Nichi Nichi* entertains serious apprehension is that the House of Representatives may offend the Peers by its ostentatious zeal to be independent of the other branch of the Legislature upon the question of the estimates. The consequence of such an attitude on the part of the Representatives, may be the rejection by the Peers of the amendments sent up from the Lower House. In such a case, there will arise a contingency provided for in Article 71 of the Constitution, which says that "when the

Imperial Diet has not voted on the Budget, or when the Budget has not been brought into actual existence, the Government shall carry out the Budget of the preceding year." Our contemporary, therefore, hopes that the Representatives will be prudent and sagacious enough to avoid any of the disastrous consequences above described. The *Toyo Shimpō* writes in the same strain.

The question of reforms on land taxation is discussed by some papers. In fact this has been one of the stock questions of the Japanese journalistic world for the last few years. A motion having been announced in the House of Representatives for the reduction of the land tax, this question will be widely discussed in the press before long, and until then we refrain from reproducing any of the articles now appearing on the subject.

It is now time to speak of the comments made by the papers on the interrogations of Mr. Arai and others, and on the speeches delivered by certain Ministers of State in reply to those interrogations. The report that the challenge of the Representatives had been accepted by the Cabinet, awakened widespread interest and curiosity. From the first, however, the language in which the interrogations were couched was criticised by the papers as too vague and ambiguous to elicit any plain and definite answers from the members of the Cabinet. Indeed, the *Kokkai* of the 18th instant anticipated the answers of the Ministers of State, almost in identical terms. The only question to which this journal attached any importance was that relating to the policy pursued by the Government about the Revision of the Treaties. The *Hochi Shimbun* of the same date spoke of the interrogations in more favourable terms, and observed that Mr. Arai and others had given expression to what had long been present in the mind of every intelligent Japanese. Whatever answers the Ministers might choose to give to these questions, the inevitable effect would be, wrote the *Hochi*, that their answers would be received by the nation as pledges of the Yamagata Cabinet. The public was disappointed by the report that Mr. Mutsu, Minister of Agriculture and Commerce, who is regarded as the most eloquent member of the Cabinet, had declined to answer the interrogation relating to the policy to be pursued in agricultural and commercial affairs, on the ground of the vagueness of the language of the question. And the public, if we may judge from the utterances of the press, has been almost equally disappointed by the brevity and generalities of the speeches delivered by the Ministers of War, of the Navy, and of Education on the 16th instant. But Viscount Aoki's speech, delivered on the 17th instant, though not giving full satisfaction to the public, has, from the nature of the subject dealt with and from the manner of treatment, called forth a large amount of newspaper comment.

The *Yomiuri Shimbun*, writing of the speeches of Count Oyama, Viscount Kaba-yama, and Mr. Yoshikawa, remarks that, considering the responsibility of the positions of Ministers, it is quite natural that they should try to be as simple and concise as possible in their speeches; but that it is, nevertheless, regrettable that the vagueness of their speeches has left the public in as much darkness as before with regard to the policy really pursued by the Government. In short the Cabinet Ministers are declared to be too prudent and timid in their relations towards the Diet. It being thus impossible to have the policy of the Cabinet explained on the floor of the Diet, the *Yomiuri* advises the Ministers to start a responsible organ through which they can ventilate their views without the fear of committing themselves in public.

With regard to the Foreign Minister's speech, the *Nippon* observes that it has been enabled by that speech to know something of

the policy pursued by the present Cabinet in the Revision of Treaties. Our contemporary thinks that, judging from Viscount Aoki's speech, the present Government contemplates (1) the abolition of Consular jurisdiction simultaneously with the opening of the interior for mixed residence; (2) the omission from the treaties of the provisions relating to the ownership of real estate by foreigners; (3) the omission of diplomatic notes as proposed by Count Okuma, and (4) the recovery of tariff autonomy. With regard to tariff autonomy, the *Nippon* remarks that public opinion is now more and more directed to this question. Last year, we are told, attention centred on the question of judicial autonomy, because Count Okuma's programme was judged by the nation to contain stipulations seriously interfering with Japan's sovereignty in matters of justice. But it would be a grievous mistake, says the *Nippon*, to suppose that the nation will support the Government if only the points to which objection was offered last year are all removed or amended in the new programme of Revision. Last year the magnitude of the threatened danger to the judicial independence of the Empire, left little time for the discussion of the economical phase of the question. No programme, however, concludes our contemporary, will be approved by the nation except a programme including the complete recovery of tariff autonomy.

The *Toyo Shimpō*, while admitting the importance of maintaining secrecy about every thing relating to treaties of alliance or to the actual process of negotiations in concluding ordinary treaties, declares it incumbent on the Ministers of Foreign Affairs to acquaint the Representatives with the general nature of the proposals presented by the Imperial Government to the Governments of foreign countries. It also strongly criticizes the assertion of Viscount Aoki that the Revision of the Treaties is not his principal business. Further, referring to his remark that it is important to take care not to offend the feelings of the treaty Powers in conducting the negotiations for revision, the *Toyo Shimpō* says:—"It is of course important to take care not to injure the good will of foreign Powers, but points which have a direct bearing on the future of the country must be contested with foreign Governments, even though such a course should hurt their friendly feelings. The former Ministers of Foreign Affairs made it their principal care not to offend the treaty Powers, and in consequence their programmes contained stipulations injurious to Japan. The Present Minister being desirous of following their example, it is not difficult to guess the character of the policy pursued by him."

The *Kokumin Shimbun* also complains that Viscount Aoki did not explain the points about which his interrogators were most desirous to know his opinions. The *Yomiuri Shimbun* regrets that the Foreign Minister did not concisely state his opinions on the principal points of the interrogations, instead of inflicting on the Representatives a long and tedious dissertation on secondary points.

There are other questions of importance discussed by the metropolitan papers, but space does not allow us to allude to them in detail. The question of the defences of the country still occupies the attention of the *Mainichi Shimbun*, while the augmentation of the Navy is advocated by the *Hochi Shimbun*. The *Fiji Shimpō* continues its interesting essays on the prospects of parliamentary institutions in Japan. Thus far it has been engaged unfolding the history of the gradual development of the liberal movement in the country. The *Hochi Shimbun* discusses the question of an alliance between Japan and China, and sets forth the opinions for and against such an alliance, but does not pronounce a final decision. The *Kokkai*, as usual, writes on various questions relating to the defence and foreign relations of the country. The same paper also writes on the subject of the "Representative system of a yellow coloured Race."

THE PROCEEDINGS OF THE DIET.

WE shall only be repeating something tacitly acknowledged by every one of our readers if we say that Japan is at this moment undergoing a trial, the issue of which must practically settle her claim to rank above the general category of Oriental nations. At the root of the distrust entertained by the foreign residents towards Japan, at the root of their reluctance to commit their persons and properties to Japanese tutelage, lie two things, ignorance, and the fact of Japan's Orientalism. There is no denying, it would be childish to attempt to deny, that the term "Oriental" carries with it a sense of opprobrium. The Oriental is a man of an inferior race in Occidental eyes; a man not fit to be treated as an equal, and still less fit to be entrusted with the discharge of functions involving control of Western persons and Western belongings. It has often been urged that the Japanese is not an Oriental according to this significance of the word, but the plea carries no weight, being addressed to people who know practically nothing of the Japanese, and who, up to the present, could justly assert that means of acquiring knowledge were not easily accessible. What, after all, is the measure of the average foreign resident's acquaintance with Japanese character and Japanese moral competence? To Japanese society, to Japanese domestic life, to Japanese thought, and to Japanese converse he has no access. With commercial Japan his acquaintance is limited to a little section of traders, who, whatever be their recently developed merits, were undoubtedly for a long time regarded with contempt by the respectable classes of their own countrymen. Japanese legal tribunals he only knows through the medium of a class of cases in which he always believes himself to be an aggrieved suitor, and through the medium of laws which undoubtedly provide improper facilities for defaulting debtors. It cannot be laid to his charge that his ignorance is due to his own want of energy, neither can he be greatly blamed if, being ignorant, he has also been distrustful. But the time has passed when the avenues to knowledge were closed to all except devoted students. Japan, of her own choice, is undergoing an ordeal which must be conclusive in many senses, and which takes place in full view of foreign observers. Elsewhere, representative institutions have been slowly and gradually evolved, each stage of their development adapted to a corresponding growth of popular intelligence. Here, they are suddenly called into existence with little if any apparent preparation, and the nation is required to prove its capacity for them by actual practice. It is certainly a tremendous ordeal. Not, of course, by the results of the first Diet's doings shall we be able to decide whether this novel system is fully

suited to Japan's circumstances and capacities. It is more than probable that the electors have not exercised full discrimination in their earliest use of the franchise, and that their future delegates to the legislative assembly may, in many cases, be men of a different type from those now sitting in Uchisaiwai-cho. Still, this Diet may be expected to furnish interesting and almost conclusive data, and what its proceedings will undoubtedly do is to give us such an insight into the character and capacities of the Japanese as we have never before enjoyed. We shall discover whether they are adapted for the task of self-government. We shall see what moral qualities are evoked by the novel problems with which they are required to deal. We shall learn whether they are really gifted with the legislative faculty; in other words, whether the principles of justice and the dictates of impartiality appeal to them effectively. We shall detect whether they have sufficient breadth of mind to grasp the leading features of a question, or whether their intellect tends to lose itself among quibbles and trivialities. We shall perceive whether public duty is honestly recognised by them, or whether personal ambition is their only incentive. We shall find whether they possess the faculties of organization, subordination, and fidelity to a cause, or whether their political parties must be mere cabals and their representative government a patchwork of incongruous elements. Their press has helped us during the past fifteen years to form a limited conception of the bent and range of their genius, but to the vast majority of us their press, in its published form, is a sealed book, and such translations of it as reach us are little more than a weak echo of the original. The proceedings in their Courts of Law would have been most valuable as a test of their judicial capacity, but we know nothing of these proceedings except in cases where, being ourselves suitors, we have had experience, not of the incompetence of their judges, but of the incompleteness of their laws. In short, it is not too much to say that in the story of the Diet's every-day sayings and doings, we find ourselves furnished for the first time with an intelligible and trustworthy clue to the character and capacities of the Japanese. Not the aggregated results, remarkable as they are, of the past twenty years' progress can be weighed against the records of the Diet as a means of teaching the world what Japan really is, and how far she deserves the consideration claimed by her from Western States. Every one, therefore, who has any honest desire to know whether his faith in the Japanese is well founded, or whether his doubts of them are justified, will welcome the detailed report of the Diet's proceedings as a simply invaluable clue. Fortunately the most thorough measures were taken before the Diet assembled to organise a competent staff of short-hand

writers, and a verbatim report now appears daily in the *Official Gazette*. Sometimes, as is the case with all legislative assemblies, the proceedings present few features of special interest, but there has not yet been a day when they failed to justify, in a greater or less degree, the estimate we here place on them. We cannot for a moment conceive that the foreign public would endure to be left without a full translation of the reports. Any indifference on this subject would betray marvellous carelessness about the affairs of the country in which our lot is cast, and would go far to justify the charge sometimes preferred against the foreign residents in the Settlements that they are ignorant of the Japanese, not because they cannot know them, but because they have no wish to know them. This is undoubtedly the crisis of Japan's modern history. She has reached the point where the ways divide in her path of progress, and we have to observe closely which direction she tends to take. Many eyes in Europe and America will also watch her with keen interest; eyes of men who recognise that the experiment she is making ranks among the notable incidents of the nineteenth century, and that its result concerns the world at large, not as a mere problem of constitutional history, but as the crucial stage in the career of the leading nation of the Orient.

AN ILL-STARRED CAUSE.

IT is usually the case with events of importance in this Settlement that a reflected image of them is presented to us four months later, and the reflecting medium being the partial information and cloudy notions of outsiders, the image often appears curiously distorted. We expected that this would be the case with the Meeting of September 11th, and our expectation is amply verified. The *London and China Express*, with becoming docility, has set itself to blazon abroad Yokohama's doings, and Yokohama does not gain much by the process. Even in the presence of other feelings which we shall not attempt to describe, it is impossible to avoid a pang of sympathy with the hard lot of Yokohama's heretofore champions. Coldly indeed for them blows the wind of ingratitude. To be abused is at least exciting, to be attacked is sometimes amusing, and to be denounced is occasionally comforting. But to be ignored altogether, that is in truth bitter. We have never ourselves supposed for a moment that the ranting, railing champions who professed to represent the views of this community, held a commission from anyone but themselves. Nevertheless, we confess that we overrated the probable effects of their clamour and persistence. We were not prepared to find that the outer world did not even acknowledge

their existence, and that their useful functions as directors of public opinion might be measured by the tail of the proverbial *Manx cat*. Such is the fact, however. This community, we to-day learn, has hitherto been without any sort of mouth-piece. It has had nobody to fight for it; nobody to correct the falsehoods told about it, and nobody to state its case. The irony of fate is sometimes marvellously keen. The man who at the meeting of the 11th of September, received and obeyed the mandate of the promoters to proclaim Yokohama's forlorn condition and to tell the community that they were without anything resembling a worthy public representative, this very man had for years been proclaiming himself as the one and only competent exponent of his fellow residents' views and champion of their interests. It is pitiful that he should have been compelled to make a suicidal confession at the eleventh hour, and it is even more pitiful to find, as the *London and China Express* tells us, that outsiders accept his confession without a word of protest. Yokohama, in short, has hitherto been entirely without an anti-Treaty-Revision mouth-piece, and the effects of her silence are now lamented all too late.

But if silence has cost the anti-revisionists dear, speech does not seem to have served their purpose better. At all events, the speeches made at the meeting on the 11th of September have not enabled their friends to understand the situation. The leading agitators explained that last year, when one great Power after another was giving its consent to Count OKUMA'S proposals for Treaty Revision, Yokohama made no move because it was well persuaded that Great Britain's consent would never be secured. Yokohama in fact was just as much opposed to last year's scheme of Revision as it is to this year's. So at least said the Yokohama's agitators themselves. But in the reflected image of Yokohama's proceedings we find that the agitators object, not to both schemes equally, but to the difference between them. They were with Count OKUMA; they are against Viscount AOKI. We have more than once pointed out that the statement of their own views made by the agitators left the public in a state of exceeding doubt as to what really was objected to and what really was intended. But we were not prepared to find, despite this great obscurity, that their ingenious explanation of their silence last year in the presence of an imminent catastrophe would fall upon entirely deaf ears, and that their new champion, the *London and China Express*, would represent them as having been last year in agreement and this year in opposition. Evidently some very mischievous fate has been entrusted with the control of this Settlement's anti-Revision champions. After having occupied the lists noisily for

years, their most stubborn leader is obliged to stand up and publicly confess that he and his followers have had no existence whatever, so far as useful results are concerned; and now, when an apparently influential effort is made to supply this unhappy deficiency, the immediate issue is renewed misunderstanding, increased misrepresentation, and intensified confusion. Truly something is amiss in this little Anti-Revision world of ours, and that it will ever be unriddled we begin to feel hopeless.

Apart from the muddle it produces as a reflecting medium, the *London and China Express* is delightfully nebulous on its own account. It takes a great deal of pains to show that Japan lost credit by the proceedings of last year. Indeed it goes so far as to call her change of front an "utter and undignified fiasco." There is no denying that when a Power recedes from a position voluntarily taken by itself, its steadfastness of purpose is seriously impugned in the eyes of the world. This is what happened to Japan last year, and she must take the consequences. But such things do not happen to Japan alone. We need not travel beyond the records of Great Britain herself, nor need we go farther back in those records than fifteen years, to discover a case where a treaty proposed by England and concluded by her Plenipotentiary after months of negotiation, was finally rejected because the British Chambers of Commerce did not like it. By the light of this precedent we do not find it so heinous that Japan should have altered her proposals in deference to a wave of popular agitation such as no Government could afford to despise. The *London and China Express*, with pretty naïveté, declares that Japanese public opinion is nothing to Western statesmen. Nothing indeed! What then is something? At this side of the water we are constantly assured that public opinion in Japan is not really moved by the topic of Treaty Revision, and that the problem may very well be left for solution at the Greek Kalends. At that side we are told that Japanese public opinion does not matter two straws, and that Western statesmen have nothing to do with it. There is no word to describe the mental condition of journals like the *London and China Express* in regard to this matter. Their writings are a mixture of frivolous chatter and stupendous ignorance. The most prominent and important point of difference between the situation in Japan to-day, and the situation 5 years ago is that, whereas her statesmen were then able to direct intelligent public opinion and to ignore that which was not intelligent, they are now obliged to pay to both classes the same deference that the views of a nation in civilized Europe receive at the hands of its Government. This is where the Japan of 1890 presents such a strong and striking contrast to the Japan of 1885, and anyone who fails to appreciate the change

must be indeed a blind reader of contemporary annals.

But even though this salient fact had not penetrated the crass atmosphere of the *London and China Express'* perception, it might still have avoided the silliness of asserting that national opinion is a quantity of no account in international compacts. A lively stretch of imagination is needed to conceive the reception the House of Commons would give to a Foreign Secretary who should rise in his place and declare that in negotiating a treaty with Japan, British statesmen are not required to take any account of Japanese public opinion. Truly this Anti-Revision campaign abounds in marvels. Long ago we imagined that the limit of startling surprises had been reached. But when a performer like the *London and China Express* steps into the arena, the farce recommences in a new and unanticipated direction. There is little occasion, we imagine, to pay attention to our esteemed contemporary's statements of fact, seeing that its deductions and arguments so far exceed the bounds of ordinary intelligence. Yet Yokohama must have learned with a gasp of relief how narrowly it last year escaped an irreparable calamity. Actually while it was hugging itself in the belief that whatever Germany, Russia, or the United States might do, Great Britain at all events would stand firm—actually while it was hugging itself in this belief, and remaining confidently silent, Great Britain, according to the *London and China Express*, was "on the point of signing" the obnoxious Treaty. It was a narrow escape, and instead of abusing Japan for suspending the negotiations, we should be exceedingly grateful that she thus afforded us an opportunity to break a silence which might have sealed our fate for ever. People who saw clearly behind the scenes last year, believe that England's hesitation was the real crux of the situation, and that had she acceded at a tolerably early stage, public opinion in Japan would never have attained embarrassing dimensions, nor would the Tokyo Cabinet have thought of revising its proposals. But this is evidently a misconception. The *London and China Express* has spoken, and History must be re-written.

ECONOMICAL PROBLEMS.

NOW that questions of nationality have lost their acute character and are in fact slowly passing away, economical and social problems loom up on every side and refuse to disappear at the voice of the charmers, charm they never so wisely. One of these problems, how the vast resources and the growing wealth of the New World will finally affect the commercial and agricultural systems of Europe, is, owing to the MCKINLEY Tariff, a theme at present more freely discussed than formerly. Yet the question had always been in the minds of thoughtful men long before

recent legislation gave it a temporarily more prominent character. Some seven years ago the Prussian Government ordered Dr. M. SERING, of the University of Bonn, to investigate the causes and probable effects of North American and Indian competition upon the economic condition of Europe, and with the consent of the then Crown Prince, who took as great an interest in economic questions as he did in war, science, and literature, the money necessary for this inquiry was drawn from the FREDERICK WILLIAM-VICTORIA Funds.

Dr. SERING accordingly visited Canada, the United States, and the more important parts of South America, in order to discover how far and how long the resources of these countries might be expected to compete with those of the old World. What Europe had suffered was beyond doubt, and recent reports enable us to gauge with some accuracy the extent of the changes brought about by this competition. In the United Kingdom the continually falling prices of cereals have, according to statistics lately published in *The Times*, led to a signal reduction of the corn and green crops area. In 1869 of every 100 acres cultivated, 8.7 were in wheat; in 1889 only 5.3, a decline of 3.4 acres, with correspondingly diminished percentages for barley and oats. Rotation grasses and permanent pasture showed a more than proportionate increase, especially in Ireland, where over four-fifths of the country is in grass, a change that could not, however, fully counteract the loss otherwise sustained. These changes in cropping have during the last twenty years extended the cultivated area of Great Britain by 2,394,079 acres, but this otherwise satisfactory increase is poorly proportioned: corn and green crops show a decline of two, grasses an increase of over four and a half, million acres. The hope of stable and normal prices, now that the world forms one vast corn market, has also not been realized, and between 1877 and 1886 a heavy fall all round was experienced, the over-supply from abroad preventing a rise when the home crops were poor, while good harvests naturally caused a further and ruinous decline. Germany, too, found no compensation for the crop failures of 1875, 1876, 1877, 1879, and 1880; all her agriculturists were bitterly disappointed by the steady decline of the market, and the farmers in her northern districts could scarcely meet their financial obligations. In France, Austria, and Italy the low price of wheat is in like manner the chief cause of the present depression, and thus the question as to the future is everywhere one of the most vital importance. On it, according to Dr. SERING, depend the further cultivation of the soil of Europe, and a possible social displacement that may shake the national organism of Germany to its very foundation. On this

point, however, Dr. SERING is optimistic and, as he thinks, with very good reason. America, and India also, might produce still more in the future, and the prairie lands might by railways be brought into still closer connection with the Atlantic sea-ports, but it must, according to our authority, be borne in mind that the conditions of settlement in the United States have with every year become less favourable; that the soil, now mostly in the hands of private owners, has greatly risen in price; that the land still available is either poor or, owing to climatic conditions, difficult to cultivate; that the immigration of agriculturists is less rapid and numerous; that the increasing population consumes a larger percentage of the products of the country; that at normal rates the raising of corn and other cereals yields at best but small returns; and finally, that the low prices, together with the appreciation of the land and the consequently higher rent, have led to a reduction of the corn area not merely in the United States but in India, Russia, Chili, Argentina, and Australia as well. One event, and one event only, could retard the speedy coming of a better time for the tiller of the soil: the sudden opening up of new and remote but very fertile wheat districts by means of cheap and easy communication with the great commercial centres of the world, an event not likely to take place suddenly, and unlikely to prove a disturbing factor in the remedial process now at work.

The present depression, then, the joint result of the rapid colonization of very fertile parts of the world and of the unprecedented facility of communication, finds its remedial features in the facts that the crisis has affected all corn producing countries in a very similar manner; that it has equally shaken the economic foundations of agriculture in every civilized nation (witness for instance the Farmers' Alliance in the United States), and that the colonization of every part of America is attended with an annually increasing outlay of money and labour, as is evident from the proposed irrigation works west of the Mississippi. The present depression being merely temporary, Germany's protective tariff can, in Dr. SERING'S opinion, be only justified as a transient measure of self-defence: should the low prices of cereals continue, then the general depreciation of her agricultural property could be averted only by a permanent but finally unendurable taxation of all other interests. As it is, the taxing of the people's bread is always a serious measure, but if a merely temporary resort to such a policy can permanently save the most numerous and representative class of the nation, the State should not shrink from making the sacrifice. Whether when prices rise again the few but powerful land owners of

Northern, and the numerous but well united small proprietors of Middle and Southern, Germany will follow Dr. SERING'S advice and consent to a lowering or abolition of the present duties, is perhaps problematical; but that Great Britain, despite HOWARD VINCENT'S call for protective measures, will maintain her present fiscal policy is undoubtedly certain, for according to *The Times* she is now in a much better position to compete with the United States in every foreign market, than she was some years ago, and if prices beyond the Atlantic continue to rise at their present rate, the prospects even in the States are not at all unfavourable, while the difficulties raised by the new tariff are nothing new in themselves, and have on a smaller scale been overcome in the principal European countries as well as in most of the self-governing British colonies.

IMPERIAL PARLIAMENT.

[VERBATIM REPORT]

HOUSE OF REPRESENTATIVES.

THURSDAY, DECEMBER 4TH.—(Continued.)

THE COMMITTEE ON QUALIFICATIONS.

Mr. WAKI YETARO, having explained that he had some suggestions to make about the Committee, ascended the rostrum and said—Mr. Suyematsu Saburo has moved that certain steps should be taken with reference to the arrest of Mori Tokinosuke, and a decision is now about to be given on the subject of a Committee. I beg to say a few words on that point. The Rules provide that a Special Committee must consist of at least nine members, but I wish to propose that the Committee we are now about to elect should number eighteen. As the Committee has to be elected in equal proportions from the various Sections, this would give two members to each Section. Doubtless there are various opinions on the subject of Committees, but I trust that the House will consent to this without discussion.

Mr. ORITA KENSHI—Allow me to make an inquiry. We have just come to a decision about a Committee, but I do not understand what the Committee is for. Is it to enquire into the causes of Mori's arrest or into the offence which led to his arrest? I do not in the least understand what the Committee is for. I have to apologise for making these remarks after the House has voted, but as they have reference also to the election of the Committee, I trust that an explanation will be given.

Mr. SHIMIZU SANZO—I understand clearly what the proposal of Mr. Suyematsu is. The Committee is to take proper steps for communicating with the Judicial Department on this subject. On looking at the Orders of the Day, I find that the election of the Qualifications Committee is the second subject. It is therefore necessary that we should first of all change the Orders of the Day, in accordance with the 82nd Article of the Rules of Procedure. Otherwise the regularity of the House's proceedings cannot be preserved. The Orders of the Day are published in the *Official Gazette* and known throughout Japan. A Qualifications Committee is provided for in the Law of the Houses, and in the Rules of this House, and I see no reason why we should elect the Committee now proposed. The second item of business for to-day is duly fixed in the Orders which have been distributed to all the members, and if we do not carry out the programme we shall be violating the rules. I think we had better erase No. 2 in the Orders of the Day, and entrust the duty of determining qualifications to the Committee now proposed.

Mr. MATSUTOMO KANAYUKI—I myself had intended to make the same proposal as has been made by the member who has just sat down. The Qualifications Committee must be elected under the Rules, and I think we should proceed to its election.

The PRESIDENT—If you wish to speak about the election of that Committee, please wait a moment.

Mr. SUYEMATSU SHIGETASU—Various opinions

are entertained about the Committee. Some say it ought to be elected by the Sections; others, that we need not elect it at all on the present occasion. I myself am of the opinion that there is no need of so large a number as eighteen. I think that nine will be sufficient, and it would be well if the President selected men of legal attainments to form the Committee.

Several members expressed approval of this proposal.

The PRESIDENT—Mr. Suyehiro's proposal has found supporters and therefore comes before the House. Those who agree with his proposal will please stand.

A majority rose.

The PRESIDENT—The proposal is carried.

Mr. OKAYAMA KANEKICHI—I wish to ask a question. I understand that the proposal of Mr. Suyematsu is to be acted upon. Am I right, Mr. President?

The PRESIDENT—Yes.

Mr. OKAYAMA—Then this House has decided that Mori Tokinosuke has been declared by this House to be unconstitutionally held in detention. If that is so, his case is different from that of a member absent through sickness, or some other unavoidable reason. He was in fact illegally prevented from exercising his right of election at the time of the appointment of the President and Vice-President. Is not the appointment of these officials affected by his absence.—(Cries of "Unnecessary.")

The PRESIDENT—The President was elected by the vote of the majority.

Mr. SHIMIZU SAKZO—Is there no change in the Orders of the Day?

The PRESIDENT—We will consider that afterwards. I proceed to name the Committee, according to the wish of the majority of the House:—Messrs. Suyematsu Saburo, Ayai Taken, Inouye Kakugoro, Suyehiro Shigeyasu, Misaki Kamenosuke, Sakura Kanji, Suyematsu Kencho, Yendo Shuker, Mayeda Kagashi. These nine names will form the Committee.

Mr. SUYEMATSU SABURO—The Committee which you have just named wish to retire to the Committee-room of the House and commence their business. Am I right in supposing that this will be in accordance with the wish of the House?

The PRESIDENT—The House has heard the member's question—

Mr. INOUE KAKUGORO—I understand the motion just made to mean that the Committee should come together at the time of the House's closing. I do not see any occasion to put that question to the House.

Mr. SUYEMATSU SABURO—Not so. The proposal is that the nine members of the Committee should retire to the Committee-room while the House is in session and carry on their business there.

Mr. INOUE—In that case, as I have still matters to submit to the House, and as I am willing if I become a Committee man to sit up half the night, or even all night, I must object to leaving the Chamber at present. I cannot agree to forfeit my privilege of sitting in the House for the sake of conducting the duties entrusted to the Committee.

Mr. TAKAGI MASATOSHI—I am of the same opinion as the member who has just spoken. If the business of the Chamber is to be interrupted while Committees are at work, I do not see how the duties of the House can be discharged.—(Cries of "Unnecessary.") and "The business will go on all the time.")—Therefore I desire the Committee to commence its duties after the Chamber has closed.

The PRESIDENT—Under these circumstances, I shall proceed with the business of the House. The next business is the election of a Qualifications Committee. I have here certain questions to be submitted to the Committee, and its immediate election is desirable.

Mr. KUDO KOKAN—You have just stated, Mr. President, that there are certain questions to be submitted to a Qualifications Committee. May I ask to whom these questions apply?

The PRESIDENT—They apply to members of the House, and have been presented through members of the House for the consideration of the Qualifications Committee.

Mr. MATSUMOTO KANAYE—A short time ago a member made some remarks (with which I agree) about the Orders of the Day. They were to the effect that the proper routine has been seriously departed from. Even if no departure had been made from the routine in respect to the Qualifications Committee, what the President has just stated with respect to questions propounded as to the qualifications of members seems to call for notice. The 78th Article of the Laws of the Houses provides that "when an objection is raised in the House of Representatives as to the qualifications of any of its members, a special Committee shall be appointed to examine into the matter upon a specified day, and the resolution of the House shall be taken upon the receipt of the report of the said Committee."

With relation to the announcement of the President, I wish to enquire what objections have been formulated as to the qualifications of members.

Mr. KUDO KOKAN—I understand you to say, Mr. President, that objections have been raised to the qualifications of some of the members. Unless we know to whom these objections apply, it is difficult for us to elect a Committee. As has just been pointed out, it seems advisable that you should give us accurate information about these objections.

Mr. KIKUCHI KANJI—I think the point raised by Mr. Matsumoto is very proper. From what you have just said, Mr. President, I understand that these objections are raised, not by members, but by persons introduced by members. Now the Law of the Houses speaks of objections raised in the House of Representatives, and again, in the Rules of Procedure, I find it stated that when an objection to the qualification of a member is raised by one of the members, he must submit the objection in writing in duplicate over his own signature to the President. If questions as to the qualifications of members are to be received from outsiders and submitted to a Committee, there will be no limit to the process. Moreover, as the friction of parties increases there is no knowing what numbers of objections may not be submitted. It is impossible that we should be expected to elect a Committee on account of each of these objections, and it therefore seems to me unnecessary to entertain any objection not contemplated by the law of the House and the Rules of Procedure,—namely, objections arising in the House itself and from the members. I therefore oppose the election of the Committee now announced by you, Mr. President.

The PRESIDENT—Am I to understand that you second Mr. Matsumoto's proposal?

Mr. KIKUCHI KANJI—Yes.

The PRESIDENT—Then I have a question to put to Mr. Matsumoto. Messrs. Saito Kanshiichi and Takeishi Keiji, themselves members, have submitted objections. I apprehend, therefore, that this is an occasion for electing a Qualifications Committee, and for that reason I have brought the matter before the House without loss of time.

Mr. MATSUMOTO KANAYE—Whether put forward through the medium of one or two members, the objections come from outsiders and are valueless. Unless by a decision of the House itself, I am persuaded that a Committee cannot be elected. Such is the Law of the House. It speaks of objections raised in the House of Representatives, and therefore it must be an objection by the House collectively or no effect can be given to it.

Mr. OYE TAKU—I agree with Mr. Matsumoto Kanaye. The President cannot proceed to the election of a Committee upon the application of one or two persons. The House must be agreed. I must therefore that the President will revoke his last announcement.

Mr. YAMADA TOJI—According to the 67th article of the Rules of the House, to which Mr. Oye has just alluded, it is distinctly provided that in the event of a representation being made by a member with reference to the qualifications of a member, such and such a course shall be pursued. From this I conclude that whatever may be the case with respect to applications from members, a representation from outside the House, although supported by the introduction of a member during the session, should not be submitted to a Qualifications Committee. I hope, therefore, that the President will withdraw his announcement.

Mr. TAKEISHI KANJI—Considerable discussion has arisen about my representation. I desire to explain that my application was presented in accordance with the 3rd chapter of the Rules of the House. It is there provided that a member desiring to raise a question about the qualifications of another member, must hand to the President a written statement in duplicate, duly signed, setting forth the grounds of his objection, and that the President must submit this statement to a Committee on Qualifications; a copy being also handed to the member whose qualifications are impugned, and he, by a fixed day, is required to send in an answer. The course I have taken has therefore been in accordance with the Rules, and it seems to me perfectly regular that the President should appoint a Committee on Qualifications.

Mr. KIKUCHI KANJI—I think there is some misapprehension about the facts in this case. The announcement made by the President a few minutes ago referred to applications made by persons introduced by members, is not that so?

The PRESIDENT—Yes.

Mr. KIKUCHI KANJI—Then there has been no misunderstanding. The objection has not been raised by members.

The PRESIDENT—Mr. Kikuchi, I have it here in writing as follows—We beg to present these objections—

Mr. KIKUCHI—Is it an application submitted by two members?

The PRESIDENT—Yes.

Mr. KIKUCHI—Then the facts are different from those of your previous announcement. That is evident.

Mr. YAMADA TOJI—It appears from the answer the President has just made to Mr. Kikuchi, that an objection has been sent in by a member. The House previously understood that it was an application from persons introduced by a member. So soon as there is question of an objection raised by a member, a Committee must be elected. Would it not be well for the President to make a plain announcement to that effect?

The PRESIDENT—The document shall be read to you.

By direction of the PRESIDENT the SECRETARY read as follows:—Therefore we have the honour to enclose a copy of the finding of the Local Court of Aikita as evidence, and to submit our objection.....

Dated December 2nd 23rd, Meiji. Signed by Saito Kanshiichi and Takeishi Keiji, and addressed to the President of the House of Representatives.

Mr. SAKAKI YOGA—It has been stated according to the Rules of Procedure and the Law of the Houses, that the election of a Qualifications Committee must depend upon the decision of the House. But the provisions of the Rules of Procedure by no means enact that a decision of the House is required. Two members or even one member of the House may formulate an objection, in which case a committee must be appointed to take the facts into consideration. This is quite plain. On looking at the Rules of Procedure of this House, I find it stated in the 67th Article, that if a member raises an objection to the qualifications of another member, such and such procedure shall be taken. From this I conclude that the appointment of a Committee does not depend on a decision made by the House itself only. Consequently Messrs. Saito and Takeishi, in formulating their objection to certain members' qualifications, have acted in accordance with the Rules, and a Committee on Qualifications must undoubtedly be appointed. I think the House will agree that this is the proper interpretation of the Rules.

Mr. NAGATA SADAYEMON—I think the appointment of a Committee is the proper course. The President spoke a short time ago of people introduced by members. If the application is from persons introduced by members, it does not come within the provisions of Article 67. But seeing that the application is from Mr. Takeishi, it is in no way opposed to the 67th Article. I think it quite in order that the President should announce the election of a Qualifications Committee.

Mr. NASUGAWA MITSUZANE—The President's announcement has given rise to various arguments, but we are now agreed that there is no difficulty about proceeding under Article 67. I propose therefore that the election of the committee be undertaken at once, and that the election shall be made by the Sections in accordance with the 2nd clause of Article 63.

Mr. SUYEMATSU KENCHO—There has been much discussion about this Committee, but I find that I am quite in the dark as to the nature of the Committee. There was something about a Qualifications Committee in the original Rules of Procedure, but it was erased, and we must clearly understand that the Committee now contemplated is not the Committee spoken of by Article 42. It is, I judge, a Special Committee. But if a Special Committee, then the business to be entrusted to it must be known. At present no limit has been fixed with regard to the functions to be exercised by the Committee, and we have consequently nothing to guide us in the election. Further, you cannot speak of electing a special Committee unless something has occurred in the House which you desire to submit for the Committee's consideration. It is impossible to proceed to the election of a Special Committee merely on the ground that we are to elect committee men. We must first have a reason, and then it must be decided whether that reason warrants or does not warrant a Special Committee. Unless these steps have been taken, the procedure is inconsequent.

Mr. IMAI ISOTCHIRO—I agree with Mr. Suyematsu. If we are to appoint the Committee at once in consequence of Mr. Takeishi's application it would be better to have a permanent Committee on Qualifications vested in with competence to consider such questions. If we do not adopt that plan, but proceed to elect a Special Committee, we must know exactly what we are electing it for. I think therefore we should be informed about the subject of this application.

Mr. MISAKI KAMENOSUKE—I wish to say a word. The Rules of Procedure provide for a Permanent Committee on Qualifications, and in a case like the present, if we elect a Special Com-

mittee, the subject of its investigations must, as Mr. Snyematsu has just said, be fixed, or confusion cannot be avoided, since the limits of the Committee's functions would be quite indefinite. I am acquainted with the grounds of objection and I would explain them to the House, but if the names of the members against whose qualifications objections have been made are known, it will be like deciding a case and appointing a court to try it afterwards. This might greatly complicate the task of examination. In common with the whole House, I may say that this question of qualifications should be wholly unconnected with political parties, and decided simply on its own merits. If you have a Special Committee and if you define the business to be intrusted to it, you will be confronted by the anomaly of having a prejudiced court, and it will be difficult to secure impartiality. It seems to me, therefore, that it will be better for the House to proceed in accordance with the latter part of Article 42, where it is laid down that the House may appoint a Committee if it thinks proper, in accordance with the motion of a member. We are confronted by a considerable difficulty, and I deem it rather fortunate that this case has arisen, because it may lead to the appointment of a permanent Committee on Qualifications, a measure for which I would bespeak your approval.

Mr. SHIMIZU SANZO—We appear to be coming within reach of an understanding. I think it very undesirable that any change should be made in the Orders of the Day, and I have therefore expressed my approval of Mr. Misaki's remarks with regard to this election of a Qualifications Committee. The Orders of the Day are settled and announced by the President, and in accordance with them the procedure of the House is regulated. This method is open to the objection that the President is entirely at liberty to decide in what order the House shall proceed with its business. Be that as it may, however, the question which, in consequence of a change in the Orders of the Day, now comes before the House, is of great importance. If the House itself is to decide what member has such and such qualifications, and what member has not, there is no occasion for a Qualifications Committee. The 67th Article of the Rules of Procedure has been wisely enacted with a view to this contingency. The object of its provision, that in the event of an objection being raised to the qualifications of a member, a Committee must be appointed to examine into it—the object of this provision is that the strictest privacy should be observed until the Committee has investigated whether or no the member is qualified. The rule is framed for the protection of members. We must have a Qualifications Committee as Mr. Misaki suggests. With respect to changing the Orders of the Day, some members are in favour of doing so. If we accede on the present occasion, I think that in future the Orders of the Day should not be dependent upon the President's will. Of course with regard to a question that has already been brought before the House or in respect of a Bill, there is no difficulty. But in either of these cases I think it would be better that the President should not be allowed to decide the Orders of the Day according to his own ideas.

Mr. SOMA SHUKU—Various opinions have been expressed in reference to this Qualifications Committee; but my view is that the election of a committee as just announced by the President is the most correct course. We have the 67th Article of the Rules of Procedure. It is there laid down that such and such documents shall be submitted in case of an objection to qualifications, and that the President shall lay these documents before a Committee on Qualifications. Such being the case, unless there is a Qualifications Committee the President cannot deal in any way with the documents now in his hands. It is absolutely necessary that a committee be formed in order to receive the documents; failing a committee, the President can do nothing with the documents. I think we ought to proceed to elect the Committee at once.

Mr. UYEKI YEMORI—I wish to enlist the support of the House for Mr. Misaki's proposal. If his proposal is to become a subject of debate, it will have to take precedence of the subject previously announced and I therefore proceed to state my views at once. As Mr. Misaki has already told you, if you elect your Committee on Qualifications after the name of the member whose qualifications are to be investigated is known, you will be choosing your judges after you know the name of the person to be judged. I do not say that a committee of investigation is exactly the same as a judicial tribunal, but it partakes of that character, and the circumstances I have described would be decidedly undesirable. We must have a permanent Committee on Qualifications. It is a mistake that no mention of the appointing of a

committee in a case like this is made in the Rules relating to Permanent Committees. I judge that the rules will have to be perfected. In the 67th Article you will find it stated that the President is to submit the documents of representation to a Committee on Qualifications. Thus the duty of submitting the documents to a Committee is laid down. But there is nothing whatever provided in the previous rules with reference to the election of such a Committee. In fact the rules are very incomplete, and the reason for their incompleteness is not far to seek. In the original draft of the rules provision was made for the election of a permanent Committee on Qualifications, and in the sequence of that provision this 67th Article was inserted. Subsequently the original provision was erased, but the procedure founded upon it was not erased, and the result is the incongruity with which we now have to deal. This being the case, we must take action of the nature indicated in the motion which I now propose. I suggest that the House give a decision on the point of making the Committee on Qualifications a permanent committee.

Mr. ORITA KENSHI—Various motions have been made with reference to this Qualifications Committee, and among them the proposal of Mr. Misaki, namely, that we should have a permanent Committee on Qualifications, seems to receive most support. But I think it doubtful whether this proposal may not be opposed to the Law of the Houses, and for that reason I am disposed to object to it. I say I am doubtful whether it may not be opposed to the Law of the Houses, because in the 78th Article of that law, it is set down that when an objection is raised in the House of Representatives as to the qualifications of any of its members, a Special Committee shall be appointed to examine into the matter, upon a specified day, and the resolution of the House shall be taken upon the receipt of the Committee's report. You will see that the Article provides for a Special Committee when an objection is raised, and from this I take it to be plain that we cannot have a permanent Committee to deal with such cases. It is very possible that, so far as this House is concerned, we should find it advantageous and convenient to submit all questions of qualifications to a permanent Committee, but we must not run counter to the Law of the Houses with that law before us. The provisions of the law are clear, and I think in the face of them we are decidedly incompetent to elect a permanent committee for these purposes. It seems to me a Special Committee is our only resource. But before we proceed to its election I beg to add a word or two. There is no occasion for us to enter into any deep discussion as to whether we shall appoint or shall not appoint a Committee of Qualifications. The 67th Article of the Rules of Procedure requires us to submit to a Committee any objection raised with regard to the qualification of a member. This article was inserted in accordance with the decision of the House. Before the House makes any examination itself it must have the result of the Committee's examination before it. Without complying fully with the prescribed procedure the privileges of a member can neither be granted or withdrawn. When an objection as to qualifications has been formulated, a Committee must be chosen, and to it must be entrusted the duties of examination, and the House, with the Committee's finding before it, must proceed to a decision. There is no occasion for us to discuss this question of a committee at any length, for a committee we must have. Such is my interpretation of the 67th Article. My object in addressing the House is only to point out that the election of a Committee is the due and proper course. The mistake into which Mr. Misaki has fallen is established by what I have said. One word more. It has been stated that to appoint a Committee on Qualifications after the member whose qualifications are in question has been determined, is a mistake. But even if there were question of the qualifications of a brother or friend, justice must be done, and there is no reason whatsoever that inconveniences should arise by appointing a committee after the person whose qualifications are to be considered is known. If this House showed itself to be a partial tribunal, lenient to one and severe to another, not alone would its own reputation be destroyed in the eyes of the nation, but it would forfeit the respect of the whole world. I have no fear of any such calamity, and therefore I say that we need not trouble ourselves about complaints as to the appointment of a Committee after the object of its enquiry is designated. That is my opinion, gentlemen.

Mr. SATO SHOZO—In my judgment the question before the House does not lie between a Special Committee and a Permanent Committee. The Law of the House provides, as one of the members has already pointed out, that the Committee which

we have to appoint is a Special Committee. It is asserted, however, that difficulties may arise if the subject of the Committee's enquiry be determined by the House. But I find by the 62nd Article of the Rules of Procedure that a distinction is made with reference to the subject of enquiry. The House itself is to decide in some cases, and in others the point is to be entrusted to a Committee. Questions relating to qualifications concern the reputation of members, and it is proper that, after a committee has been elected, such questions should be submitted to it without comment. I think we ought at once to elect a permanent committee and hand the business over to it without further reference to the House.

Mr. YAMAGUCHI CHYOSAKU—I have no proposal to make, but before the House gives a decision I want to ask a question. When a motion is made in violation of the Law of the Houses, and when in spite of that it finds supporters, ought the House to divide upon it? It seems to me that if a motion is opposed to the Law of the Houses a division ought certainly not to be taken upon it.

Mr. UYEKI YEMORI—I think I can make it clear whether or no there is any violation of the Laws of the House—(Cries of "Agreed," "Agreed.") Some of the members say that there would be a violation, but I say no. The 78th Article of the Houses provides for the election of a Special Committee. This means that the decision is not to be given by the House in conclave, but that the affair is to be entrusted to a Committee. It is stated that a day must be fixed. Do not confine yourselves to the mere words of the rules, consider the meaning.—(Laughter.) A day has to be fixed—that is to say, from what day to what day, and such being the case a Special Committee cannot be contemplated. In reading, we must use our judgment as far as possible.

Mr. MISAKI KAMENOSUKE—I am the proposer of the motion, and I will give an explanation. There is a mistake about my meaning.—(Cries of "Enough, enough," "Order, order," "You cannot speak twice to one motion," &c.)

The PRESIDENT—The mover may speak several times.—(Cries of "How about Mr. Uyeiki?")

Mr. UYEKI YEMORI—I will explain.—(Cries of "You are not the mover.")

Mr. UYEKI—I am one of the movers.—(Cries of "Order," "Have you permission?" "Unfair," &c.)

Mr. HASHIMOTO KIUTARO—There is a difference between a mover and a seconder. I am entirely opposed to these illegal rulings.

The PRESIDENT—Order, order.—(Cries of "You are all engaged in violating the rules," &c.)

Mr. MISAKI KAMENOSUKE—Allow me as the mover to make an explanation. The House appears to disapprove very strongly. I take it that the motion proposed by me is claimed to be contrary to the provisions of a certain Article of the Law of the Houses. I think that this view is based on a wrong interpretation of the 78th Article. The Law regards it as a very serious matter that objection should be raised to the qualifications of a member, who, having been duly elected, presents himself in this House provided with proper certificates of qualification. That the whole House should undertake the duty of passing a decision at once on any objection raised to the qualifications of a member would be a very precipitate method of procedure, and the spirit of the law, I take it, is in that sense. For that reason the election of a Qualifications Committee is provided, and the matter must be entrusted to it so as to secure deliberate consideration. I do not think that the law contemplates a Special Committee for the purpose of considering questions of qualification. Though dealing with so grave a question, and though deliberate consideration is provided for by the provision that the objections must first be examined by a Committee and then dealt with according to the report of the Committee, it must be confessed that the text of the law is not quite clear. Its spirit, however, is plain enough, I think, and I trust that you will not be concerned about the mere words but will endorse my proposal.

Mr. HASHIMOTO KIUTARO—I have always thought that in this House the laws must be respected, and that for the sake of pushing their own arguments, or establishing their own opinions, members must not interpret the laws arbitrarily. I ask you to consider Mr. Misaki's proposal. Does it not involve the application of an arbitrary reading of his own to a Law of the House? What have we written here in the 78th Article of the Laws? If we read it honestly and interpret it properly, its language is quite plain. It says: "If an objection to the qualifications of a member has been raised in the House." What is meant by "an objection has been raised?" Plainly the words include the meaning that when an objection has not been raised, there is no occasion for a Committee. It is perfectly evident from the

text of the Law that the Committee is only needed when an objection has arisen. With such a clear provision before us, it is truly an arbitrary proceeding, that a member so well versed in such matters as Mr. Misaki should tell us that the Committee referred to is not a Special Committee but a permanent committee, and I am astonished that Mr. Uyeiki Yemori should have supported such a statement. I hope that, inasmuch as a Special Committee is determined by law, the House will immediately decide in accordance with the President's original announcement. Further, I wish to ask the President what view he takes of the action of Mr. Uyeiki Yemori in addressing the House twice, and describing himself as a mover of the proposition. Unless the distinctions made by the rules in respect of these points of procedure are clearly understood and enforced, we shall find ourselves in the position of being controlled by a partial, and prejudiced President.—(Cries of "Hear, hear.") I desire to call the President's attention to this point.

Mr. NASUKAWA KAHŌ—In accordance with the 116th Rule, which provides that although members may still desire to speak, the debate may be closed by a vote of the House, I beg to propose that this debate be now closed.—(Applause.)

Mr. Masaki Bokushin ascended the rostrum to speak, but desisted in consequence of loud cries of "divide, divide."

The vote being taken, a majority were in favour of immediate decision. Here one of the members asked permission to speak, but the President announced his intention of putting Mr. Misaki's motion at once to the House; namely, that a Permanent Qualifications Committee be elected.

Mr. HORIGUCHI KENRO rose and protested against Mr. Misaki's motion being put, on the ground that there were amendments, and that the proper course was to put the amendments first.

Another member attempted to speak with reference to Mr. Misaki's proposal, but was interrupted by cries of "divide, divide."

THE PRESIDENT—It has been proposed by Mr. Misaki and duly seconded, that in accordance with the 2nd Clause of the 42nd Article, which provides that by the motion of a member the House may, if it sees fit, elect a committee, a permanent Qualifications Committee be elected. Those who are in favour of this motion will please rise.

A minority rose.

Mr. SUYEMATSU KENCHO—I presume that we shall proceed at once to the election. The orders of the day indicate that course. But if we are about to elect a Special Committee, it will be very inconvenient not to determine the nature of the question to be submitted for the Committee's examination.

Mr. HASHIMOTO KINTARŌ—Much discussion has arisen with regard to the nature of this Committee, and I confess that the opinions expressed have greatly surprised me. The matter seems to me to be quite plain. It is distinctly provided in the rules that when a Qualifications Committee is appointed, it shall enquire minutely into the affair in question and shall report the result of its enquiry to the House. Upon the receipt of such report the House forms its decision. These limits are fixed by the rules, and I am quite unable to understand why there should be any occasion to fix limits now by special vote.

Mr. SUYEMATSU KENCHO—The point is not one of limits, but of the question to be submitted to the Committee.

THE PRESIDENT—Those who are in favour of electing a Special Committee will please rise.

A majority arose, and the proposition was declared carried.

Mr. MATSUMOTO KANAYE—It has now been decided that a Special Committee shall be elected, and we must of course proceed to elect it, but it seems to me that there is necessity for some amendment of the rules. In the original draft circulated by the Secretary, there was a provision for a Qualifications Committee, as Mr. Misaki has explained, but owing to some conflict among the rules, this provision was erased, the result being that there is nothing in these rules about a Qualifications Committee. You have the rules before you. The 2nd part of the 2nd Chapter relates to Committees of the whole House, the 3rd part to Permanent Committees, and the 4th part to Special Committees. There is nothing else. This is right enough, but in the orders of the Day a Qualifications Committee is mentioned. Here the member entered into a somewhat lengthy explanation of the rules, and concluded by urging the necessity of alterations in order to prevent incongruities such as had just occurred.

THE PRESIDENT announced that the business of electing a Special Committee would be proceeded with.

Several members asked for permission to speak, and Mr. Suyematsu Kencho ascended the rostrum.

Mr. SUYEMATSU KENCHO—We have heard some discussion about the nature of the Committee, but in my opinion when we elect a Special Committee we must come to some decision about its duties. If we proceed at once to elect a Special Committee without determining its duties, it will have to deal with all the questions that may arise during the period of its session. About what then will its special report be made, and at what period would its functions cease? These points would be indeterminate. If the Committee is to continue discharging its functions without limit, it will be in fact a permanent Committee. Unless we decide what subject and how many subjects of investigation ought to be submitted to the Committee, it will cease to be a Special Committee. How many objections to qualifications have been raised? If one, then one; if several, then the whole, should be definitely submitted to the committee. I propose that we decide at least this.

Mr. NASUKAWA KAHŌ—I propose that the Committee be elected by the Sections.

Mr. KURATA JUNGORŌ—The President has given notice that we shall proceed to the election of a committee. I wish to bring two points to the notice of the House before the election. The member proceeded to state that it seemed to him desirable to have 18 members on the Committee instead of 9 on this occasion, and that they should be elected by the House instead of by the Sections.

Mr. KUDO KOKAN supported Mr. Suyematsu Kencho's proposal, on the ground that if the House elected a Special Committee and merely directed it to consider qualifications, it will have to examine every subject of that nature that occurs during its existence. Something must therefore be decided as to the nature of the qualifications to be examined into.

Mr. YAMAGUCHI CHOSAKU seconded the proposition of Mr. Kurata Junjiro, explaining that if the committee men were elected by the Sections, it might be difficult to secure impartiality, and that he considered 9 too small a number.

Mr. SUYEMATSU KENCHO was proceeding to speak, when the President announced that he had recognised Mr. Konishi Jimnosuke.

Mr. KONISHI JINNOSEKKE—I agree with what Mr. Suyematsu has just said. The 71st Article provides that a Special Committee shall be elected in the event of an objection being raised to the qualifications of a member. It seems to me that the object of this provision is to secure the greatest possible impartiality in investigating the question, therefore unless we know the nature of the objection and the name of the member or members to which it applies, we shall fail to elect committee men free from all connection with the members indicated. I trust, therefore, that not merely the nature of the subject, but also the names of the members will be declared to the whole House.

Mr. SUYEMATSU KENCHO explained, as an additional reason for his proposal, that if the proposed investigation related to a number of members, it was evident that the number of the Committee must also be increased, and that possibly even more than one Committee would have to be elected. He deemed it absolutely essential to fix some limits.

Mr. FUJITA MAGOHEI desired to support Mr. Suyematsu Kencho's proposition, but as he explained that he only had a very few words to say, he was permitted by the President to speak from his seat. He pointed out that according to the rules it seemed unavoidable that the duties to be discharged by a Special Committee should be distinctly defined at the time of its election.

Mr. HAYASHI KOICHIRO spoke in the same sense. The PRESIDENT, saying that he too agreed with the proposal, was about to submit it to the House, when

Mr. HAYASHI KOICHIRO urged that as this was a question relating to the interpretation of the rules, the decision ought to rest with the President, a point which elicited general applause.

THE PRESIDENT—The objection as to qualifications has been raised by Messrs. Saito Kanshichi and Takeishi Keiji, and it applies to Mr. Nita Korenori. (Cries of "agreed, agreed.") "No division required." The President, saying that there was no occasion to take the sense of the House further, desired that the election should proceed.

Mr. KURATA JUNJIRO asked how it had fared with the motion he had seconded, and after some other inquiries, it was decided to proceed at once with the voting. While the balloting papers were being prepared and distributed, the President gave notice that in order to conclude the business before the House, the sitting would have to be prolonged beyond 6 o'clock.

By a motion by one of the members, the House decided that the names on the balloting papers need not be read out, but that the numbers attached to the names would be sufficient.

The balloting then proceeded.

Mr. ORITA KENSHI called attention to the fact that many members were absent, and that there did not seem to be a quorum for the opening of the ballot papers.

By this time the Vice-President had taken the President's place. He ruled that a quorum was present, but Mr. YAMAZAKI TOMOCHIKA presently called attention again to the same fact, and asked whether the remaining members might retire.

THE VICE-PRESIDENT said he should make an announcement when the time came for the conclusion of the sitting.

Mr. NISHI DENZO said that members had no right to retire without permission from the President.

Mr. TAKAKA CHINKYO said that permission had, he imagined, been given, and that members who had not been permitted to leave the House were doubtless in the waiting-room. He urged the propriety of not allowing too many members to leave the Chamber until the business of balloting was completed, and asked how many members had obtained permission to leave.

THE VICE-PRESIDENT said that 15 had obtained permission, and that the rest were doubtless in the waiting-room.

A member replied that there were none in the waiting-room.

Mr. ORITA KENSHI said that any ballots opened without a quorum of the House being present would be invalid, and proposed that this point should be settled at once.

THE VICE-PRESIDENT said that the decision of the House having been taken, and the balloting having been completed, it was now only a question of comparing the ballots.

Mr. ORITA KENSHI insisted that even this was illegal, unless the prescribed number of members were present.

He was supported by other members, who argued that any business conducted in the House must be in the presence of a quorum.

THE VICE-PRESIDENT said that although this view might appeal to some of the members a precedent had been established for the opening of the ballot papers, and he should proceed with the task.

A Secretary proceeded to read the ballots, but several members rose to speak, and some coming to the Secretary's table entered into conversation with him. One member, calling out that the ballots were illegal, left the House.

Mr. UYEKI EMORI wished to ask whether the House was in session or whether it was not in session. If the former, he desired to make some remarks; if the latter, he wished to retire.

THE VICE PRESIDENT asked him to wait a few minutes.

Mr. UYEKI YEMORI said that if he could not obtain permission to address the House, he wished to speak to his fellow-members, not as a member but as an individual.

Some members called out that they would hear; others that they wanted the ballots read.

Mr. ORITA KENSHI repeated the question as to whether the House was open or not open. He thought that if a quorum were not present, the proceedings must be declared closed. There was no occasion any longer to ask whether a quorum was present since it obviously was not, and he wanted to know whether the session was alive or dead.

THE PRESIDENT said that it was impossible to give up the opening of the ballots at this stage.

Mr. ORITA KENSHI protested against any business being done without a quorum.

Mr. UYEKI YEMORI said it was impossible to tell whether the members might not be in the building, and he suggested if they were within call they should be summoned, in which case the ballots might be regarded as valid, but the duty of going to look for absent members at their hotels or in their houses did not devolve upon anyone. He thought the President had no recourse but to close the ballots, and he begged that the names of the members still present, and the names of those who had left by permission should be noted, so that the members who had misconducted themselves by going away without leave might be punished.—(Cheers.) There was no occasion to announce the close of the sitting, for the sitting was already closed in effect.

Mr. TAKEISHI KEIJI approved of this suggestion, as it was quite plain that the quorum was no longer present. The President must have observed as much himself already. He thought that the business of balloting should cease even at this stage, however inconvenient.

THE PRESIDENT said he could not stop the proceedings, inasmuch as the ballots had been put in by the whole House.

Mr. TAKEISHI KEIJI asked whether the business could possibly be concluded if a quorum had

ceased to be present while the examination of the ballots was in progress.

The PRESIDENT announced the result of the ballot as follows:—Messrs. Oyagi Buchiro, Suyematsu Kencho, Motoda Hajime, Takata Sanaye, Aoki Tadashi, Okayama Kauekiichi, Misaki Kamemitsu, Suyematsu Saburo and Kono Hironaka.

The House rose at 5 minutes past 10 p.m.

WEDNESDAY, DECEMBER 17TH.

The following is a translation of the speech delivered by the Minister of State for Foreign Affairs in the House of Representatives:—

GENTLEMEN,—The 4th item of a series of interrogations addressed by Mr. Arai Shogo, and other members of this House, on the 9th inst., to the Minister President of State, had reference to Treaty Revision and to the Government's policy in respect of it. I hope to be able to offer you such an explanation of these matters as will prove satisfactory. But whether it will or will not prove satisfactory is a point about which I can offer no prediction, for, as you are well aware, the foreign affairs of a country differ from its domestic in this that the limits of essential secrecy are very narrow. Observing those limits, it is possible that I may not be able to offer a full statement in reply to the original question, still less to the detailed queries which Mr. Arai has just submitted. I will try, however, to be as explicit as possible. I must, however, preface my remarks by a few words. Yesterday, when the Vice Minister of Justice in addressing the House referred to the Imperial Prerogative, the House, or to be more correct, several of the members, uttered, I understand, expressions of dissatisfaction. But I must ask you to recognize clearly that I stand in a different position here to-day from that occupied yesterday by the Vice-Minister for Justice. If this House interprets the 13th Article of the Constitution in the exact sense of its language, nothing more need be said; but for my part, whether I read that Article by the light of European Constitutions or as a part solely of the Japanese Constitution, I am resolved to discharge the duties devolving upon me in accordance with the limits of the Imperial Prerogatives as they are there defined. Nevertheless, it is not my intention for a moment to build myself a rampart with those prerogatives and my own official duties, and to screen myself behind it against your enquiries. I wish to speak, and I must speak. I will therefore do so in accordance with my interpretation of the freedom permitted to me as Minister of Foreign Affairs. One word more by way of prelude. "Consult public opinion; consult public opinion," insisted Mr. Arai in his speech. Certainly, I consult public opinion. The Ministers of State also have not the smallest idea of dealing with this great question merely in obedience to the dictates of their own unaided notions and opinions. Still less have I any such idea, as I think you will perceive from what I am about to say to you. Yet another word. Mr. Arai has just told you that official secrecy has its degrees and limits, and that, although in military affairs secrecy may be imperative, in diplomatic affairs he does not see its necessity. But I think that, according to the circumstances of the case, it is impossible to distinguish the point where reticence may end and candour commence. Mr. Arai asked also what had been the result of the resignation of the Cabinet last year, but I question whether it devolves entirely on the Minister of State for Foreign Affairs to expound that point. The problem of Treaty Revision presented itself 18 or 19 years ago, and some of you are doubtless well acquainted with the facts relating to it, while some may be less fully informed. At the risk, therefore, of making my speech somewhat long, I propose to explain to you how the question arose, how it subsequently fared, and how it has to be treated in the future. The first Treaty between Japan and a Foreign Power was made in 1854; it was the Treaty with America concluded by Commodore Perry. Then followed the treaty with Russia in the same year, and the Treaties with England and Holland a few months later. You may not be aware of the spirit of those Treaties, so I crave your indulgence while I explain it. At that time Japan was a closed country. Her only point of contact with Foreign Nations was the little island of Deshima, and the Treaties were consequently very incomplete. They included little more than provisions rendering our ports accessible to foreign vessels in distress, and they did not extend to any detailed conditions whatsoever. They contained nothing about customs duties or trade questions. By degrees national affairs developed, and in 1857 the Treaty of Shimoda concluded with America, followed by other Treaties in 1858, gave us the first compacts that fairly deserved to be called 'Treaties.' Then for the first time provisions re-

lating to trade made their appearance. These were Treaties with America, with Holland, with Russia, with Great Britain, and with France. Permit me to take you back to the period preceding these Treaties, and to recall events which are a source at once of regret and satisfaction to us to-day. In the treaty concluded with Russia in August, 1858, the 14th Article was of great value. It was a provision securing extraterritorial rights equally to both the high contracting parties. Thus if Russia became entitled to have consulates in Japan, for the control of her subjects visiting or residing in this country, Japan also became entitled to have consulates in Russian dominions, where her own subjects should be tried and punished according to Japanese law. Doubtless it was due to the friendship then existing between Japan and Russia, that the extraterritorial clause in the Treaty was framed so as not to inflict any humiliation on Japan. Of course the state of our intercourse with Russia at that time was such that very few Russians came to Japan, and very few Japanese went to Russia, nor did the vague and incomplete character of the treaty help to develop that intercourse. Still, as I have just explained, commercial relations with foreign countries were for the first time established by the treaties then concluded. The provisions in those treaties relating to customs duties were divided into four classes, but if I should attempt to give you a detailed explanation of the items in these four classes, I should need greater eloquence than I possess to complete the task before to-night or to-morrow morning. I shall therefore refrain from making the attempt, more especially as you can obtain all the necessary information by consulting the published volume of Treaties and Conventions. I may explain, however, that the Customs Tariff then fixed was decidedly advantageous to Japan. You must not forget, however, that a disadvantageous condition was also inserted at that time. As the saying is, every profit has its loss, and if we gained an advantage in one direction in 1858, we suffered a disadvantage in another, namely in respect of the judicial arrangement. To confine ourselves to the Tariff, however. In the Trade regulations accompanying the Treaty, it was provided that the Tariff should be subject to revision five years after the opening of the ports at the desire of either of the high contracting parties. But even this was not without its disadvantage, since it brought the question within the domain of international politics. Thus when in 1862 and 1863, there occurred the affairs of Kagoshima and Shimoda, affairs to which I have no desire to allude in detail, and which you gentlemen do not, I am sure, wish to have recalled, results ensued which produced a disastrous effect upon our Treaty relations. These results are to be found, as you are doubtless aware, in the Convention of 1866. The Representatives of the four Powers chiefly concerned in the Shimoda affair, namely, England, France, America, and Holland, stipulated that Japan should pay an indemnity of 3,000,000 yen, but offered to remit one third of the amount if she agreed to open the ports of Kobe and Osaka at once to foreign trade. Further, these incidents exercised a most injurious effect upon our Tariff arrangements, for whereas under the former Tariff certain articles had been subject to a duty of 20 per cent., and certain others, as for example alcoholic beverages, to a duty of 30 per cent., the Government, in its then disturbed condition, was obliged to consent to a general lowering of all the rates to 5 per cent. Thenceforth the consequences of these misfortunes were felt in all diplomatic arrangements. The Treaties concluded with Germany and Austria, immediately before or after the commencement of the Meiji era, confirmed and perpetuated these tariff stipulations. The history of that time does not clearly show whether the negotiators concluded these treaties with a full knowledge of their injurious nature. I think, however, that they possessed such knowledge, but were influenced by another consideration, namely, that in the Treaties of 1858 it was clearly provided that Japan would be entitled to claim Revision in 1872, and the negotiators consequently looked forward to effecting a new and satisfactory arrangement at that time. This was perhaps a superficial view to take, yet I am inclined to think it was taken. The Treaties concluded with Germany and Austria in 1866 had an undoubtedly grave bearing upon Japan's administrative and legislative autonomy. In the years immediately preceding the conclusion of these Treaties, national affairs and international intercourse had greatly developed, and the consequence was that the provisions of the Treaties of 1866 relating to jurisdiction and commerce were of a minute and detailed character. Thus in respect to extraterritorial jurisdiction, the powers exercised by Foreign Consuls, and the functions devolving upon Japanese tribunals, were set forth with incomparably more exactness than had been the case in previous covenants. The most disadvan-

tageous feature of these Treaties was contained in the 19th Article of the German Treaty and the 22nd Article of the Austrian Treaty. I refer to the most favoured-nation clause. Whether or no public opinion in Japan has been directed to this question, it is certain that numerous newspapers have discussed it, and that in the West it has been a topic of constant argument between learned men, politicians, and international jurists. Only now has something like a definite conclusion been reached. The provisions of this most-favoured-nation clause are very wide. "Whatever rights and privileges," it says, "are granted to any other Power must be granted also to the Power concluding this treaty." The effect of this clause upon the legislative and administrative autonomy of our country is most serious. Thus not only did the empire suffer grave injury from the Treaty of 1866 in respect of fiscal affairs, but also from that time a distinction between foreigners and Japanese was established in judicial matters. In a word, both our tariff autonomy and our fiscal autonomy were seriously impaired by that covenant. But privileges when they are once granted by treaty, become, as it were, the rights of those to whom they are granted, and cannot be revoked at will. What may be accomplished by force of arms is a question apart, but to achieve the revision of a treaty by peaceful means is a task of great difficulty. However, the Treaties concluded up to 1866 became subject to revision in 1872 under the provisions of the Treaty of 1858, as I have already explained. A year's notice had to be given. Count Soyerejima was then Minister of Foreign Affairs, and His Majesty the Emperor sent a mission consisting of Iwakura, the Second Minister of State, Kido, Okubo, Count Ito and others to America and Europe, a proceeding which constituted the first step in the work of Revision. It was beyond question that in the year 1872 of the European calendar the Treaties became subject to revision, and the despatch of a special mission to the West was in consequence of that fact. Here, gentlemen, I would beg your attention to one point. The journals at present urge upon me the necessity of revising the Treaties, but at the same time declare that preparations sufficient to secure that object should be made. Now I ask you whether Iwakura Udaijin had made preparations or whether he had not made preparations; whether he considered preparations essential or whether he did not consider them essential. If this independent empire clearly possesses by treaty the right of Revision, what are the preparations that should be made? Preparations is a word to which a narrow import or a wide import may be attached. The preparations which I am asked to make to-day are apparently very extensive. Eighteen years ago, in 1872, what preparations had the Government made? Preparation or no preparation, the right of Revision was vested in the country. No preparations are needed, I think, to establish this country's right. It is the duty of the Government to revise the Treaties. In the discharge of that duty, no preparations are needed. It is a duty that must be performed. Iwakura then, proceeded to America in 1871 and opened negotiations with the Government of that country. Probably some of you are unacquainted with what happened at those negotiations. This is matter of history no longer secret, and I should willingly tell you all I know about it if time permitted. It will be enough to say, however, that beyond question the vindication of this country's Sovereign rights, the recovery of her tariff and judicial autonomy was the prime purpose of the negotiation. Apparently the time was not ripe, however. The proposals advanced by us elicited counter-proposals of an embarrassing character. Our Government did not approve of them, and it was found impossible to continue the negotiations. Then, in 1875, when Count Terashima held the portfolio of Foreign Affairs, it was recognised that the Treaties could not be left for ever unrevised. Once more the question was raised and the task essayed. For, as I have just told you, the Government has never for a single day failed to appreciate that the Treaties must be revised, that the country has a right to their revision, and that the duty of the Administration is to revise them. Not for a day has the work been neglected. The story of Count Terashima's attempt I need not tell you. It is an open secret, but its details do not concern us here. With regard, however, to the object of Revision, the recovery of the country's tariff autonomy, the state of the nation must be considered. There were as yet no proper laws, and our ideas about law as well as our customs differed so much from those of Europe that to obtain Western consent to the abolition of extraterritorial jurisdiction seemed a hopeless task, and the recovery of our tariff autonomy was made the prime aim. I cannot here attempt to describe minutely the procedure adopted by Count Terashima, but with regard to the failure of his

proposals, the cause was very significant. The Treaty Powers judged that Japan contemplated protective duties, and pressed her to explain what staples of manufacture she intended to protect. England is a free trade country. The rest of Europe, though not altogether free trade in practice, is tolerably unanimous, and, at all events, is not prepared to give its consent to any protective measures of which the precise purpose is not known. I cannot certainly say that this was the cause of the difficulty, but I imagine that it must have been. The Government was not deterred by these failures. It continued its efforts, and in 1878 re-opened negotiations with the United States, concluding a Treaty which is now well known to everybody. It was a Treaty of only 10 Articles, and the negotiator was Viscount Yoshida, now a Member of the Privy Council. It contained a clause, however, providing that the Treaty should not go into force unless a similar Treaty were concluded with other Powers. The others, however, could not be induced to consent, and so this Treaty with America became of no value. In 1880, Count Inouye became Minister of Foreign Affairs and put forward a draft of proposals for Revision. Count Inouye's idea was not to confine himself to one side of the question. He considered it insufficient to recover Tariff autonomy alone or Judicial autonomy alone. Both must be recovered, and the next question was how far this could be effected. Count Inouye devoted all his efforts to gaining support for his view, and at last in 1882, he succeeded in inducing the Foreign Powers to open a Conference in Tokyo. This is matter within the knowledge of you all. The object of this Conference was to consider the proposals put forward by Count Inouye for the recovery of the country's Tariff and Judicial autonomy, and to determine how far Japan's demands might be complied with. The various points raised at this Conference were very numerous. Time forbids me to repeat them in detail, but the principal of them related to Consular Powers, the Powers of Civil Courts, the Powers of Criminal Courts, Executive regulations, regulations for the Harbours and Settlements at the open Ports, rules as to the renting of land, rules relating to religious affairs, Tariff regulations, Trade regulations, rules relating to Coast-wise Trade, to Light-houses, to Harbours, to Harbour dues, to Tonnage dues, to the chartering of Foreign Ships by Japanese subjects, rules relating to casualties at Sea, Laws of neutrality, the question of the operation of the Treaties, and so forth. With regard to this last point, a mistaken notion prevailed among Foreigners and Japanese, that no limit had been set to the operation of the Treaties. In point of fact their term was expressly limited to 1872, but in the course of years repeated failures to effect revision and their continued operation led people to regard them in the light of an established institution and ultimately to count them as a right. The basis of Revision having been approximately fixed at the Conference in 1882, an enlarged and amended scheme was put forward by Count Inouye in 1886. It did not at that time appear that foreign Powers would easily consent to our proposals, whether because public opinion abroad was not sufficiently advanced, or because the general conditions were not favourable, but Count Inouye none the less pushed the undertaking with the greatest zeal. It was, however, found impossible to bring the negotiations to a successful issue, and at this stage two of the Powers presented a new scheme which seemed at once shorter and in some respects better than the previous programme. This was made a new basis of negotiations in the beginning of 1886. The principal question of discussion related to jurisdiction. The Tariff question was separate and I, as second delegate, was connected with it. Numerous obstacles presented themselves in the course of the negotiations about jurisdiction. One side wanted one thing, another something else, and no satisfactory result could be reached. In July Count Inouye came to the conclusion that the proposed Treaty contained Articles greatly opposed to Japan's interest, and that it would be unwise to conclude it. When I say that this was Count Inouye's opinion I am not telling you something which is distinctly recorded, but am only giving you my own belief. I believe that Count Inouye's opinion was that if Japan concluded a treaty imposing such restrictions upon her judicial powers she would be taking a dangerous leap in the dark. He consequently broke off the negotiations, and the question was dropped for a time. This takes us to the close of 1887. I may remark here that the Foreign Office has had to deal with the Representatives and Plenipotentiaries of 17 different Powers and to consider the wishes and suggestions of each. A more complicated task it would be difficult to conceive. I myself have had experience of it, and I think that the energy shown by Count Inouye in dealing with such a

problem is worthy of all praise. Count Inouye was succeeded at the Foreign Office by Count Ito, who combined the office of Foreign Minister with that of Minister President. During Count Ito's short tenure of the Foreign portfolio the question of Treaty Revision was not raised. Not that Count Ito had forgotten it, or that he did not recognise that Japan was entitled to Revision and that she was bound to accomplish it. But Count Inouye's resignation had only just taken place and although Count Ito may have had in his mind a scheme of Revision it was not reduced to black and white. The question remained in abeyance until Count Okuma became Minister of Foreign Affairs in 1888, when as you are aware it was again raised. There was no striking difference between the programme of Count Okuma and that of Count Inouye. The former was in fact based on the latter. Count Okuma's proposals, however, as compared with Count Inouye's were greatly simplified in respect of the jurisdiction question. If we represent this item by 10 in Count Inouye's proposals it will be represented by 2 or 3 in Count Okuma's. Moreover, during Count Okuma's tenure of office many questions which had been handed down from Count Inouye's time were settled. Count Okuma also adopted the plan of separate negotiations with the various Powers, and in this respect his policy differed from that of Count Inouye. Count Okuma's view was that no hope could be entertained of coming to an agreement with 17 different Powers collectively, and the justice of this view was proved by the success of his labours which actually led as you know to the conclusion of Treaties with America, Germany, and Russia, the terms of which are an open secret. These Treaties have not been published, but it is beyond all question that they were great improvements upon the Treaties elaborated in 1887. Nevertheless, public opinion rebelled against them, and the Government itself was greatly affected. You will allow me to pass briefly over this part of my subject too painful to dwell upon. The Treaties were not ratified and consequently could not be carried into effect. Thus since 1872, this question has been raised time after time, only to fall again by the weight of the difficulties attaching to it. The Government has been not a little affected by the incidents of this difficult problem, yet the Government has not abandoned the work. If it did so it would fail in its duty to the country—fail in asserting important rights which this Empire undoubtedly possesses. If you ask me why this question of Treaty Revision cannot be abandoned, I answer that whether from the Government's point of view or from the people's, or from yours, who represent 40,000,000 of our countrymen, it has been established since the first year of this Meiji era that the Revision of the Treaties is among the national duties. I say so because of the Imperial Oath taken at that time, in accordance with which you, the Representatives of the people, are assembled here to-day, and are enabled to discuss the affairs of the nation under the provisions of the Constitution. That first Article spoke of the duties devolving on the nation and among them Treaty Revision is, I think, included. Fully convinced, then, that Treaty Revision is an imperative duty, the Government has again, since last year, considered the question in all its bearings, and though perhaps I ought not to mention this, has discussed in the fullest manner the point of who should be entrusted with the task. The sequel of these deliberations was that I was appointed to the duty, and while I am well aware of my own want of strength, I can assure you that I have never underrated, I do not now underdate, the difficulties of the task. Whatever may be my capacities, however, I have received His Majesty's gracious commands to devote myself to the work, and I cheerfully obey them. Considered from another point of view, there is additional reason why this problem of Treaty Revision cannot be abandoned. Account must be taken of the friendly disposition displayed towards Japan, and the appreciation of her progress shown by the Governments of Foreign States since the time of Iwakura, down to the period covered by the negotiations of Counts Inouye and Okuma. History will one day tell you how many and of what nature were the proposals made to our Government by Foreign Powers in the course of the various negotiations to which I have alluded. It is beyond my province, however, to give you a detailed account of those proposals. What I am at liberty to tell you I will state briefly. The first thing which I can tell you is that Foreign Governments appreciate the progress made by Japan since the Restoration; progress in government, in administration, and in legislation; understand that with such a record behind us there can be no halting in the future, and believe that this nation deserves to be included among the friends of Western peoples. Guided by these sentiments, they have consented in a measure to Japan's demands. When, however, I became Minister of

Foreign Affairs and found myself charged with this exceedingly difficult task, an idea occurred to me, which I venture to explain, not, I pray you to believe, with any reference to myself, but simply as a part of the problem. I thought, and I still think, that the Minister of Foreign Affairs cannot afford to devote himself from morning till evening and from Spring to Fall to the task of Treaty Revision. He has other duties to perform; duties connected with the foreign relations of the Empire. I think you will understand that the policy to be adopted by this country in its dealings with other nations requires the close attention of the Minister of Foreign Affairs, and that many points arise in connection with it which, although they may not have presented themselves with equal insistence to your statesmen ten or fifteen years ago, are now matters of great moment, demanding no less care than Treaty Revision. Ever since the Formosan affair, a belief seems to have obtained that Treaty Revision should occupy the whole vista of foreign affairs, and the eyes of the country have been firmly fixed on the four ideographs *foyakai kaisei*. Of the many difficult problems arising after that event and partly in connection with it, problems having deep concern for this Empire, whether considered from the point of view of its own dignity or from the point of view of its position in the Orient, of these problems little thought has been taken by the public. People have made the mistake of imagining that Treaty Revision was the only grave feature of our foreign policy, and of this mistake I was fully sensible when I assumed the portfolio of Foreign Affairs. I felt then and do still feel that the whole question of our foreign policy demands the deepest thought, and, in determining it, the points that first present themselves for consideration are the position this Empire occupies and the capacity of its inhabitants. As for the position of the country, everybody is agreed that it is excellent. If you look at the map of the world, you will see that America has her back turned to us, and that on her western coast, thousands of miles away from our shores, no good port lies open. Europe is no less distant from us for all practical purposes. But here in Asia the case is very different. At your doors sits a nation of 270,000,000 people, ready to take your manufactures and products and to give you its own in return. Look at the coal-fields of your own country in the north and in the south. Are not these land-marks set by nature to indicate the position your country ought to take? This coal, and other products which I need not enumerate, invite you to make use of them for the development of the national wealth, and tell you plainly that it is your duty to cultivate the technical knowledge and enterprise, and to raise the capital necessary for taking advantage of these natural gifts, and to offer them, not to countries separated from us by thousands of miles of rough seas, but to countries which stand smilingly at our doors inviting us to be their partners in trade and industry. As to the second point, namely, the capacity of the nation, I think there is not much room for doubt. This nation possesses a reasonable measure of what in Europe is called generative power, and the growth of its population may be safely anticipated. Moreover, in respect of moral endowments, I do not think there can be any question as to the capacity of this nation. Occupying such a position, and possessing such capacities, why is it that the people of Japan do not devote more thought to the foreign policy of the Empire? If you go back in your own history to the Ashiikaga era, you will find that the men of southern Japan whom some may perhaps call pirates, launched themselves in little boats and harried the coasts of China with its hundred millions of people, coming and going at will and taking and leaving at will. Surely it seems somewhat petty that the descendants of such men as these should allow their mental vista to be occupied entirely by the four ideographs *foyakai kaisei*. It seems to me that larger subjects invite their attention. The present, however, is not the occasion for me to dwell at length upon this phase of our foreign policy. Further, in speaking thus, I do not wish to underdate the importance or the difficulty of the Revision problem. The solution of that problem may in truth be called the ladder by which the country can ascend to those larger spheres of activity of which I have just spoken. For eighteen or nineteen years our statesmen have been devoting their best energies to the solution of this difficult question, and its settlement is unquestionably necessary. Persuaded of this, the present Cabinet has given much thought to the subject since last winter. We feel that Treaty Revision is no question of party politics, but that it concerns the whole nation of 40,000,000. In considering the course that ought to be pursued with regard to it, the Government has spared no pains to arrive at a clear conception of the trend of public opinion and the views held by the nation. Only now is it possible to meet and consult with

you, gentlemen, the Representatives of the people. It has been necessary hitherto to have recourse to other channels of contact, as for example the public press. I do not purpose to weary you by entering at length into this point, but with your permission I will quote some of the principal opinions put forward in the press. Thus, in November of last year, a newspaper told us that Consular jurisdiction and mixed residence could not exist side by side, and that the latter must be regarded as the price with which to purchase the abolition of the former. Another journal declared that it did not object to mixed residence, but that it did object to the combination of mixed residence and Consular jurisdiction. Another said that the two points of criticism in the former scheme of Revision were the granting of mixed residence without the abolition of Consular jurisdiction, and the permission given to foreigners to own real estate. It added that although everything else was not absolutely satisfactory, the amendment of these two points would content it. Another averred that the employment of foreigners in the capacity of Judges and the giving of any pledge as to the period for the compilation of the Japanese Codes of Law, were opposed to the national dignity. These, you may say, are only the opinions of the editors of newspapers. But they are Japanese newspapers. A large number of views have been expressed in journalistic columns on this subject, but their gist is contained in the extracts which I have just read to you. The *Fiji Shimpō*, in one of its issues of last December, said that Count Terashima had failed over the Tariff question, and Count Inouye over the jurisdiction question, and asked whether the Government ought not to revert to the Tariff problem. This is not the Government's view. Count Inouye, as I have told you, and Count Okuma after him, were equally persuaded that the problem must be dealt with in its entirety, and that Tariff autonomy and judicial autonomy must be recovered together, and such is my policy also. As for the other points made by the journals which I have quoted, I trust you will not imagine that such things ever lacked the Government's appreciation. It was not, you may be sure, of Count Okuma's own choice that any engagement was given with regard to the time when the Codes of Law should be compiled. Doubtless he could not avoid some such concession. But on this point I hope, with the approval of His Majesty and the consent of the Cabinet, to make an arrangement such as shall satisfy you. This, however, is precisely one of those questions which present most difficulties to your Foreign Ministers. In deciding how much we shall give and how much we shall ask, we must have reasonable grounds to go on, grounds such as shall be acknowledged in Japan at least, and, if possible, universally. And when I look at the demands to be formulated by Japan, I am compelled to ask myself what is the position of the Japanese Judiciary and in what condition are Japanese Laws. England and apart, the countries of Europe have written Codes of Law in accordance with which justice is administered, whereas the compilation of the Japanese Codes has only just been completed and they are not yet in operation. This is one of the points about which Foreign Powers raise the greatest difficulty and are most anxious to obtain guarantees. Not until 1872, was one of the most signal reforms in Japanese modern history effected, namely the complete separation of the Executive and the Judiciary, and not until 1882 were the new Criminal Codes put into force. These Codes were not servile copies of the French, or of the German, yet I think that the principles embodied in them entitle them to rank with high products of Western legislation. They are now in successful operation. Then in 1885 followed the law of the examination of Judges. By this law it was publicly recognized that judicial officers must possess a high standard of learning, and must be able to endure a thorough test of their capacities. We have here a guarantee of considerable value. Then we have the great work of civil codification, which is indeed a signal step of progress and we have also the Law of the Organization of the Courts of Justice, which, in my opinion, deserves to rank as an article of the Constitution. Next there is the Commercial Code, which is to go into operation next year. About this I crave your permission to say a word with reference to a speech delivered by one of your members in this House yesterday. Mr. Suyematsu said that some special reason had probably influenced the Government in respect of the Code. But I hope I need not tell you that the idea of legislating for two or three thousand foreigners who live among us rather than for the 40,000,000 of Japanese people, has never for a moment been entertained by the Government. The Commercial Code was compiled and promulgated solely to meet the needs of this nation, and with no ulterior object whatever. The Constitution

too is a most effective guarantee. I allude of course to guarantees given to foreign Governments and foreign nations, and I repeat that among such guarantees the Constitution is of paramount value. This Constitution came into operation last month—and I need scarcely say that the existence of ample reasons for putting it into operation was thoroughly recognised by the Government. From the time of its enforcement all pretext to entertain any mistrust of Japanese laws was removed. I do not say that foreigners previously withheld their confidence from our laws, but I do say that laws passed by the representatives of the nation in the two Houses of the Diet, possess in public opinion a value not attaching to laws enacted under different circumstances, and constitute guarantees worthy of all confidence. The Government is persuaded that the representative institutions of this country, now in force, will be regarded as valuable guarantees by the Treaty Powers. The repeated failures to accomplish Treaty Revision since 1872 may be looked back to with regret, but, on the other hand, we have the progress of Japan to consider. The guarantees furnished by that progress and the increased knowledge which the world now possesses of Japan's condition, warrant us in hoping that the position of this empire will now induce Foreign Powers to treat our proposals with liberality. I am disposed to think, indeed, that the failures made in Treaty Revision have been so many steps in the history of our country's progress. Turning now to the question of what course should be pursued henceforth, our Government finds itself confronted by a consideration of great moment *vis-à-vis* the Treaty Powers. We are bound not to take any step which shall suddenly render nugatory the consideration that our proposals have hitherto received at the hands of the Treaty Powers and the friendly disposition they have displayed towards us. Again, if any attempt were made to suddenly disturb the privileges enjoyed by Foreign Powers under the Treaties, it would be only natural that trouble should arise. Guided by these reflections, the Government is giving its deepest attention to the problem of what steps should be taken and how far we should advance. Let me add a word here. In the early years of the *Meiji* era, whenever any difficulty arose, the Representatives of Foreign Power used to combine, four or five at a time, and adopt what may almost be called a policy of intimidation (*Kyōhaku shudan*) towards Japan. But this is ancient history. We are now treated in a thoroughly friendly manner. I think, then, that all these changes which have come about, constitute ample guarantees. Further, both from an administrative and a legislative point of view, Treaty Revision must be accomplished. Our liberty and right as subjects have their source in the Sovereign, and in order to secure them to us the Constitution has been granted. You all know this without hearing it from me. Now that we possess a Constitutional Government, the independence of the Executive and of the Legislature cannot be questioned in speech or disturbed by act. Yet what has been the fact up to the present time? You know well, gentlemen, and especially do those among you know who have served as judicial officials. I, not an expert in such matters, scarcely venture to speak to you about them, or to offer you detailed proofs of how much that independence is interfered with by the extraterritorial system. But I would direct your attention to the 4th Article of the Constitution where it is stated that "the Emperor is the head of the Empire, combining in Himself the rights of Sovereignty, and exercising them according to the provisions of the Constitution," and I would ask you whether the existence of Extraterritorial Jurisdiction within His Majesty's dominions does not conflict with this Article. I would direct your attention to the 8th Article where it is written that "to maintain public safety or to avert public calamities, the Emperor issues Imperial Ordinances in the place of law when the Imperial Diet is not sitting," and I would ask you whether the existence of Extraterritorial Jurisdiction within His Majesty's dominions does not conflict with this Article. I would direct your attention to the 57th Article, where it is written that "the Judiciary shall be exercised by the Courts of Law according to law, in the name of the Emperor," and I would ask you whether the existence of Extraterritorial Jurisdiction within His Majesty's dominions does not conflict with this Article; whether until the Treaties are revised, a conflict does not exist between the legislative and judicial powers created by this Constitution and the exercise of Consular Jurisdiction on Japanese soil. If there is such a conflict, then it follows that at the present moment the free exercise of this Empire's Administrative and Legislative rights is prevented by the acts of a number of independent Powers within our borders. Do not those various Powers possess the status of independence within Japanese territory? Having we not here

a number of independent Powers, veritable *imperia in imperio*, their subjects and citizens living upon us or sojourning in our midst? Such a state of affairs proves beyond all question that the Treaties must be revised. On the other hand, as I have already said, the unity of Foreign Powers must not be disturbed, neither must the privileges they enjoy under the Treaties be suddenly taken away. Therefore the Government has opened negotiations, and I think that the policy it intends to pursue will be understood by you if you recall the extracts I have read to you from the newspapers and the explanatory remarks I have added. When, however, you ask me to disclose what is now under deliberation and in negotiation, I find myself in a difficulty. I think that if it were possible for me to answer Mr. Arai's questions fully, to tell you what we have proposed, what answers we have received from the Treaty Powers, and how far their good disposition has been displayed towards us—I think that if I could tell you these things fully, many of you—I do not say all, but many—would be satisfied. But I am not at liberty to speak to you openly as I should to any own colleagues in the Government for the purpose of securing their consent, or as the Cabinet would speak to the Emperor to obtain His Majesty's sanction. A certain journal has been good enough to say that I am between the nether and the upper mill-stones, and truly it well described my position. Those of you who are acquainted with the rules and methods of foreign diplomacy will appreciate this, and I venture to think that if you were all acquainted with those rules you would not have placed me between the mill-stones to-day. The Government is resolved to assert this country's Sovereign rights and to take every possible step for the promotion of its economic advantage. But, as I have pointed out, extreme measures are to be avoided. We do not believe that they would be for the advantage of the country or of its forty million inhabitants. Short of such measures, the Government is sparing no efforts within the limits of the country's ability to achieve the object of placing the empire's fiscal and judicial affairs on an independent footing. One word with reference to my statement that I am not at liberty to give you full particulars. It is the custom now-a-days to quote precedents from England or America, and with your permission I will read you what Lord Clarendon said in the British Parliament in 1802. (The speaker here read an extract from a speech delivered by Lord Clarendon pointing out that a Minister of the Crown was bound by his duty to his Sovereign to refrain from disclosing the particulars of any affair falling within the scope of the Royal prerogative.) That will explain to you why I am prevented from answering all your questions in full.

FAREWELL DINNER TO MR. GREATHOUSE.

On Thursday, a farewell dinner was given by over sixty members of the foreign community of Yokohama at the Grand Hotel, in honour of Mr. C. R. Greathouse, the departing U. S. Consul-General in Yokohama prior to his starting for Korea. The cosmopolitan character of the gathering and the spontaneous response to the exceedingly brief notice given of the affair, are shown by the following list of subscribers, the majority of whom were present at the dinner: His Excellency J. E. Swift (U. S. Minister to Japan), Messrs. E. Dun (Secretary of the U. S. Legation), Jas. Troup (H. B. M.'s Consul), Chief Justice Okamura (of the Yokohama Local Court), Luis Torres Acevedo (Spanish Consul), A. Dumelin (Swiss Consul), G. H. Scidmore (Acting successor to Mr. Greathouse as U. S. Consul-General), John McLean (U. S. Deputy Vice-Consul General), John Lindley, O. Keil, J. F. Lowder, J. R. Anglin, C. S. Arthur, Mitchell C. McDonald, C. M. Martin, Jas. Martin, Jr., E. Leopold, E. Binder, Milton A. Howe, W. Mann, E. Oppenheimer, L. L. Fobes, J. T. Griffin, Dr. T. H. Tripler, Messrs. T. L. Brower, E. H. Tuska, J. Mendelson, Harry Deakin, N. Smith, J. H. Brooke, W. J. Cruickshank, Arthur H. Groom, Wm. L. Merriman, A. Langfeldt, W. J. Kenny, Arthur T. Watson, Dr. Stuart Eldridge, Dr. A. C. H. Russell, Messrs. H. Z. Wheeler, Thomas Tyler, S. Cocking, S. C. Nash, C. Nembrini Gonzaga, Jas. Parsons, W. Ross, J. J. Gargan, C. P. Low, Theodore Morris, J. K. Goodrich, F. H. Olmsted, H. M. Roberts, T. F. McGrath, S. Sondheim, E. P. Nuttall, C. Gibbons, O. H. P. Noyes, J. Johnstone, Dr. C. U. Giavatti, Messrs. A. C. Siern, T. W. Kennaway, E. Gordon Lowder, J. F. Pinn, D. E. Simon, E. J. Pereira, H. H. Jacobs, L. Stonebrink, J. Ph. von Hemert, Jr., J. Witkowski, E. Andries, B. C. Howard, F.

Strahler, F. V. Thorn, R. Dress, J. T. Cole, E. A. Sargent, S. Isaacs, J. J. Eford, Dr. C. H. Hall, Messrs. C. H. Hinton, and W. A. Whaley.

The guest of the evening sat at the head of the table on the right of His Excellency the U.S. Minister. Thanks to the artistic efforts, chiefly of Mr. L. Boehmer, the dining room was prettily and effectively decked with floral designs, while strings of lanterns hung over the heads of the guests lent a delightful tone to the room. The following menu was served in a manner which reflected much credit on the Hotel manager (Mr. C. S. Arthur):—

MENU
Potage St. Germain.
Consommé Printanier à la Royale.
RELIEF.
Filet de Sole à la Normande.
ENTRÉES.
Terrine de Nœuf à la Marechale,
Filet de Boeuf à la Godard.
Quail à la Joinville.
Punch à la Romaine.
LÉGUMES.
Choux-fleur à la Crème.
Pieds de Celeri au Jus.
ROTI.
Gigot de Porc Salé.
Dinde truffée.
Salade de Saison.
ENTREMETS.
Pudding à la Diplômate.
Baba au Rhum.
Turban de Gelée à la Marie Louise.
Desserts Assortis.
Café, Liqueurs, etc., etc.

Covers having been removed,

His Excellency Mr. SWIFT rose to propose, as a token of respect to the people amongst whom they were living, the health of His Imperial Majesty the Emperor of Japan. To this the company responded heartily, and the toast was drunk to the strains of the Japanese National Anthem from the Band stationed outside in the corridor.

Mr. SWIFT then rose to express to all individually, who had been concerned in the getting up of this agreeable remembrance of friends, how much he was obliged to them for the compliment they had paid him by inviting him to be present at this dinner given to celebrate the farewell, which he hoped would not be for long, of his old friend and almost companion, Mr. Greathouse. He had known Mr. Greathouse for 20 years or more, and had always found him kindly and willingly disposed to everybody.—(Applause.) It was not alone an honour to Mr. Greathouse that so many nationalities were represented there that evening,—it was a compliment to themselves as showing the good fellowship which existed amongst them as a body. Not being a member of the community among which Mr. Greathouse had been thrown for the past four years, the duty of proposing the toast of their guest did not seem properly to devolve on him (Mr. Swift), and he would therefore call on Mr. Lindsley to offer the toast.

Mr. LINDSLEY said he had little to add to the remarks of Mr. Swift. He was sure they would all heartily join with him in drinking to the health of their guest, Mr. Greathouse, and in wishing him a safe and pleasant journey to Korea.—(Cheers.) They would all miss his genial face from their midst.—(Hear, hear.) Those who had had business relations with his Consulate would not soon forget his sympathetic appreciation of the fact that an invoice, unlike a poem, was "fit non nascitur;" that it required time to make it out, and was not something that could be kept in stock ready for use on mail day at a moment's notice. If Mr. Greathouse was remaining he believed the terrors of the McKinley Bill would not be so great for them. Although a Democrat, the present Republican Administration seemed to be as loath to part with him as they were, which was certainly a high tribute to his ability. He would ask them to drink Mr. Greathouse's health with their best wishes for his success in his new career.

Three cheers were given for Mr. Greathouse, the company afterwards taking up with zest the refrain "For he's a jolly good fellow" to the accompaniment of the Band.

Mr. GREATHOUSE then rose amid cheers to respond. He said—Mr. Chairman and friends, it would be idle for me to say that I am not equally gratified and delighted by the splendid banquet with which you have honoured me, and also by the hearty manner in which you have received the toast of my health. In looking around at the friendly faces that I see about me to-night, because I see nothing but friendly faces, I feel inclined to indulge in reminiscences; to say to all and each of you the pleasant things I would like to say. But I would have to postpone my departure from Japan, which must take place at 12 o'clock to-morrow. But I will say this—that while my duties here as Consul General to Japan have been onerous and perplexing, and sometimes very annoying; while I know that in many instances I have not been able to do what I considered to be my duty without at last displeasing some people,

yet I shall leave Japan with feelings of unfriendliness to none and with friendliness to all.—("Hear, hear" and applause.) I am particularly gratified to-night to see that, while I expected to see here, in response to such a short notice, only a few of my nationals to bid me farewell, so many of other nationalities besides my own are here to say Godspeed to me. It shows me this, that while I have had no diplomatic relations—because that has been given to my superior—yet in my private capacity I have at least been able to sustain friendly relations with all.—(Cheers.) Now in bidding you good-bye—I can hardly say it is good-bye—I desire to state that it would have given me pleasure to call on most of you as I expected to do. I am a perfect bankrupt so far as social matters are concerned, and I should like to have called individually on you, but I am unable to do so because the steamer sails unexpectedly to-morrow. In leaving you I would like to say that I have but one recollection of Japan—I have but one feeling in respect to the place, that it has been to me agreeable. My relations with the people here have been always agreeable; I have been assisted in every way possible by my own nationals. My official business, my private and my personal relations have been pleasant, and I leave Japan, so far as I am personally concerned, without a single enmity, with not a single feeling of ill-will. I have for every person in the community the friendliest feelings, and I hope that in the future I may be associated with them as pleasantly as I have been in the past.—(Applause.) Before proposing a rather irreverent toast I desire to thank an old friend of mine, Mr. Swift, and also Mr. Lindsley who proposed the toast with such kindness. I will now, gentlemen, offer a toast to each and all of you individually, "May the Lord love you and not call you too soon."

"Should and acquaintance" having been played by the Band, Mr. SWIFT made a few happy and humorous remarks and then called upon

Mr. BROOKS, an old British friend of his, to say a few words. Having with some reluctance complied, Mr. Brooks expressed his pleasure at being present to pay to Mr. Greathouse his respects and to wish him a safe voyage to and a pleasant time in Korea. Mr. Greathouse was going there, he believed, with rather romantic expectations. From his knowledge of the country, for which he had had to largely depend on newspapers—and they were not to be always depended on—(laughter)—he had formed a rather unfavourable opinion of the peninsula and its Ministry. Mr. Greathouse was going as an adviser to the Government, and they might therefore look for some good to come of his exertions, though he would no doubt meet a great many obstacles and perhaps jealousies from his own countrymen, beside the difficulty of dealing with Orientals whose ways were different from our ways and who were very difficult to understand in many respects. Having briefly touched on Korea's relation with China, Mr. Brooks said he was glad this gathering was not wholly composed of fellow citizens of Mr. Greathouse, for although that might be very complimentary to him, still the fact of some of them being present who were not compelled as it were by virtue of nationality to be present, was the best possible testimony that they had appreciated his exertions during the time he had been with them.—(Hear, hear.) The defects of the American diplomatic service by reason of frequent changes came in for some good natured chaff from Mr. Brooks and smart repartee from Mr. Swift, and in conclusion the speaker submitted the toast of Mr. Okamura, Judge of the Local Court.

The toast was received with cheers, responding to which Mr. OKAMURA expressed his thanks and dwelt upon his pleasant relations with Mr. Greathouse. They were the best of friends, he said, especially for the reason that Mr. Greathouse was a friend of Common Law, and though he was sorry for Japan's sake that Mr. Greathouse was leaving, he was glad for the sake of Korea. In conclusion, he explained that the scant representation of Japanese was due to the short notice given by the promoters of the banquet.

Mr. LOWDER, in response to a pressing demand from Mr. Swift to speak, said he felt it an exceeding compliment to be called upon to speak about he knew not what, seeing that everything which could possibly be said to express their feelings towards Mr. Greathouse had been repeated over and over again. He was glad, however, to have this opportunity of bearing his testimony individually to the worth of their departing guest. As a member of this cosmopolitan community—and not forgetting one moment that he was an Englishman,—he for one desired to convey his individual testimony to the worth of Mr. Greathouse.—(Cheers.) Having met him in various positions

of life, socially, but more particularly and more intimately in the profession to which he (Mr. Lowder) belonged, he had no hesitation in saying, in face of the gathering there, that in his opinion Mr. Greathouse had been the soundest and also the best American Consul that had ever been here during his (Mr. Lowder's) time, and he spoke with the experience of 30 years.—(Loud applause.) Mr. DROSS proposed the toast of Mrs. Greathouse. She had won, he said, every heart in Yokohama, and wherever she visited and wherever she went she was welcome.—(Applause.) The toast was enthusiastically received.

After a few recitations, &c., the company broke up.

RURAL LIFE IN EAST ABERDEENSHIRE.—I. THE VILLAGE.

East Aberdeenshire is bare and unlovely. No lofty mountain, thundering waterfall, or smiling lake attracts the tourist. In short we are in the prosaic lowlands. And yet, to the native it possesses an attraction all its own. The farms are highly cultivated, the farm houses have an air of solid comfort, and the villages lying in the valleys of the Uthan and the Ugie are pretty if not picturesque.

A tiny village situated on the banks of the latter stream is the one about which I have attempted to give a little sketch—the village and its surroundings as they were twenty years ago and more, for alas! change has been busy there as elsewhere, and many of my recollections are now ancient history.

The parish is a large one, containing some half dozen hamlets and at least two chapels of ease to the parish kirk. But our village, though not the largest, is certainly the most important in the parish to which it gives its name. It stands half a mile off the turnpike road, and is approached from the east by a cross road, having the Ugie burn on one hand and a thick plantation on the other. A picturesque old bridge spans the burn at the very entrance of the village, and here a huge elm tree dips its overhanging branches in the water. Here stands the parish kirk, plainest of presbyterian edifices, and round it cluster the graves and headstones of the old kirkyard.

Here the doctor and the bank agent, the parish schoolmaster and the druggist hold sway in their different spheres; and, at a stone's throw from the village stands the manse, with its pretty garden and bleaching green sloping down towards the river's brink.

But we must begin at the top of the tree. The village and the farms in its neighbourhood are unequally divided between two lairds, the magnates of the district.

Of the two great houses, the smaller one is close to the village, indeed only a high stone wall divides the garden from the village street. Ours have I seen, with a kind of awe, the green dove in the wall open and "the laird and the lady" step out. The "lady" with her haughty air, and erect figure, dressed in a rich silk and a handsome shawl. The dapper little laird following, the morning sun shining on his fine old head and silver hair, while he holds in his hand the unlaid twig of walnut, with its two or three fragrant leaves picked from the big tree by the gate. They walk past the kirk, a few steps farther on, and enter what is mostly known as the chapel; for staunch Episcopals are they. One hears a murmur as they pass, that for all the lady holds her head so high, she has never been the same woman since the dreadful news came to her of the loss of her eldest and favourite son in the wreck of the ill-fated *Birkenhead*.

Through the laird's garden winds the Logie, and there, on its banks, are found the earliest snowdrops, primroses and lilies of the valley. In summer the air is sweet with honey-suckle, white, pink, and scarlet hawthorn in the wider dells; while the lady's special garden is bright with roses and geraniums.

The lodge gates of our other laird are half a mile from the village. The park is spacious, indeed I believe it is seven miles from end to end; ash, beech, and birch adorn the borders of a fine lake, where the stately swan builds her nest on a reedy island. This laird is an ex-colonel in the Guards, the lady, an earl's daughter and Woman of the Bedchamber to her most gracious Majesty the Queen. Indeed, both our lairds migrate with their belongings to London for the season, and are very big people, so we will leave them and return to our villagers proper.

The Minister, an old bachelor, on his white pony, paying his daily visits of charity and counsel; the doctor, who has been in the parish for forty years, and though continually in the saddle, is still a hard rider; the schoolmaster, father of six

boys who have all taken good places in the world, and patient teacher of a hundred and fifty unruly neophytes of both sexes; the banker, about whose peccadilloes least said soonest mended, the druggist, who has had a university education, but who is looked upon as an oddity—these form the élite of village society. They dine at four o'clock, and meet frequently for a rubber of whist, with a smoked haddock and tumbler of whiskey toddy for supper at nine o'clock.

Then comes the higher class of tradesmen: Davidson, the watchmaker; Lawrence, the iron-monger and grocer; Hutchison, the retailer of tea, snuff, and tobacco; Irouside, the general dealer; Mary Robbie, the baker. Next the shoemaker's shop, the saddler's and the blacksmith's. Last but not least, the inn. This latter a place of importance once, when the stage coach put up there, and rent dinners, election meetings and local balls were held in its fine hall, but now dull and half deserted.

A step lower in the social scale come the journeyman mason, carpenter, slater, plasterer, smith, or tailor, and here and there the cottage of a married farm servant, who only sees his home for a few hours once a week, or that of a widow who takes in washing, or knitting, or manages to keep a cow on the scanty pasture to be picked up on the road sides, eked out by a few turnips and a little straw in winter. I have omitted to mention the two carriers who journey weekly the one to Aberdeen, the other to Peterhead. This is of course before the days of railways in our quiet corner. The carriers are always money making men and retire in middle age to well stocked farms. These are our villagers, and now for a few words about the houses they live in.

The better off have fairly good houses built of substantial stone and lime with slated roofs and dormer windows. The furniture and internal arrangements differ little from those of English houses of the same class.

But with the poorer cottages it is different. They are built of rough stone; hardly, if ever contain more than two rooms, the "butt" and "ben;" are thatched with straw or heather, and are dark and gloomy inside, it being uncommon to have more than one tiny window in each room. The "butt," or kitchen, is certainly the most comfortable and homelike. There is the wide, open fire place, with its huge chimney or "lum," on which a peat fire blazes, or is allowed to fall into embers, according to the season or the requirements of cookery. On the little window sill is the family library, the contents of which would astonish a stranger. Along with the Bible, and Grey's Arithmetic, you may chance to find "Cæsar's Commentaries" or "Cornelius Nepos" in the original; and I have even picked up a stray volume of "Gil Blas."

Close by jowl with the library is to be found the conservatory, consisting invariably of fine fuschias and what they call geraniums, but what are in fact large and handsome pelargoniums. The *deace* or wooden settle, with its little table which can be let down or fastened up at pleasure, and upon which the *guidman's* supper is always spread; a wooden chair or two, a couple of three-legged stools, a dresser with a plate rack behind, where the willow pattern displays itself to advantage. This is the only furniture. I had almost forgotten the *box bed*, a sort of wooden ark, usually occupying one side of the room. It has a small shelf at the foot, forming a separate little bed for one or more of the children, and is furnished with doors, like a cupboard, which are kept closed during the day, whatever they may be at night. Here I should be afraid to say how many of the family may sleep. The floor of the kitchen is of hard beaten earth, but all is clean, fresh and wholesome. As much cannot be said for the *ben end*, which is rarely used, and badly ventilated. It has usually a wooden floor, may be covered by a bit of carpet, a mahogany table in the centre, a horsehair sofa and four chairs ranged round the wall, each with its special and particularly hideous crocheted *tidy*. A chest of drawers, decorated with bandboxes, wherein repose the Sunday bonnets of the family during the week. A tiny mantelpiece adorned with China shepherdesses, the tea-caddy and the photographs of distinguished relatives in Australia, Canada, or it may be, the Far East.

"My sister's son, the barrister," was a great card in one of the poorest cottages. It may perhaps be imagined that this was a sort of male Mrs. Harris, but a real live barrister, fresh from Lincoln's Inn, made his appearance at least, and stayed a week with his humble relations. I wonder what they did with him at night. The *box bed*, which repeated itself in a glorified form in the *ben end* must have received him and his extensive wardrobe.

One or two village scenes stand out clearly in my memory. Sunday morning, with its solemn

bell; crofters, trades-people, farm servants are flocking into the village on that day. The men clad in decent black, the old fashioned blue coat and brass buttons preserved here and there. The women in various gowns and tartan shawls. One or two old wives may yet be seen on a fine Sunday in the nearly obsolete scarlet cloak and white *match*.

The bible is carried carefully wrapped up in a clean white handkerchief, and a posy of thyme, balm, and southernwood, with perhaps a cabbage rose in season, is grasped firmly in the hand, and smelled at intervals with much satisfaction. Farmers and their wives arrive in their gigs, the young people having tramped their three, four, or even five miles o'er rough and smooth. The gigs are unyoked in the inn yard, the wives go to warm their feet in the inn kitchen, or pass directly into the kirk, while their lords linger at the kirk stile, discussing the prospects of the crop, or the prices at the last market, until the bell stops ringing. The minister walks down the street in his gown and bands, and is followed by his flock into the kirk, where they listen patiently to a good solid homily sermon. The monotony is varied by a couple of extempore prayers, and psalms sung to the old tunes such as *Rockingham*, *Martyrdom*, and the never failing *Old Hundred*.

Next take a summer evening, with its long twilight. A party of girls meet on the common bleaching green to water or bring home the clothes, singing or chatting over their work. Or you may meet a solitary maiden coming from the well, her pair of wooden buckets held at arms' length by a square wooden frame. Going to the well, however, often means going to meet your *lad* or lover, and it may be an hour or two before that *fraught* of water reaches its destination, and the mother may look in vain for Kirsty or Jean when it is milking time, or the children are crying out for their evening porridge. In the month of June it is still light at ten o'clock, and groups may be seen standing round the sniddy door; the overwrought smith with his pale face, but sturdy form, taking his ease, and a breath of fresh air at last.

There is Aunt Watt crossing the street, on her way home to the bank from the druggist's, where she has been standing this half hour engaged in a friendly chat. Aunt Watt in her black bombazine and widow's cap, with strings flying out behind. Dearest, and best and most motherly of old ladies, she is Aunt Watt to us all, and is privileged to cross the street without her bonnet, which none of the rest of us would dare to do.

A little further afield and you may meet a father and his boys on the way home from the yards. For each cottage possesses its little garden; but these gardens stand at a furlong's distance from the village, grouped together, but each separated from its neighbour by a hedge of hawthorn. These are known as the *yards*, and in them flourish hardy vegetables and fruits, notably strawberries, gooseberries, raspberries, and black and red currants. Through the yards and down by the doctor's road is a favourite walk in the summer evenings. The scent of the doctor's sweet briar hedge after a summer shower is something which can never be forgotten. A few steps further and we shall be within sight of the parsonage. The click of the croquet balls tells us that the Dean is still at his favourite game, he will hardly see to strike the post though, without the aid of a friendly lantern. The sun has long ago set over the woody hill, but the faint glow remains. There are the Dean's daughters taking a stroll through the field, bare-headed, for are they not in their own domain? But the dew is falling, thick mists rise from the *Ugie*: the miller's door is barred for the night, the mill wheel is at rest. The air blows chill, midsummer night though it be, let us go in and warm ourselves by the kitchen fire, and so to bed. If we chance to be in the garret, with skylight open, we shall be lulled to sleep by the rushing waters of the burn as they fall over the mill weir.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN, Esq., Judge.—THURSDAY, December 18th, 1890.

THE STABBING OF A COURT OFFICER.

George Seymour, of the ship *Abyssinia*, was brought up to-day for trial on a charge of having stabbed William Nicol Wright, Usher of H.B.M. Court for Japan. The indictment set forth, first that the accused had wounded with intent to murder; secondly that he had wounded with intent to do grievous bodily harm, and thirdly that he had wounded the complainant with intent to prevent the lawful apprehension of himself.

Mr. H. C. Litchfield, Crown Prosecutor, ap-

peared in support of the charge; the prisoner was not represented by counsel.

Asked to tender his plea with reference to the charge

Accused pleaded guilty only to the second and third counts of the indictment.

The Judge then dismissed the jury, who had been summoned to try the case.

Mr. Litchfield, addressing the Court, said the accused had been charged with cutting an officer of this Court, and he had thought it his duty to frame the indictment so as to include with intent to murder. If unfortunately death had ensued from the act of the accused there could be no doubt that under the technical rules the crime would have been murder. Fortunately the wound inflicted was not of such a serious character, and the assaulted person had now recovered. The circumstances under which the stabbing took place would be seen from the depositions, but they were shortly these. Mr. Wright, constable and usher of the Court, was instructed to procure the attendance of two men at a trial before this Court during the course of last month, and at the same time a warrant was issued by the Court for the apprehension of the man Seymour, the accused, for being absent from his ship without leave. It was in attempting to carry out his instructions—in attempting to effect arrest upon this warrant, which at the time was, as usual, in the hands of the Japanese police—that Wright met with his injury. It seemed that on the 24th Oct. he met Seymour in the street, asked him his name—which at first he declined to give, saying that he did not know the ship *Abyssinia* at all—and having made further enquiries, and being sure of accused's identity, went up to arrest him. But before he touched him—as he was about to place his hand on the accused's shoulder, to make the arrest—the accused struck at him a violent blow and hit him—as it afterwards appeared—with a knife behind the ear. Blood flowed freely from the wound—according to the doctors' testimony there was considerable loss of blood. That was putting the mildest construction on the offence, and he thought it showed that the circumstances under which Wright was assaulted were entirely unprovoked and unwarranted.

The Judge—I have omitted to ask you, Mr. Litchfield, whether you accept the plea.

Mr. Litchfield—I presumed your Honour would gather from my opening remarks that I accepted the plea of guilty on the second count.

Asked by Mr. Moss, the Clerk of Court, whether he had anything to say,

Accused said he would like to address his Honour. He wished to say that he felt very sorry this had ever occurred. He did not know what tempted him to commit the act. He was now over forty years of age and had never been guilty of any such offence. He felt very sorry and hardly knew how to apologise to Mr. Wright. He had a poor old mother to support, and that fact hurt him more than anything else. He was sorry, and hoped the judge would be lenient towards him.

The Judge—Before passing sentence I desire to say a word or two of thanks to the Japanese who assisted in the arrest of the accused. It was a somewhat dangerous piece of work, and they acted promptly and with courage. If they had not been present probably the matter might have been more serious than it proved to be. (Prisoner—It was only a small, little knife, your Honour, and I had no intention. I had been drinking and sleeping out, and I do not know how I was tempted to do it. Being an Englishman I had no intention of using a knife.) The sentences that I have given prisoners are not only designed to be a punishment, but a deterrent to other people not to commit the same crimes. I must take that into consideration as well as all that you have said in your own excuse. There appears, so far as the depositions go, to have been no cause of provocation whatever. There seems at the same time to have been no deep premeditation, and there is evidence, which I shall accept, that you had the knife actually in your hand at the time. As to your being under the influence of drink there is no evidence in the depositions to support that. There is the mere assertion. It was tolerably early in the morning, and therefore there is no ground for supposing that you were under the influence of drink. (Prisoner—I can solemnly—). Please make no more remarks. Under all these circumstances, and remembering that imprisonment here is in many respects—and especially where it extends over the summer months—more severe than imprisonment in England, I am going to reduce the sentence that I should think it right to give you, to as low a point as I possibly can. It is absolutely necessary that all people should be protected from the use of the knife, but more especially that the officers of the

Court, who have often most dangerous duties to perform in arresting persons, should be protected from the dangers they so frequently have to undergo. Under these circumstances, and taking all you have said, and all I can gather from the depositions into consideration, I must sentence you to eight months' imprisonment with hard labour.

FRIDAY, December 19th, 1890.
THE BUNTING-DABBS CASE.

J. F. Dabbs appeared to-day on a judgment summons under an order of the Court in the recent action decided against him and in favour of his former employer, I. Bunting, the amount decreed being the taxed costs, \$671.50, less \$30 paid into Court.

Mr. Walford appeared for Mr. Bunting; Mr. Dabbs was not represented by counsel.

John Francis Dabbs, sworn, examined by Mr. Walford, deposed—I was plaintiff in the action of Dabbs v. Bunting. In that action judgment was given against me with costs, taxed at \$671.50. I did not know how much the costs were till I received the judgment summons. The only paper I have received was the summons requiring me to come here this morning. I have not received the judgment, it was probably served on Mr. Litchfield. I admit it, however. I have not paid any part of that sum. \$30 was paid into Court at the time of the action, but I have paid nothing since I lost the case. I am not in a position at present to make any payment. I think I can pay something in about two months. I have not received any money since I lost the case. I have not until now been in a position to pay anything.

You have not been possessed of any property or money since the action?—No; I arrived in Japan about August, 1888. I had then my clothing and in cash I had two \$5 gold pieces. I have not yet received the expenses I incurred on the passage.

Was this all the property you had in the world?—It was all that I had any control over.

What other property had you?—I had no actual property. I had some things that should have been closed, and I thought I would receive some money from them, but I got none. I left a power of attorney to settle up my affairs, my debts as well as my outstanding claims, but I have received nothing.

You recovered \$3,000 on an action in Penang?—Yes.

What had become of that?—Part of it was invested in business and furniture, and the remainder paid my wife's expenses out here.

How much was invested in business?—It was all invested except what we wanted to bring us out here. Part of the money was mine and part was my wife's, who lent me some to put in. Part of the \$3,000 was my wife's. It was recovered by my wife and me jointly. We had both been earning money, working for the same firm, and we entered the action together. The claim was not altogether by me. I could not tell now without referring to the accounts how much I claimed for. We both received the amounts of our salaries to the end of our contract, and then we paid our expenses home. I think we had \$500 damages. When we landed here I had \$10 in my possession. I have not received a cent from my business at home. I have written several times, but have never received an account. I cannot tell how much is owing to me. I left a man in whom I had every confidence—he was a magistrate's clerk—to sell the stock, to sell it as a going concern. I have heard that he sold the stock for about a sixth of what it was worth, in fourteen days after my departure, and then closed it up. I heard that he had received £30 for it.

Shortly after you came to Japan you took a house and bought furniture?—Yes.

Where did you get the money from to pay for that?—Part of it from my monthly earnings and part from an advance received from Mr. Bunting. Mr. Bunting advanced you \$250?—Yes. He was repaid, I forget how, it was taken off the profit, I fancy.

What has become of that furniture?—It was sold by Mr. Hall for rent. It realised somewhere about \$100, I think.

It was sold by your instructions?—By his own instructions.

By your instructions, Sir?—Possibly; it was sold for rent.

You instructed Mr. Hall to sell that furniture—under your instructions?—Be careful, sir, because I can prove that Mr. Hall was instructed by you to sell it. I cannot tell now who instructed him.

I shall bring evidence to show that you did.—I had none of the proceeds.

Did not you and Mr. Batchelor go together to Mr. Hall's?—Yes, we went together.

And when there you instructed Mr. Hall to sell the furniture?—Possibly I may have done so.

And to sell it in the name of Mrs. Dabbs?—I think the house was let to Mrs. Dabbs.

Now, you know you instructed Mr. Hall to sell it in the name of Mrs. Dabbs. You had better answer at once, for I can prove all these things.—I do not remember exactly.

Why was it sold in the name of Mrs. Dabbs?—I think the house was let in her name.

I have nothing to do with that; it does not make the furniture hers. Why in her name?—I do not know exactly. We owed Mr. Hall for rent.

To the Judge—I do not quite remember whether the house was let to me or to my wife. I do not remember whether I told Mr. Hall to sell the furniture in my wife's name. He said the rent must be paid; the furniture was sold, and he still holds the money.

To Mr. Walford—I think the furniture fetched about \$100, not quite sufficient to pay Mr. Hall what we owed for the rent.

At that time you had a case of jewellery and plate at Mr. Hall's?—I had no jewellery or plate of my own.

Whose was it?—My wife's.

How long has she had it?—She commenced to get it in 1883 when she began to earn money in her own right.

You obtained that plate from Mr. Hall?—I obtained it—yes, my wife did.

You obtained it; you asked for that plate from Mr. Hall, and you got it?—By my wife's instructions. Since the date of the judgment I have been engaged in business as a tailor, first in Kobe and afterwards in Yokohama, under the style of the British and American Tailoring Co. I was not in partnership with Mr. Batchelor. In December after the judgment, Mr. Batchelor and I discussed going into business together. Mr. Batchelor is an engineer and does not know anything about tailoring. He would not have anything to do with me at all, he was not going to put his money into a firm where you or Mr. Bunting could seize it for my debts.

You suggested that he should go in with Mrs. Dabbs?—I did not make any suggestions. My position was that I was willing to do anything. Mr. Batchelor discussed with his lawyer and with my wife the question of his going into business with her.

You did not discuss it at all?—No, Mr. Batchelor put his foot down on that at once. The thing was not argued. I did not tell Mr. Batchelor that the only way to protect his business from my creditors was to put it in the name of my wife. His lawyer told him so, but I did not.

I shall produce evidence that you did, that is all.—Very well.

Did not you tell Mr. Batchelor that you would put everything in your wife's name?—I had nothing to put in her name.

Did you tell Mr. Batchelor that?—I had nothing to put—

Answer my question. Did you say that?—No. I had nothing to put in her name—not a dollar.

Did not you say that you would put everything in her name and be a pauper and defy your creditors?—No sir, decidedly not. Mr. Batchelor and Mrs. Dabbs entered into an agreement of partnership, with my consent. I approved of the agreement. They were to share the profits equally and Mr. Batchelor was to supply \$3,000 capital, and that was all the capital of the business. I was to work without any salary from the firm; my wife was to pay me when she had it. She was to pay whatever she could afford; and would have done so and is willing to do so now. I recognise the document shown me as the agreement.

Mr. Walford—The agreement states that he is to work without salary. By the second clause the capital was \$3,000, to be put in by Batchelor, and in the 8th clause Dabbs is to give his best attention to the cutting and tailoring branch, without remuneration or emolument and to have no share in the profits.

Witness—That was my wife's arrangement with Mr. Batchelor, the outcome of a private arrangement between Mrs. Dabbs and myself. I received no money out of the business. I have done my share of the work of the business.

You have bought the cloth for the business?—Some of it. My wife has been consulted always, and I bought on her instructions. I have bought cloth in Kobe on her instructions. She has some experience and has taste—not quite as much experience as I have. She has taste, and I always consult with her. I measure most of the customers; I measure gentlemen and take their orders, and she attends to ladies, for we are also costume makers. At the commencement I consulted with Mr. Batchelor about buying cloth. Mr. Batchelor retired from active partnership after the first month. Most of the first stock was bought by Mr. Batchelor in Yokohama and a little in Kobe. He bought it all. That I think was in December. He was not consulted as to purchasing cloth after January. He had then

retired from the business and left it to my wife. He was consulted about a parcel from England. He said he would like to have it through an agent, and he and I went to Nickells' to see some samples there. I advised him that those samples were unsuitable, and I did not order them. They were ordered from home through an agent of Mr. Nickells who had to use his own judgment to a very great extent. I wrote a letter to the man in England, for the company, and signed it for the company. I was absent for ten days in Shanghai. During that time there could not be very much business. Some orders were taken by my wife. I think for three pairs of riding breeches, among other orders—and I measured the parties when I returned. It was the same way when I went to Yokohama. I went to Shanghai to see about my appeal in the action. I appealed as a pauper, and the Court refused to allow me to go on as a pauper. The balance sheet and stock account shown me are in my handwriting. They are made up to 30th June and by my wife's instructions. Mr. Batchelor put into the business stock to represent \$3,000, and he advanced \$1,000—in all \$4,000. The cash we received from customers amounted to \$2,722, and there was owing by customers \$623.27, the item of discounts and allowances being those allowed to customers for various reasons amounting to \$27. At the date mentioned we had \$1,327 worth of stock.

In addition to that, the assets of the firm included rent that you had not paid for your private residence?—There was no arrangement for us to pay any rent.

You had the shop and rooms all in one house?—Yes, the whole company lived there. Mr. Batchelor lived there till he found it was not convenient to do so.

He lived there until he could not live any longer with you?—I have no wish to injure Mr. Batchelor, but if you wish I shall tell you what the reason was. Mr. Woodford took an account to please Mr. Batchelor. He said he was asked to make the statement about rent due by me to Batchelor, but he did not agree to it.

You think you should have had it rent free?—I do not think anything about it. There was a lot of furniture bought by Mr. Batchelor, and put in for the general use of the partners. I account here for \$462½ for trimmings, and I think there were then about \$100 in stock. I had spent in wages \$567 and other expenses amounted to \$563. I do not know whether \$245 was spent on furniture. I did not spend any money on it. (Documents put in.) Shortly after that, the making out of the account, Mr. Batchelor retired from the business. I think in July. He received \$1,750 to go out of the business. For that sum everything—stock and everything—was taken over by Mr. Batchelor.

The Judge—Only \$1,750; how about the \$3,000 and the \$1,000?

Mr. Walford—He paid in \$4,000, and got out only \$1,750.

Witness—Mrs. Dabbs was allowed to draw \$100 under the 10th clause of the agreement as necessary for current expenses. She drew that money. About that time I received notice that Mr. Bunting would place no obstacle in the way of my doing business in Yokohama. My wife is carrying on business under the same name, British and American Tailoring Co. The premises are at No. 52, Main Street. I think the rent is \$50 a month, with living rooms over the shop. I don't pay the wages. I know whom Mrs. Dabbs employs. I think she has just now 11 or 12 people. They are all paid by the piece. Five Chinamen I think there are, and three Japanese.

This concluded Mr. Walford's questions and Mr. Dabbs asked permission to make a statement. He had answered all Mr. Walford's questions and wished to say something by way of explanation. As to the order, he said he did not know that if he could not meet it he had to come forward and explain his position. When he lost the case he had nothing in the world; he could not support his wife, and it became necessary for her to support herself. No man would be foolish enough to put money into a business that could be seized for debts due by deponent. I made an arrangement, he went on to say, with my wife. She joined Mr. Batchelor in business for her own support, and shortly after Mr. Batchelor retired from the active management and left her in sole charge. Had that business paid she would have given me money with which to pay off my debts. She was allowed \$100 a month, and Mr. Batchelor was allowed to draw a like amount if he wished. The \$100 might not have been necessary to carry on the expenses of the house, but as I was then *sine in forma pauperis* and had not got the attention I expected, my wife advised me to go to Shanghai, took a steerage ticket for me and sent me over at the

lowest rate. Possibly I had thus a little more expenses. The business for the six months showed a loss of \$392.50. The books have been audited by an auditor who certified their correctness. As the business did not pay as well possibly as Mr. Batchelor had expected, he retired and my wife bought the business under a bill of sale. She was not able to pay down the money. In such a business where money is sunk it cannot be realized in six months. To meet the bill of sale my wife had to borrow money elsewhere, in which she had considerable difficulty, and she has not quite succeeded in paying it off. She is anxious to help me to free myself from my debts, and as soon as she is in a position she will give me a salary. She would have done so before, but the business showed a loss. It has since taken her nearly all the time to clear off the purchase money of the business. Of course I bow to the judgment of the Court. I must pay this money, but the account rendered after the closing of the last case is not a correct one.

The Judge—I cannot go into that. There is a judgment of the Court that you must pay that amount of money and that is quite sufficient. I cannot go back.

Mr. Walford said he had summoned Mrs. Dabbs, but he thought all the information necessary was before the Court. Mr. Bunting did not want to injure Mr. Dabbs; and was willing to take payment in instalments.

The Judge—How much of this \$1,750 remains to be paid?

Witness—\$236.

The Judge—How long will that take?

Witness—My wife will have to pay that off next month.

Here witness, who had spoken of wishing "the Court to distinctly understand" something, was brought up by the Judge, who pointed out to him that such language could not be allowed. The witness begged pardon, and said his reason for being employed by his wife was that he could not get a berth elsewhere. He should be able to make a payment after next month. If the business pays well he believed his wife will give everything. He did not know how much that will amount to. His wife must pay off the remainder of the bill of sale. She had already let the stock run down so low that there was difficulty in going on.

Mr. Walford pointed out that when Mr. and Mrs. Dabbs came up from Kobe they had a large stock which they had received from Mr. Batchelor.

Witness said the whole of the money except the actual expenses had been paid by his wife to get the proprietorship of the business. His wife authorised him to say that she would allow the registrar of the Court to examine the books to show that witness had acted honourably.

Mr. Walford said he needed hardly argue the question that the whole of the property was subject to this judgment debt, but if his Honour wished he would argue the point. Mrs. Dabbs had nearly \$2,000 in hand when she left Kobe and came to Yokohama, according to the account made up by Dabbs himself, and they were carrying on business apparently in a flourishing way. Mr. Bunting was asking very little indeed when he asked the costs of this summons and \$50 a month.

The Judge said he would make an order that the debt should be paid at the rate of \$50 a month, and thought Mr. Bunting was entitled to the costs of this summons. But what advantage would Mr. Bunting get out of such an order? And if he got no advantage why should such an order be made?

Mr. Walford said Mr. Bunting asked for that order.

The Judge remarked that creditors often thought they got an advantage by this course—there might be peculiar circumstances under which they got advantages by the making of such an order, but his Honour left it entirely to Mr. Walford and his client to say whether it was any advantage in this case. In the present instance there was no evidence that an actual salary was paid, and therefore they could not get at an actual salary paid on a particular date. Then if they had an order that Mr. Dabbs was to pay \$560 at once, what advantage was it to ask that he should pay \$50 a month?

Mr. Walford said if it was not paid he could proceed to strong measures. Such an order allowed Mr. Dabbs to continue in trade, but told him if he did not pay the creditor would take strong measures.

The Judge—I will say no more. You know your own business best. It will be only reasonable that Mr. Dabbs should pay \$50 a month.

Mr. Dabbs asked that the order should make the first instalment payable on the 10th of February.

Mr. Walford thought the payment should begin at the end of one month. The assets were so enormous compared with the debt.

The Judge said it was a question that assumed that the creditor could issue execution on the whole of the property. There was a bill of sale on it.

Mr. Walford said there was only \$200, a small amount.

The Judge said he did not want to go into the question of whether the whole of that property was seizable.

Mr. Walford then intimated that he would take \$50 a month from February.

An order was made for the payment of the judgment debt and the costs of this judgment summons (\$25) by instalments of \$50, the first payment to take place on the 10th of February next.

Hongkong, December 11th, 11.55 a.m.

The Douglas Co.'s steamer *Namoa*, Captain Pocock, 1,375 tons gross, has been pirated by her passengers near Hongkong, who killed the captain and two others, stole \$20,000, and escaped in junks.

The P. & O. steamer *Hongkong*, Captain Watkins, has gone ashore, probably in the Red Sea, and is expected to be a total loss. She left Hongkong homeward bound on the 7th of November.

(HONOR. JOSEPH EDGAR, A.R.A., sculptor, was born in Vienna, July 6, 1834, of Hungarian parents. His father was Director of the Mint in the Austrian Empire, and possessor of a celebrated private collection of works of art. He was educated at Vienna, and from 1848 to 1851 in England. He studied also in Italy, and for three years in Paris, but has been settled in England since 1865. He received the first Imperial Prize, and exemption from military conscription in Vienna in 1856. He was elected a member of the Academy of Florence in 1875, and an Associate of the Royal Academy of London, Jan. 16, 1886. Mr. Boehm executed a colossal statue in marble of the Queen for Windsor Castle in 1869; also a monument of the Duke of Kent in St. George's Chapel, and bronze statues of the Prince of Wales and all the Royal Family for the Queen; also a colossal statue of Bedford for John Bunyan, 1891; and another of the Duchess of Bedford for the Park, Woburn Abbey, in gilded bronze, 1894; a statue of Sir John Burgoyne in Waterloo Place; a colossal equestrian statue of the Prince of Wales for Bombay, 1897; a statue of Thomas Carlyle; a monument at Deane to Lord Cardigan; a monument at Aldershot church to Sir York Scarlett; and a horse group in bronze for Eaton. In 1879 a colossal equestrian statue of Lord Napier of Magdala; a colossal statue of Lord Northbrook, both for Calcutta; a marble statue of the late King Leopold of Belgium, for St. George's Chapel at Windsor; and a colossal statue of Sir William Gregory for Ceylon. He has also executed busts of Mr. Milne, the late Lord Lansdowne (now in Westminster Abbey), Mr. Whitelock, Lord Shaftesbury, and Sir Henry Cole, a marble statue of Lord John Russell for the Houses of Parliament, and he was commissioned by the Queen to execute a recumbent statue of the late Princess Alice and her daughter, Princess Maud, for the Royal Mausoleum at Frogmore, and a replica of it for Darmstadt. After the death of the Prince Imperial he was commissioned to execute a recumbent statue of him for Westminster Abbey; but public opinion being strong

against its being placed there, it was transferred to St. George's Chapel, Windsor. Mr. Boehm was elected a member of the Academy of Rome in 1880, and a full Academician by the Royal Academy here in Jan. 1888. A colossal statue in bronze of Lord Lawrence, which he executed for Waterloo Place, he lately replaced with a new one, not being satisfied with the effect of the first; and a statue, in feet, of Lord Beaconsfield for Westminster Abbey, and he has also done a marble statue of Lord Stratford de Redcliffe and the late Dean Stanley, both for Westminster Abbey. A recumbent effigy of Dean Duncombe for York was executed by Mr. Boehm from one of Mr. Street's last designs; also one of the late Duchess of Westminster. Mr. Boehm has made busts of Mr. Gladstone, Mr. John Bright, Mr. Rusk, Sir William Paget, Professor Huxley, Lord Wolseley, and Sir Henry Acland, from life, and also a medallion of the Queen, which will serve as a model for the new coinage. He was nominated in 1881 Sculptor Ordinary to the Queen, and he has delivered lectures on sculpture in the Royal Academy. In Aug. 1882, the gold medal given by Austria-Hungary at the Vienna Art Exhibition was awarded to Mr. Boehm. He has received sittings from the Queen for a new bust which was by desire of the Crown Princess given by the Queen as the Silver Wedding present in 1893; and has been commissioned by the Government to execute an equestrian statue of the Duke of Wellington for Hyde Park Corner, to replace the one by Wyatt which was transferred to Aldershot; and he is at present engaged on a colossal statue of the Queen for Sydney, Australia, and a recumbent statue of General Gordon, which his brother, Sir Henry Gordon, is having done for St. Paul's Cathedral. He has also executed marble busts of General Gordon and Archbishop Tait for the Queen, and a recumbent effigy of Archbishop Tait for Canterbury Cathedral. In addition to these he executed a marble statue of Sir Ashley Eden for Calcutta, a recumbent statue of the late Dean of Windsor for St. George's Chapel, and received a command from the Queen to do the effigy of H.R.H. the late Duke of Albany in Highland costume for the Albert Chapel at Windsor, and busts for the Mausoleum and Balmoral Castle; and also did a statue of Lord Somerset for Eastnor Castle, and one of Darwin for the new Natural History Museum at South Kensington, and a Medallion of Darwin for Westminster Abbey. Mr. Boehm has not abandoned his animal studies, having lately executed in bronze a portrait of the Duke of Portland's celebrated racehorse Sir Simon, the horse Cremorne for Mr. Savile, a life size statue of King Tumb for Mentmore, a colossal lion and lioness for Lord Leicester at Holkham, besides many celebrated horses for Lord Rosebery and the late Baron Rothschild; and a sea-lion in black marble which acts as a fountain in Sir John Millais' house. He is at present engaged upon a life-size bull with his leader, in marble, which was exhibited last year at the Royal Academy, and a large equestrian bronze group of St. George and the Dragon. A memorial to General Sir Herbert Stewart for St. Paul's has also lately been begun, and will be placed, when finished, near to the recumbent figure of General Gordon.—*Men of the Time.*)

TIME TABLES AND STEAMERS.

TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6.05 * 6.40, 8.35, 9.30, * 10.25, and 11.45 a.m., and 1.25, 2.30, 3.55, 4.45, * 5.50, 6.50, 8.30, 9.55, and 11.15 p.m. UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.20, 8.10, 9.15, * 10.22, and 11.30 a.m., and 12.45, 2.30, 3.45, * 5.30, 6.35, 7.50, 9.10, 10.05, and 11.05 p.m.

KEROSENE.

Sales of 25,000 cases Russian reported at \$1.57 1/2. Demand for American oil does not seem quite so strong, although holders expect more movement after the turn of the year.

QUOTATIONS.

Chester	\$1.65 to 1.67 1/2
Comet	1.64 to 1.65
Devoe	1.60 to 1.62 1/2
Russian	1.55 to 1.57 1/2

SUGAR.

Nothing to report in the Sugar trade.

White Refined	\$5.50 to 7.90
Manila	3.60 to 4.30
Taiwanfou	
Pentana	2.75 to 3.00
Namida	2.80 to 3.00
Cake	3.10 to 3.80
Brown Takao	4.15 to 4.20

EXPORTS.

RAW SILK.

Our last issue was of the 12th inst., since which date settlements are entered as 325 piculs:—*Filatures*, 65; *Re-reels*, 126; *Kakadas*, 119; *Oshu*, 25; while *Hanks* give rejections of 10 piculs. In addition to these figures direct shipments have been 65 bales, making a total business for the week of 400 piculs.

During the first two days business continued on a good scale; then came the sudden jump in Exchange which has stopped all trade. There are a fair amount of orders in town both from Europe and America, but with present rates of exchange, and a threatened further rise, there seems no chance of filling them. Holders here are unable at present to reduce their prices in a corresponding degree.

Arrivals now are very small, and in spite of the feeble trade, stock is reduced somewhat on the week. There is also talk of a syndicate to assist the weak holders in carrying their goods until better times. Whether this come off or no it is certain that native dealers will not submit to further heavy losses without a struggle. They are willing to make a small reduction on last week's rates but at the moment will not or cannot afford to reduce their prices to a point which will suit shippers.

There have been two shipping opportunities since we last wrote: the English and American Mails. The former, *Verona*, on the 13th instant, had 478 bales for Europe. The latter, *City of Peking*, on the 16th instant, had 276 bales for the United States. These departures bring the present export figures up to 11,446 piculs, against 25,335 piculs last year and 23,454 at the same date two years ago.

Hanks.—There has been no business during the week, and on inspection about 10 piculs of former purchases have been rejected. There are orders in hand which cannot be executed, owing to the high rates of exchange which are now current. Stock in this department is very small, and holders will not reduce their quotations to any appreciable extent.

Filatures.—Fair amount of buying at the beginning of the week, but since then the rise in Silver has caused some rejections, and the total business has been small. Quotations are unchanged and at the close there is absolutely nothing doing. The stock in this department is large but the majority of holders are also large. Some of them openly declare that silk is as good as money to them, and they do not feel disposed to entertain the idea of ruinous losses.

Re-reels.—Fair amount of business has been done in medium grades for Europe, trade for the United States being very small. For the latter market chief purchases have been two parcels of good *Josho* at \$555. One parcel of *Yechigo* brought \$550. The holders of prime marks like *Tengensha*, *Five Girl*, *Tortoise*, *Kanra*, and similar high class silks are strong and firm in their attitude.

Kakada.—Holders in this class have been fairly current all through the season, but the last strong rise in Exchange has put even them out of count for the present. They refuse to go on at the necessary reduction and trade stands still accordingly.

Oshu.—Two or three small parcels were booked for Europe; Good *Hamatsuki* bringing \$535; with medium at \$500. A small parcel of common *Sendai* was also done at \$500.

WASTE SILK.

Trade in this branch has been on rather a larger scale; settlements for the week being 720 piculs, divided thus:—*Noshi*, 215; *Kibiso*, 430; *Mawata*, 75.

Buying is still confined to a few hands and purchases are, as before, mostly for Europe. Prices for good quality are well maintained and the stock list slowly declines, *Noshi* being especially scarce.

The English mail, *Verona*, took a fair shipment both of Waste and Cocoons. The American mail had 90 piculs of *Mawata* for the United States. Total shipments to date are now 15,335 piculs against 13,516 last year and 16,197 to the 19th December, 1888.

Pierced Cocoons.—No business at all in these, and it will be noted that the export to date is not much more than half of what it was last year.

Noshi.—Small purchases in *Filatures* at from \$145 to \$150. A good line in *Hachoji* at from \$130 to \$145; some extra *Filatures* \$153. Nothing done in *Josho*.

Kibiso.—Fair amount of business here, all kinds being dealt in from *Filatures* at \$115 down to ordinary *Shinshu*, *Techigo* and *Oshu* at \$50.

Mawata.—Further purchases of ordinary *Irikin*, mostly old crop, have been reported at \$185 and \$180.

No business in *Aeri* or *Sundries* but a little *Kuzuto* has been done at \$75.

CHELTONHAM COLLEGE JUBILEE.

ARRANGEMENTS are being made to Celebrate the 50th Anniversary of the Existence of the College in June or July next, which will include an O. C. Dinner, Cricket Matches, and Greek Play at the College. Further notice will appear.

A. GWYNNE-JAMES,
Hon. Secretary of Cheltonian Society,
2, Temple Gardens, London, E.C.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

**STEAM LAUNCHES & YACHTS,**

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
BARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
161, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams:—Wadham, London. 1y. June 28, 1890.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAU WORMS**. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribulations in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1891, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

**YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.**

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 27, 1890.

BIRTH.

On the 19th inst., at the Yokohama Dairy, Negishi, the wife of Mr. W. T. RICHARDS of a Son.

DEATHS.

At Winchester, Mass., U.S.A., November 15th, 1890, Captain GEORGE F. NICKERSON, in his 67th year, the dearly beloved father of Mrs. Theodore J. Morris and Miss Nickerson of Yokohama.

At No. 31, Bluff, on the 26th instant, of pneumonia, CHARLES EDGAR, youngest son of William S. Mitchell, of Bushey, Hertford, aged 24 years. The funeral will take place at 10 a.m. on Sunday.

SUMMARY OF NEWS.

PRINCE SANJO entertained the Ministers of State and various peers on the 21st instant, at his residence.

VISCOUNT TORIO, a member of the House of Peers, sent in his resignation of his seat on the 22nd inst.

THE Government Departments will be closed on the 27th instant and opened on the 6th of next month.

DURING last month, 32 persons were attacked by cholera in the capital, of whom 12 were males and 18 females.

MR. T. KAWAKITA, who was lately appointed *Chargé d'Affaires* at Sôul, will leave Japan on the 28th instant for his post.

COUNT GOTO, Viscount Aoki, and Messrs. Yoshikawa and Mutsu attended the sitting of the House of Peers, on the 19th instant.

AN extraordinary general meeting of the shareholders of the Japan Railway Company was held on the afternoon of the 19th instant at the Kosei-kan.

MR. KOKUSHI JUNSEI, a member of the House of Peers, who had been suffering for some time from inflammation of the lungs, expired on the 18th instant at 3 p.m.

MESSRS. MASUDA and Shimizu of Saitama Prefecture, and Amamiya, Umagoshi, and Yone-

kura of Tokyo, have applied to the Authorities for permission to lay a railway between Kawagoye and Kokufuji, Saitama Prefecture.

THE Prince Imperial will proceed shortly to Shizuoka Prefecture, leaving the capital on the 8th of next month. It is expected that the Prince will stay for a few weeks.

IT is stated that the sittings of the Upper and Lower Houses will be closed on the 25th and 27th instant respectively, and be opened again on or about the 4th of next month.

ACCORDING to a report issued by the Authorities, the number of *shizoku* who are entitled to participate in the benefits of the Tokyo *Shizoku* Fund, is about 40,000.

THE PRINCE IMPERIAL proceeded to the Palace on the afternoon of the 22nd instant and had an interview with Their Majesties the Emperor and Empress, returning to the Palace about 4 p.m.

THEIR MAJESTIES THE EMPEROR, EMPRESS, AND EMPRESS DOWAGER purchased pictures at the Exhibition of Paintings in Uyeno Park some time ago, amounting in the aggregate to yen 745.50.

IT is stated that Mr. Okura Kihachiro, President of the Nippon Dohoku Kaisha, will leave the capital for China about the beginning of next month, to tender for the contract of laying a new railway.

HIS MAJESTY THE EMPEROR despatched Count Nishisanjo, a Chamberlain, to the residence of the late Rear-Admiral Kunitukasa on the 21st instant, with a present to the bereaved family of two rolls of silk.

THE Korean Minister recently paid a visit to the residence of a well known agriculturist at Minami-cho, Aoyama, named Izumi Itaro, with whom he had a long conversation as to methods of cultivating tea.

THE ceremony of formally organizing the *Kokumin-Jiyu* party was held on the afternoon of the 21st inst. at the Nakamura-ro, Ryogoku. The occasion was attended by more than three hundred members of the party.

AN extraordinary Cabinet meeting was held on the 22nd instant, at which there were present Counts Yamagata, Saigo, and Oyama, and Mr. Yoshikawa, the proceedings lasting from the forenoon till half-past three in the afternoon.

HIS IMPERIAL HIGHNESS PRINCE KOMATSU entertained members of the Imperial Family, the Ministers of State, the Foreign Representatives, and other distinguished guests on the evening of the 19th instant at his residence at Surugadai.

AN outbreak of fire took place in the house of Shimizu Toyojiro, Aomi-mura, Nishikeijogori, Niigata Prefecture, on the night of the 16th inst., and destroyed 69 buildings, and 103 sheds used for storing boats, before the flames could be subdued.

MR. MAGAKI JOCHO was appointed private secretary to the Minister of State for Justice, on the 20th instant, being raised to third class *sonin* rank, and Mr. Yamataka Shuri, Director-General of the Imperial Museum, was raised to first class *sonin* rank on the 22nd instant.

THE funeral of Major-General Kunitukasa, a member of the House of Peers, took place on the 21st instant in Tokyo, the ceremony being witnessed by a large concourse of people. The

coffin was guarded by a military escort. The interment took place at the Aoyama Cemetery, the ceremony being conducted in accordance with Shinto rites.

DURING the week, the House of Peers has passed, by a large majority, the Bill for the postponement of the operation of the new Commercial Code until 1893. The House of Representatives has passed a Bill for the abolition of the Peace Preservation Regulations, and a Bill for amending the periods for paying the fixed instalments of the Land Tax.

SHIPPING casualties have been numerous among the fleet of the Nippon Yusen Kaisha this month. First the *Harima Maru* went on shore in a gale, but has just been got off and towed to port; next the *Tokyo Maru* was run on shore making for Yokohama, and she is not yet in port; the last is the *Kii Maru*, which is on shore in an exposed position, and is reported to have become a total wreck.

THE opening ceremony of the new buildings of the Agricultural School erected at Katsuyama, Tsuruhashi-mura, Seto-gori, Osaka, was held on the 21st instant, at which Governor Nishimura, Mr. Sato, Assistant Director of the Agricultural and Commercial Department, the members of the Osaka City Assembly, and some four hundred other influential persons of the neighbouring districts were present, Governor Nishimura, Mr. Sato, and others addressed the meeting.

THE following officials of the Agricultural and Commercial Department have been rewarded by the Government with presents of money in recognition of services rendered by them at the recent Paris Exhibition:—Mr. Yanagiya Kentaro, a Councillor of the Department, yen 250; Messrs. Yamada and Komai, yen 200, Messrs. Nakada and Narushima, yen 100, and Messrs. Sakai and Aikawa, yen 30 each.

THEIR Imperial Highnesses Princes Komatsu Akihito and Fushimi Sadanasu, Viscount Hijikata, Minister of State for the Imperial Household, Counts Kuroda, Okuma, and Yanagiwara, members of the Privy Council, Marquis Tokudaiji, Grand Chamberlain, Marquis Asano, Count Ogimachi, Viscount Kagawa, Grand Master of Services to H.I.M., the Empress, Count Toda, Envoy Extraordinary and Minister Plenipotentiary, and other nobles of high rank had the honour of dining with the Emperor on the 19th instant at the Palace.

THE Import trade continues in much the same condition as last reported. A few bales of Yarn have been sold, and an intermittent demand for small parcels of Shirtings has been made, but the total is insignificant, and no other Piece-goods command the smallest amount of attention. The Metal market is quiet, the actual business being extremely small. Kerosene is unchanged in value; and the lower offers made meet with no response. Nothing has been done in Sugar, and there is no immediate prospect of a demand. The fluctuations in Exchange induced bargains in Silk when the rates ran down, and seven hundred piculs have been put through during the week. Referring to last year's business it is seen that the crack chops of Shinshu filatures were sold this time last year for \$200 per picul more than they fetched this week. Arrivals are falling off somewhat, and a few parcels have been withdrawn from the market. Business in Waste Silk has not been quite so brisk. The Tea trade is now reduced to retail dimensions, and only about 3,000 piculs of leaf of common to medium grades are left in stock. Exchange has again fluctuated, and is lower on the week's variation of rates.

EDITORIAL NOTES.

IMPERIAL JAPANESE DIET PROCEEDINGS.
HOUSE OF PEERS,—DECEMBER 19TH.

The House assembled at 10.30 a.m. The President announced the names of the Committee to revise the Rules of the House; also various changes in the personnel of the other Committees now sitting. The House then proceeded to consider a Representation introduced by Viscount Tani in reference to Customs Dues. Viscount Tani explained that doubts might be entertained as to the propriety of the Representation he proposed, in view of the fact that the Government is now engaged in the task of Treaty Revision. But the public, in common with himself, knew very little about the Government's programme of Revision, nor had much been learned from the speech delivered by the Minister for Foreign Affairs in the Lower House on the 17th instant. Treaty Revision, he said, was a subject that caused him the greatest concern. The guiding principle of the intercourse of nations now-a-days was self-interest. Each sought its own commercial aggrandisement. If, in this struggle, a country fell behind its rivals owing to want of capacity or capital, it had no complaint to prefer against them. But if it was compelled by *force majeure* to carry on its foreign trade under the terms of a disadvantageous covenant, and if its industries and agriculture suffered in consequence, the case appealed to the patriotic instincts of all its nationals. Such were Japan's circumstances. As the Foreign Minister had explained in his speech, the original tariff of 1858 allowed Japan to levy duties of from 20 to 30 per cent., but the tariff of 1866 had reduced the rate to a maximum of 5 per cent. Japan was then ignorant of the outer world, and of the ways of international trade. She suffered for her ignorance. Foreigners were not to blame for driving a hard bargain with her. Since then, however, Japan had left nothing undone to cultivate the friendship of Western nations and to instruct herself in their condition. She had, moreover, introduced all sorts of reforms of Occidental type, and had given the strongest proofs of her desire to act fairly and be acted fairly by in return. Yet to this day Treaty Revision remained unaccomplished, though the time when the country became entitled to demand it was now nearly twenty years old. To this day the same covenant that was contracted with the empire in the era of its infancy, was enforced without change. Justice and Reason were outraged by such a state of affairs. Fortunately the birth of representative institutions in Japan opened the road to an appeal to public opinion. Such an appeal he considered it the duty of every lover of his country to make; an appeal to the Japanese people to help themselves, and an appeal to the moral sense of Western statesmen, who must see that to keep Japan to the terms of covenants contracted in the infancy of her foreign intercourse and totally unsuited to her present condition, was indefensible. The statistics of the country's foreign trade showed that from the beginning of the Meiji era until June of this year, imports had exceeded exports by nearly 148 million yen; in other words, from five to six million yen of Japanese money went into the pockets of foreigners every year. Such a state of affairs was incompatible with sound finance, and he was sure that if foreign Powers could be brought to consider the facts, they would not seek to prolong the present Treaty. Moreover the exchange of raw products for manufactured articles was a proceeding that recalled the days of medieval ignorance and uncivilization. Yet it was Japan's proceeding now. Various attempts to start manufactories had been made in Japan, but they had not achieved success, and the people were obliged to fall back on the sale of raw products. It was in truth a lamentably dark outlook. Silk, for example, produced in such large quantities and of such excellent quality in this country, ought also to be worked up here, but though the Japanese were fully competent to do this, they were prevented by the fact that their tariff

was not under their own control, but had to be limited by the terms of an old covenant. In a word, Japan was a species of hollow place into which the stream of imports poured its waters, and until steps could be taken to build a dam against the ingress of the flood, it would be impossible to utilize the nation's industrial capacities. The certain end must be financial difficulties, out of which a temporary exit would be sought by foreign loans, a first step towards the downfall of the Empire. People busied themselves about local government, the compilation of codes of law, or administrative reforms, and called this progress, but they remained in ignorance that the strength of their country was monthly ebbing away, and that unless something were done to stay its decay, their fine measures would one day become an empty farce. The Ministers of War and of the Navy had talked a good deal the other day about increasing the military equipment of the empire, but if the national finances were in a state of disorder, what good purpose could military armaments serve? It was not the act of wise statesmen to look to the branches only of the tree, leaving the root untended, and he called upon his fellow-members to join with him in presenting a strong Representation to the Government. Mr. Kato Hiroyuki, President of the Imperial University, opposed the motion. He explained that he fully agreed with the spirit of the Representation, and with the arguments advanced by Viscount Tani. What he objected to was the fact of presenting such a Representation at the moment when the Government was known to be engaged in the task of Treaty Revision, and to be seeking by every possible means to recover the country's Tariff and Judicial autonomy. To make the Representation now would be like reminding a sick man of his condition, while his doctors were actually seeking to prescribe for him. Mr. Tomita Tetsunosuke supported the motion, urging that every country in the world had developed its industries by protective measures, England herself not excepted. Mr. Yamaguchi Shobo made a long speech in support of the proposal, but confined himself chiefly to adducing examples and statistics. The House then took a recess, and re-assembled at 1.15 p.m., when Mr. Ozaki Saburo rose to oppose the motion. He was emphatically in favour of recovering the country's Tariff autonomy, but he thought that the recovery of her Judicial autonomy was more important, and he therefore objected to precedence being given to the former. He did not think that Japan could hope to vie with the Great States of the West in commerce and industry, but at any rate the imposition of heavy import dues was not the way to assist that consummation. A heavy import tariff might bring money into the national exchequer, but it would not enrich the country, for though foreign importers would have to pay the tax in the first place, it must ultimately come out of the pockets of Japanese consumers. He thought it much more important to assert the national dignity by abolishing extraterritorial jurisdiction. Mr. Miura Yasu combated the argument that the Representation should not be made inasmuch as the Government was already engaged in trying to effect the recovery of the empire's Tariff autonomy. From what the public had been able to gather, it appeared that attempts to revise the Treaties had failed repeatedly, and that the Authorities were perplexed how to proceed. He thought that the support and advice of the people, offered through their representatives, could not fail to strengthen the Government's hands. Viscount Matsudaira Nobumasa approved the views of the last speaker. Mr. Okauchi Shigetoshi opposed the motion on the grounds that the Government was already engaged in negotiations for Treaty Revision, and although the nature of the negotiations was kept secret, in accordance with the practice in all countries, there could be no doubt that the recovery of Tariff and Judicial autonomy was the chief aim in view. He objected strongly to any pre-eminence being given to Tariff autonomy. Mr. Watanabe Kyoshi was of the same opinion. He judged that the ques-

tion of Judicial autonomy was the real crux of the Treaty Revision problem, and he said that to put Tariff autonomy in the forefront could only complicate the situation. Professor Toyama asked the mover of the Representation what clues he followed in order to arrive at his estimate of public opinion. The speaker did not know that any means of gauging public opinion except the newspapers had existed up to the present, and the newspapers were not always consistent. Last year they had denounced Revision on the ground that sufficient preparation had not been made in the interior; this year they advocated Revision on equal terms. But could it be safely inferred that sufficient preparations were now completed. So far as he could judge the abolition of extraterritorial jurisdiction was regarded by public opinion as the really important feature of the question. Viscount Tani acknowledged the justice of Professor Toyama's question, and said that what he also aimed at was the recovery of both Judicial and Tariff autonomy. He appreciated that the Judicial question was of great importance, but he thought that the Tariff question was the more essential. Viscount Torio said that he supported the proposal, but he considered that the House ought not to debate it at length, and he accordingly moved the closure. The President called for a division, and a majority voted for the proposal.

DECEMBER 20TH.

The House assembled at 10.30 a.m. The President announced that the Representation on the subject of Tariff autonomy, voted by the House the preceding day, had been forwarded to the Government. Marquis Hachisuka, in his capacity of President of the Committee on Memorials, informed the House that a memorial received from Tochigi Prefecture on the subject of the Confectionary Tax had been pronounced out of order, and would not be submitted to the House. The House then proceeded to consider the Bill, sent up from the Lower House, for the postponement of the date of operation of the new Commercial Code. Mr. Watanabe Jinkichi said that as such a short interval remained before the date originally fixed for the operation of the Code, he and a number of other members whose names he read, thought that the Bill ought to be decided at once without proceeding to a second and third reading. A proposition was also made that the election of the Committee to examine the Bill should be entrusted to the President, and that the Committee should be limited to a time for submitting its report. Both proposals were approved, and it was decided that the Committee must lay its report before the House at 2 o'clock in the afternoon of the same day. The House then took a short recess, and on its re-assembly the President read out the names of the Committee appointed to examine the Bill. Mr. Watanabe Kiyoshi opposed the Bill, and affirmed that, the Commercial Code being independent of the Civil Codes, no reason existed for their simultaneous enforcement. The President announced that a decision should now be taken on the proposition to dispense with a second and third reading. Mr. Ozaki Saburo opposed the motion. He thought the question too important to be decided off-hand. Whatever course might seem advisable after the first reading, he was emphatically opposed to committing the House to anything of the kind proposed before the Bill had been considered at all. The motion was then put and lost. Over a hundred members voted for it, and over 70 against, but as the Law requires a two-thirds vote, the proposition was lost. Mr. Watarai Masamoto opposed the Bill on two grounds. In the first place, he thought that the course the House was asked to take was unconstitutional. The 6th Article of the Constitution provides that the Emperor gives sanction to laws and orders them to be promulgated and executed, and though the 38th Article empowers the House to initiate projects of law, it does not confer any competence to fix the date of putting a law into operation. The House could only make a Representation on the subject. Secondly, as to the particular question of the Commercial Code, the arguments of its opponents might be briefly

summed up. They were, first, that as the first clause of the Commercial Code provided for its enforcement in conjunction with the Civil Law, the dates of enforcing the Commercial Code and the Civil Codes should not be different. Secondly, that the new Code was opposed to Japanese traditional usages, and that its text was difficult to understand. Thirdly, that an interval of only a few months was not sufficient to allow between the promulgation and operation of a Code requiring so much study. With regard to the first point, it must be observed that the Commercial Code is, in fact, an independent piece of legislation. The reference made in its text to Civil Law was purely precautionary. It might happen that in the varied transactions of business something not fully provided for in the Code should occur, and in that event recourse was to be had to the Civil Law for supplementary purposes. No reason existed for making the date of operation of the Commercial Code depend upon that of the Civil Codes. As to the second point, they had to remember that in these days of developing commercial intercourse with foreign peoples, to shrink from the introduction of a new custom would be absurd. The objection about textual obscurities had no better claim to attention. It was inevitable that novel terms should be employed in the compilation of Japan's first Commercial Code. Finally, no new law had ever yet been promulgated that did not, in convenience some one, or seem difficult of comprehension to certain folks. On the other hand, this Commercial Code would confer great benefits not on the trading classes alone, but on society at large. He further reminded the House that several Ordinances had been already promulgated in connection with the new Commercial Code, and he asked how all of these as well as the Code itself were to be dealt with in the short space of ten days. Mr. Watanabe Jinkichi supported the measure. He admitted that the new Code was a useful piece of legislation and, speaking from his own knowledge as a merchant, he could say that had it been put into operation two years ago, great benefit would have been felt in respect of Companies and Bankruptcy. But since the House of Representatives had voted for postponement, he also had adopted that view. The House of Representatives consisted of merchants, farmers, manufacturers and so forth. If its opinion was not to be accepted on such a subject, where were they to look for a trustworthy verdict? The House of Peers, on the contrary, consisted for the most part of members to whom commercial affairs were comparatively strange. He thought that for this reason, and also for the sake of preserving good relations between the Houses, the Bill should be passed. Two years was not a long time. If the operation of the Code were postponed to 1893, merchants would have time to make proper preparations. Mr. Hirata Tosuke opposed the Bill. He protested strongly against the theory advanced by the last speaker that the House of Peers should give its consent merely because the Lower House had done so. The Upper House had just as much title to be considered a representative of the nation as the Lower, and if one were to agree merely because the other had done so, the object of a bi-cameral system would be defeated. He then proceeded to combat the notion that the Commercial Code and the Civil Codes must go into operation together. They had an example in the case of Germany, where the Commercial Code had long been in successful operation though the Civil Codes were not yet promulgated. The new Code was needed, and should be put in force at once. If practical experience showed that it required revision, then revise it. He had no sympathy with those who, while opposing the latter course on the ground that laws should not be hastily altered, were nevertheless agitating for the sudden postponement of an important enactment on the very eve of its proclaimed time of operation. As for the contention that the operation of the Code would cause confusion in commercial circles, it was equivalent to saying that unwritten customs of doubtful expediency should be pre-

ferred to written laws compiled in conformity with enlightened principles. Some went so far as to assert that the provisions of such a law would interfere with the individual rights of merchants. The notion was absurd. Merchants had no rights in the absence of written law. Rights were created by law. At present there were no laws to determine what a man was entitled to do and what he must refrain from doing. The new Code would define and establish the rights of merchants. Mr. Kato Hiroyuki supported the Bill. His arguments were chiefly directed against too rapid legislation. He considered that the advances made by Japan during the past twenty years had been very rapid, and that the education of society, to be sound, must be slow. He had been told by M. Boissonade that when the Code Napoleon was promulgated, its provisions were opposed to many French customs, and he frankly admitted that progress involved a certain disregard of old-fashioned usages. But he thought that the conflict between the new Commercial Code and Japanese customs was many times greater than the conflict between French customs and the Code Napoleon had been at the time of the latter's enforcement. He advocated the utmost deliberation in this matter; deliberation such as Germany displayed in respect of her Civil Codes. Mr. Okauchi Shigetoshi opposed the Bill. He ridiculed the notion that the Commercial Code could not be enforced independently of the Civil Codes, and pointed out that the Criminal Code had been enforced independently and had worked excellently. Many companies had been formed and other measures taken by merchants in view of the speedy operation of the Commercial Code, and in conformity with the Ordinances relating to it, and he deprecated any sudden disturbance such as would be caused by postponing the date at this eleventh hour. Mr. Shimogo Dempei spoke in favour of postponement. He argued that Japanese merchants were, for the most part, men of little erudition, governed entirely by customs that had been handed down to them from feudal times. They could not without great confusion conform with the provisions of the new Code. The House rose at 5.50 p.m.

HOUSE OF REPRESENTATIVES.—DECEMBER 22ND, 1890.

THE House of Representatives has been engaged the last few days considering the Poor Law Bill introduced by the Government, a Bill to amend the Copyright Law, introduced by Mr. Suyematsu Kencho, and a Bill for the Abolition of the Peace Preservation Regulations, introduced by Mr. Kato Heishiro. When the House met on the 22nd, an interesting question was brought forward by Mr. Inouye Kakugoro, who, as our readers will probably remember, was formerly editor of a Japanese newspaper in Seoul. He stated that he had received from the Japanese merchants in Korea a complaint which seemed to demand the immediate attention of the House. In 1882, the Government of Japan, according to Mr. Inouye's information, had lent a sum of 170,000 *yen* to Korea, the transaction being conducted through the Specie Bank, the then Director of which, Mr. Koizumi, became the direct creditor of Korea, and Messrs. Bin Yei-yoku and Kin Yokun the debtors of Japan. By way of security for the repayment of this money the Customs dues at Fusan, Gensan, and Jinsen were hypothecated. Subsequently the Korean Government borrowed a sum of 200,000 Taels from China on the same security, whereupon the Chinese Authorities assumed control of the Customs at the three places, and the prior claim of Japan seemed to have been suffered to fall altogether into abeyance. The result of this had proved injurious to the business of Japanese trading in Korea, though the exact nature of the injury was not stated. Mr. Inouye asked the House to support him in preferring a question to the Government, as the matter concerned the national dignity and interest. Further, in the year 1883, Mr. Takezoye, Japanese Representative at the Korean Court, made an agreement with Mr. Bin Yei-yoku, Korean Minister of Foreign Affairs, that a submarine telegraph should be laid from Kiushu via Tsushima to Pusan. This project had not been favoured by the Japanese

Government alone: it had also been warmly urged by Korea, and it involved Japan in large expenditure. In this agreement it was distinctly laid down that during the space of 20 years Korea should not lay any other line of telegraph, sub-marine or otherwise, to communicate with any other foreign country. Nevertheless, in defiance of this agreement the Korean Government, in 1885, laid an overland line of telegraph communicating directly with China, and no efficient measures seemed to have been taken by Japan to obtain redress for this flagrant breach of contract. In the third place, whereas Japan's Treaty with Korea guaranteed to the former the treatment of the most favoured nation she did not receive such treatment in practice, for the whole export of ginseng, one of Korea's most important staples, was by special arrangement placed in Chinese hands, and Japanese merchants were altogether excluded from the traffic. Finally, in July of the present year, some Japanese fishermen engaged in carrying on their trade off the Korean coast, had fallen under suspicion of killing a Korean, had been seized by the Korean Authorities, subjected to torture, and afterwards acquitted as innocent. No steps appeared to have been taken by the Japanese Government to obtain redress for this serious outrage. Concerning the various points, Mr. Inouye urged that steps should be taken to approach the Government. The House, of course, took no immediate action in this matter, but doubtless the point brought forward by Mr. Inouye will be made the subject of questions addressed to the Government, when the prescribed number of members shall have given their consent. The debate on the Government's Poor Law Bill was then continued, and ended in the rejection of the Bill by the House. In accordance with the Orders of the Day, the House ought to have then proceeded to the second reading of the Copyright Bill, but in the absence of the proposer of the Bill it was decided to pass to the next item, namely the abolition of the Peace Preservation Regulations. A motion was introduced and carried to dispense with the second and third readings of this Bill, and to decide it finally on the first reading. The President then called for a division, and the Bill was carried by a large majority. Of this result there never was any doubt, for the abolition of these temporarily necessary but very obnoxious regulations had formed an item in the platform of every political party represented in the House. The second reading of the Copyright Bill was then passed, but the third reading brought up an amendment by Mr. Suyehiro, which caused so much debate that the time for the House's rising came before a decision could be taken.

ECONOMIC PROGRESS.

THE *Kokumin-no-Tomo* reviews the economic progress of the country during the two dozen years since the Restoration. After alluding in general language to the magnitude of the changes that were effected in the economic system of the country at or about the time of the Restoration,—especially the voluntary renunciation of their fields by the feudal barons,—the Tokyo periodical goes on to observe that the position of the peasantry has immensely improved under the present régime. Hard as their lot still is, the farmers and peasants are now paying in the shape of taxes far less than they used to pay under the Shogunate Government, which exacted from them as taxes from 60 to 70 per cent. of the fruit of their toil, to say nothing of contributions laid on them in the form of personal labour. Some years ago, the Osaka Chamber of Commerce, reporting on the causes of the then existing dullness of trade, cited the growth of luxurious habits among the farming class as one of the most potential factors that had been at work to bring about a state of commercial depression. Without pausing to analyse the logic of the Osaka Chamber's reasoning, and without admitting that the term "luxurious" properly describes the habits of the farming population, the *Kokumin* places beyond all doubt the fact that the standard of living has greatly improved among the rustic population.

Then passing on to review more in detail the features of the economic situation, the *Kokumin* first takes up foreign trade. In 1868, the exports amounted in value to only 15,550,000 *yen* and the imports to 10,690,000 *yen*; but in 1889, the corresponding figures were 70,060,000 *yen* and 66,100,000 *yen*. The value of the foreign trade, export and import, per head of the whole population was 1 *yen* 30 *sen* 5 *rin* in 1872, when an accurate census was taken for the first time; but it rose in 1887 to 3 *yen* 44 *sen*, an increase of two-fold and half in a period of seventeen years. As to companies of various descriptions, their total number in 1889 was 2,038, with an aggregate capital of 67,855,468 *yen*; while the total number of banking corporations was in the following year 1,061, with an aggregate capital of 92,446,063 *yen*. These companies and banks had all been created since the commencement of the Meiji era. Among them, 54 are concerned with mining operations, 22 with spinning, 108 with weaving, and 650 with the manufacture of silk. Next, coming to agriculture, we are told that vast improvements have been introduced in the mode of tilling the soil, in the selection of seeds, in reclamation and irrigation, and so forth, the result being a large increase in the produce of the land. No trustworthy statistics being procurable for the years preceding 1878, the *Kokumin-no-Tomo* compares the production of rice in that year with the yield in 1888. In 1878, the total quantity of the rice crop was 25,282,540 *koku*, the produce per *tan* ($\frac{1}{10}$ of an acre) being 1.02 *koku*; in 1888 the corresponding figures were 38,645,583 *koku* and 1.44 *koku*. A similar increase is observable in the produce of barley and wheat; the yield per *tan*, which was 6.9 *sho* in 1878, increasing to 9.4 *sho* in 1888, while the total harvest of the two cereals was 9,411,460 *koku* in 1878, and 15,281,658 *koku* in 1888. The development of sericulture and of tea-growing have also been extraordinary during the Meiji era. In 1878, the quantity of tea produced was 2,761,523 *kamme*, but in 1888 the quantity rose to 7,252,830 *kamme*. The quantities of silk produced in these two years were 362,607 *kamme* and 944,400 *kamme* respectively. Statistics are not obtainable for the first years of the era, but it may be easily imagined, the Tokyo periodical justly observes, how large an increase has taken place in the production of silk and tea since 1868, when one bears in mind that formerly these articles, now the staple exports of the country, were exclusively limited to home consumption. Turning to means of communication, our contemporary remarks that exceedingly satisfactory results have also been obtained in this direction. As a poet says, one had formerly to travel on the Tokaido for fifteen days in sight of Fuji-san; a strange contrast with these days, when, according to returns for the present year, the total length of railway lines already opened, private and official, is 1,179 miles and 60 chains. As to ships, the total number of vessels built after the foreign model was 1,420 in 1888, with an aggregate tonnage of 144,194 tons, whereas the corresponding figures for 1870 were 46 and 17,952 tons respectively. An equally rapid development is observable in the postal service. The number of letters and other matter entrusted to the post—excluding those coming from or going abroad—was 158,265,202 in 1888, the corresponding figures for 1879 being 60,923,999. Though not directly connected with the economic condition of the country, the state of education may, observes the *Kokumin*, be taken as an indication of the productive capacity of the nation. In 1888, the total number of educational institutions of all kinds, both private and Government, was 27,923, while the number of professors and teachers reached 69,032, and the number of boys and girls receiving instruction was 3,050,538. In 1873, the corresponding figures were 12,597, 27,107, and 1,326,190. The number of pupils thus increased by 230 per cent., while the population increased during the same interval by only 19 per cent. The figures thus far quoted, continues the *Kokumin*, show beyond doubt that Japan is constantly becoming more and more

rich. With such an increase of the national wealth, the country cannot but develop additional capacity to defend itself. According to the statistics for the year 1888, the total number of men that could be put in the field in the event of an emergency was 245,311. The Navy consisted of 30 war vessels, with an aggregate tonnage of 48,820 tons, while the number of officers and men manning these ships was 5,681. Such a navy or army, the Tokyo periodical admits, is a mere plaything compared with the gigantic armaments of European Powers. But Japan already possesses enough troops and ships to make her one of the most formidable States in the Orient. The *Kokumin* concludes its article by exhorting its countrymen to be more and more enterprising and courageous, and by quoting the words which M. Thiers addressed to the French people after the disastrous war with Germany.

A NEW FIRST SECRETARY OF H.B.M.'S LEGATION IN TOKYO.

TELEGRAPHIC news received in Tokyo on the 18th instant announced that Mr. Maurice William Guest de Bunsen has been appointed to the post of First Secretary of Her Britannic Majesty's Legation in Tokyo, *vice* the Honble. W.G. Napier, who has apparently been superseded. The Honble. Mr. Napier's departure was somewhat sudden, and though the public understood at the time that circumstances had occurred which rendered his return to Japan improbable, some surprise will doubtless be caused by the intelligence that a successor has been so speedily appointed. Mr. Napier's term of service in Japan had not expired, and in the ordinary course of events he would have been granted leave of absence if his visit to England had been connected with private affairs. The immediate nomination of a First Secretary to take his place would therefore indicate that the Foreign Office has acted in obedience to special considerations. Mr. de Bunsen has been thirteen years in the Diplomatic service. His first post was in Washington (1878), whence he proceeded as Third Secretary to Berne (1881). He became Second Secretary in 1883, while serving at Madrid, whence he was transferred to Paris in 1886. He acted as Chargé d'Affaires on several occasions in Berne and Madrid. We believe that it is his intention to leave London in February, so that his advent in Japan may be looked for in April.

LEADING JAPANESE JOURNALS ON THE POSTPONEMENT OF THE NEW COMMERCIAL CODE.

THE Bill for the postponement of the date of operation of the Commercial Code gave rise to a long and warm debate in the House of Representatives, occupying more than ten hours and extending over two days. The subject being of much practical importance to the commercial community, the debate was conducted with a seriousness and animation, hitherto unknown in the House, and many leading members took part in it.

The *Mainichi Shimbun* in a short note remarks:—"The supporters of the Bill for postponement were mostly of the English school of jurisprudence while the opponents were principally disciples of French law. The former consisted of members of the *Taiseikwai* and the *Shukwaijo* (Kaishinto Members' Club) and members of neutral principles, while the latter included a portion of the Liberals. If we take Mr. Toyoda Bunzaburo (a member of the Osaka Electric Light Company) to represent the opinions of the business men of Osaka, and Mr. Tanaka Gentaro (a farmer of the Prefecture of Kyoto), those of practical men in Kyoto, we may conclude that the Kyoto people favoured and the Osaka folks opposed postponement. As to the debate itself, the supporters of the Bill on the first day were somewhat passive and perceptibly lost ground before the steady and vigorous attacks of their opponents, of whom Mr. Miyagi (a French doctor of law, and lately a member of the Committee preparing the Code) made a

speech especially clear and telling; and if a decision had been come to then the result would have been exceedingly problematical. The supporters of the bill were, therefore, anxious to adjourn the sitting and in these tactics they were well advised. For on the second day, they gained greatly in vigour and completely recovered their ground, the result being the passing of the Bill by a large majority. There can be no doubt that the speech of Mr. Suyematsu Kencho (an M.A. of Cambridge, and lately Chief Commissioner of the Bureau for the Management of Prefectures) contributed greatly to the success of the bill, while the eloquent address of Mr. Takanashi Tetsushiro (one of the leading barristers of Tokyo) in opposition well sustained the spirits of his side. But Mr. Mitsukuri, Vice-Minister of State for Justice, in his anxiety to further the views of those advocating the enforcement of the Code, made a speech which was decidedly damaging to the cause he wished to promote, and in the end the Bill was passed by a majority of 189 against 67.

The *Hochi Shimbun*, writing on the same subject, says that although it cannot be predicted whether the Bill for postponement will pass the House of Peers, yet the general feeling in the Upper House seems to be in its favour; and if this proves to be true, what steps will be taken by the Cabinet? If it disregards the resolutions of the Houses and proceeds with its original intention, it will then become a Cabinet at variance with popular opinion, and if it postpones enforcement according to the voting in the Houses, it must come to the humiliating position of being unable to carry out its own measures. The selection of one of these alternatives devolves on the Cabinet, and the decision causes a great deal of anxiety to Ministers. Different opinions are said to be held by members of the Cabinet. One rumour says that the idea of adopting the views of the Houses has at present a preponderance of support in the Cabinet, but it is also rumoured that Ministers feel that a concession on this occasion would prove a bad precedent. It is thought that the Cabinet would find it always necessary to give in whenever any difference of opinion between the Houses and the Administration occurred, and that as there are already many points in the Budget which threaten to produce a conflict between the Legislature and the Executive, this question of postponing the date of enforcement of the Commercial Code would bring matters to a climax, and consequently the whole affair is of a very grave nature. In any case the Minister of State for Justice is in a difficult position.

The *Kokkai* says:—"If the Bill pass through the Houses and be agreed to by the Cabinet, rumour says that it will produce very serious effects on the operation of the law for the Organization of Law Courts, because the large funds required for enforcing the latter were expected to be defrayed by means of the registry fees to be collected according to the Commercial Code, and it might thus necessitate a change in the steps already commenced in the operation of the law of the Organization of Courts. This of course concerns chiefly the Minister of State for Justice, but the imminent postponement will also, it is said, cause great inconvenience to the Minister of State for Foreign Affairs. Viscount Aoki declared in his speech in the House of Representatives that the operation of the Commercial Code had nothing to do with the question of Treaty Revision, but the accuracy of that statement is to be doubted, and it is very likely that postponement will place him in no easy position. The desire for postponing the date of enforcement of the Commercial Code has now obtained very firm footing in the public mind, and therefore it will be a serious step for the Government to act in opposition, as the friction produced between the Cabinet and the people would be very great; but on the other hand, postponement will put the two Ministers above mentioned in an exceedingly difficult situation. No doubt when this ques-

tion comes to be decided, it will cause a good deal of agitation in the Cabinet. Indeed, although the question is purely one of postponement, we have here a very grave problem to be settled between the Government and the nation at large.

The same paper mentions, with reference to the question above alluded to, that the Minister of State for Justice has presented to the Minister President a written opinion, copies of which the latter distributed under private seal among the Ministers of State the same evening, and a Cabinet Conference was to take place the following day (the 19th) at 9 o'clock. The Minister of State for Justice is also said to be using every means of convincing the *Kwasoku* Section of the House of Peers of the necessity of carrying out the Commercial Code without delay, and by distributing pamphlets and sending out subordinate officials, is busily engaged in trying to gain support for his views.

The *Chugwai Shogyo Shimpō* (Commercial News) remarks, under the heading of "Feeling in commercial circles with reference to the postponement of the operation of the Commercial Code," that "great excitement has been aroused over the promulgation of the Commercial Code and its enforcement, and the question of enforcing or postponing its operation has become a subject of warm discussion among practical men of business. Its promulgation filled the principal *Tonya* (large or wholesale merchants) with apprehension, causing them to reduce their transactions and to act cautiously, while watching the general state of affairs. In the same way, the different companies, for fear of infringing the provisions of the Commercial Code, have become very guarded in their actions. This state of affairs has considerably increased the depression already felt, and contributed to bring about the present lamentable condition of commerce. If the Bill for postponement should pass the House of Peers and receive the approval of the Government, it will restore activity to a great extent; stock lists will show an improvement, and we may expect to salute the coming spring with gladdened hearts."

THE COMMERCIAL CODE AND THE BUDGET.

AFTER a long and animated debate, extending over two days, the House of Peers on Monday passed, by a vote of 140 to 60, the Bill sent up from the Lower House for the postponement of the operation of the new Commercial Code until January 1st, 1893. It was at one time thought that the division would be very close, but this anticipation scarcely survived the action taken by the House on Saturday morning, when the members decided to entrust to the President the selection of a Committee to examine the Bill, and directed the Committee to prepare its report in a few hours. There could be little doubt after this that the Committee's report was to be based, not on the merits of the Code, but on the sentiments of the House towards it, and that those sentiments were not favourable; for though the Peers might have been willing to incur a charge of precipitancy so long as their verdict coincided with that of the Lower House, they would certainly have proceeded with the utmost deliberation if they contemplated the rejection of a Bill sent up by the Commons. The exceedingly limited time allowed to the Committee consequently furnished a clear indication as to how the voting would go, though probably few persons anticipated such an overwhelming majority as 80 in a House of 200. It is difficult to see how the Government can avoid accepting the verdict of the two Houses when it comes to them in a form so unmistakable. The country is obviously against the speedy operation of the new Code, and to enforce it under such circumstances would scarcely be wise. It does not greatly matter what the real motive of the Code's opponents may be. For our own part, we entertain very little doubt that in both Houses the vote was largely influenced by the popular belief that the operation of the Code was hastened in

the interests of Treaty Revision, and that its foreign elements were too prominent. Be this as it may, however, the people's representatives have pronounced emphatically in favour of postponement, and the Government cannot easily refuse to give practical effect to their decision. At the same time, it must be admitted that, in one respect, the Government's position is not pleasant. There remains an interval of only eight days until the date fixed by Imperial Ordinance for the Code's going into force, and doubtless many merchants have already made arrangements to take advantage of its provisions. Moreover, various laws have been promulgated with reference to the operation of the Code, and as the Government Departments close for the New Year on the 26th instant, a process of wholesale revocation will have to be accomplished on the 24th, if the verdict of the Houses is to be respected. The Government's retreat from its position cannot be leisurely and dignified under such circumstances: it will partake of the nature of a scramble.

There is, however, one solid grain of comfort for officials in the situation, namely, that by exacting a very substantial concession from the Government in the matter of the Commercial Code, the House of Representatives will find its hands materially weakened in respect of the Budget. There appears to be great controversy over the Budget. A Committee of 55 members, as our readers will doubtless remember, was appointed, some time ago, in the Lower House to consider and report upon the estimates, and it is said that this Committee very soon became separated into two Sections, called respectively the Moderates (*Onka-ha*) and the Extremists (*Kageki-ha*). The latter comprised the whole of the *Kaishin-to* members of Committee, and a portion of the *Rikken Jiyu-to* members. The former contained the greater part of the *Rikken Jiyu-to* members and all the representatives of the *Taisei-Kai*. The Extremists were for reducing the national expenditure by no less a sum than ten million *yen* at one coup, and as this was considerably more than one-half of the total figures in the Budget falling within the lawful revision of the Diet, the proposal certainly did not err on the side of modesty. The Moderates, on the other hand, maintained that three million *yen* represented the maximum possible reduction. After some discussion a compromise was suggested, and it seemed possible that both sides would unite in recommending an economy of five million *yen*, when suddenly the Extremists—we quote from a report of the Tokyo News Agency—developed new and unexpected strength, and the ten million reduction became once more the order of the day. It is said, indeed, that the Committee's report has been actually drawn up and printed in that sense, nearly two-thirds of the fifty-five members being agreed, but that the minority remain firm and make their voices heard very emphatically. Now if this account of what is going on be correct, it is pretty plain that the discussion does not proceed on the basis of examining item by item and determining the expediency or inexpediency of making special reductions, but that the Committee is resolved, under any and all circumstances, to recommend reduction, and that the only question relates to amount. Of course there is scarcely a faint possibility of the Cabinet's agreeing to a reduction of ten million *yen*, or of even the half of that amount. Here the Government must make a stand, and it will be enabled to do so with a much better grace if it has previously yielded to the wishes of the Diet in the matter of the Commercial Code. No news could be better than to learn that the Diet had discovered a sound and practicable method of reducing the national expenditure, but we cannot conceive any method of effecting a substantial economy except by largely reducing the numbers and emoluments of officials, and both of these matters lie outside the Diet's sphere of interference.

VISCOUNT AOKI AND HIS CRITICS.

VISCOUNT AOKI is running the usual gauntlet of misrepresentation and unjust criticism. One

of the remarkable features of the speech delivered by him before the House of Representatives was his frank admission of the obligation incumbent on Japan not to deal lightly or hastily with the claims of Foreign Powers, or to take any step ignoring the consideration that her own claims have hitherto received at their hands. Here is his own language:—"Privileges when they are once granted by treaty become, as it were, the rights of those to whom they are granted, and cannot be revoked at will." And here is the criticism which these words have provoked:—"To talk about rights and to inferentially treat Foreign demands as mere trifles is playing to the gallery, and may make a Minister popular at home." A critique of the Minister's necktie, or tonsure, would have been equally relevant and far more just. The same lucid writer attacks the Minister on the ground that the latter denied the necessity of Japan's making any internal reforms before advancing the right to be relieved of her present disabilities. It is scarcely necessary to say that Viscount Aoki did nothing of the sort. What he did was simply to draw a clear distinction between the existence of an abstract right and the necessity of making preparations to enforce it. This part of his argument was evidently addressed to the small section of malcontents who last year claimed that the country must not be opened because preparations to receive foreigners were not in a sufficiently forward state. Viscount Aoki met this contention by pointing out that if it was true in 1889, it must have been still truer at all the preceding periods when negotiations to accomplish revision were undertaken. To charge Viscount Aoki of all men in Japan with being insensible to the necessity of internal reforms, is silly in the extreme. Above all is this silliness made apparent by the light of the latter part of his speech where, after citing the various steps of Japanese progress, and pointing to them as practical guarantees which Foreign Governments ought to accept, he makes use of the following words:—"The guarantees furnished by Japan's progress, and the increased knowledge which the world now possesses of Japan's condition, warrant us in hoping that the position of this Empire will induce Foreign Powers to treat our proposals with liberality. I am disposed to think, indeed, that the failures made in Treaty Revision have been so many steps in the history of our country's progress." Yet in the face of these distinct admissions, he is charged with having denied that "domestic reform and Treaty Revision go hand in hand." These delirious criticisms are probably not due to any deliberately dishonest reading of the Minister's speech, but are attributable to the fact that some of the men in this Settlement who undertake to discuss questions of State and international policy have no conception of the value of language, and are as reckless in their own use of words as they are careless in reading the words of others.

To a different category belong the criticisms of another journal which possesses and regularly exercises the convenient faculty of always making mistakes on its own side of the account. This journal charges the Minister with "statements which to say the least are incorrect." The first of these statements refers to the period originally contemplated by the operation of the Treaty of 1858. Viscount Aoki said that the period was expressly limited to 1872, and this assertion of his is declared not to have "the slightest warrant." If the point in question were not distinctly provided for in the body of the Treaties themselves, if any room existed whatsoever for doubt, one could pardon the extreme effrontery of a petty journalist who ventured peremptorily to advance his own opinion in direct opposition to that of the Minister of Foreign Affairs, and of a number of eminent juriconsults whose verdicts have been published. But there is not the slightest room for doubt. The Treaty with Great Britain, as quoted by the newspaper critic himself, reads thus:—"It is agreed that either of the high contracting parties to this Treaty on giving one year's previous notice to

the other, may demand a revision thereof on and after the first of July, 1872, with a view to the insertion therein of such amendments as experience shall prove to be desirable." If this does not mean that the time of the Treaty was expressly limited to 1872, we should like to know what it does mean. Take a parallel case in every day life. A man enters into an agreement to discharge certain services up to a certain date, at a certain rate of remuneration, with a proviso that at that date he shall be entitled to demand a change in the rate of remuneration. Could such an agreement possibly be construed to mean that the man must continue to give his services at the original rate after the expiration of the original period, and after his demand for a change of rate had been rejected? It does not follow that the other side is bound to agree to the proposed amendment of terms, but it does certainly follow that the man is not obliged to continue giving his services without some change of terms. This is precisely analogous to the case of the Treaty. That document, as quoted above, became subject to revision on and after the first of July, 1872, on the demand of either of the High Contracting Parties. Japan has over and over again demanded a Revision, and, failing to obtain it, she is not bound by any principle of justice or common sense to continue the Treaty on its old terms. We should like to see how such a contention would be received if it were advanced by Japan. We should like to see how she would be treated if she maintained that because a treaty becomes revisable at a fixed date, and because revisions cannot be effected in a treaty that does not exist, therefore the perpetual operation of the treaty without revision is implied. Assuredly she would be charged with flagrant bad faith and quibbling of the pettiest character. Any writer of the commonest honesty should be ashamed to advance such a palpable sophistry.

VISCOUNT TORIO.

VISCOUNT TORIO has taken the singular step of resigning his membership of the House of Peers because the President ruled him out of order, and did not allow him to continue his speech during the recent debate on the Commercial Code. The point about which Viscount Torio desired to address the House was this:—He believed the proposed postponement of the Code's operation to be altogether expedient, but inasmuch as the enactment has already been promulgated, and the date of its going into force fixed under the Imperial Sign-Manual, any attempt on the part of the Diet to effect an alteration would have a serious significance, and must place the Diet in an embarrassing situation. The Viscount therefore wished to ask the Committee on the Bill whether in postponing the operation of the Code, the intention really was to put it into operation from January, 1893, or whether postponement was recommended merely for the sake of revision. The President ruled that this had no connection with the subject before the House, namely, whether or no the date of the Code's operation should be deferred, and Viscount Torio was obliged to resume his seat. At a subsequent period he endeavoured to bring up the same question again, but was again ruled out of order, and in consequence of this action of the President's he has now resigned his seat. This is the first important incident that has to be placed on record to the discredit of the Japanese Diet. Hitherto the proceedings have been marked by a strong sense of decorum, and the debates have indicated highly praiseworthy acumen and aptitude. But the resignation of Viscount Torio on such a plea betrays childish petulance and a signal failure to appreciate his duty towards the Peers of his Order, who elected him, as well as his responsibilities as a member of Parliament. The very first principle of order in constitutional assemblies is that the decisions of the President or Speaker must be implicitly obeyed. As a soldier Viscount Torio should have been able to set an example of discipline; as a member of the Upper House he should have refrained carefully from offering a mischievous and unruly prece-

dent; and as a political leader he ought to have understood that his party expected, and his principles demanded, conduct very different from a hasty abandonment of his parliamentary functions in a moment of peevish chagrin and mortified pride. In our opinion the President's ruling was perfectly correct, but even had it been erroneous, the course adopted by Viscount Torio shows a signal want of dignity, self-restraint, and sense of proportion. The place of a member of the House is not to be sacrificed on such a petty plea as that assigned for the Viscount's resignation. Action so ill-balanced and precipitate would mar the prospects of any political leader in Europe, nor will it be forgiven to Viscount Torio in Japan, we imagine, high as is the esteem in which his pure character and lofty patriotism are generally held.

IMAGINARY CABINETS.

A VERNACULAR newspaper has published two imaginary Cabinets in lieu of the present Administration. The first is supposed to be the Cabinet which would be formed if the *Taisei* (Independents) came into power. It is as follows:—

Minister President of State	Count Ito.
Chief Secretary	Mr. Ito Miyoji.
Minister of State for Foreign Affairs	Viscount Yenomoto.
Vice-Minister	Mr. Suyematsu Ken-cho.
Minister of State for Home Affairs	Count Saigo.
Vice-Minister	Mr. Masuda Shigeyuki.
Minister of State for Finance	Count Matsukata.
Vice-Minister	Mr. Watanabe Kunikida.
Minister of State for War	Major-General Kawakami.
Vice-Minister	Lieut.-General Ozawa.
Minister of State for the Navy	Viscount Kabayama.
Vice-Minister	Admiral S. Ito.
Minister of State for Justice	Viscount Tanaka Fujimaro.
Vice-Minister	Mr. Miyoshi.
Minister of State for Education	Mr. Kuki Riyochi.
Vice-Minister	Mr. Hamao Arata.
Minister of State for Agriculture and Commerce	Viscount Yoshida Ki-yowari.
Vice-Minister	Mr. Ishida Yeikichi.
Minister of State for Communications	Count Goto.
Vice-Minister	Mr. Furusawa Shigeru.
Chief of the Metropolitan Police Bureau	Mr. Daito Gitsutsu.

The following is given as the Cabinet of the Radicals:—

Minister President of State	Count Okuma.
Chief Secretary	Mr. Hatoyama.
Minister of State for Foreign Affairs	Count Okuma.
Vice-Minister	Mr. Yano Fumio.
Minister of State for Home Affairs	Count Saigo.
Vice-Minister	Mr. Matsuda Masahisa.
Minister of State for Finance	Mr. Kono Binken.
Vice-Minister	Mr. Kawashima Jun.
Minister of State for War	General Viscount Takashima.
Vice-Minister	General Ozawa.
Minister of State for the Navy	Viscount Kabayama.
Vice-Minister	Admiral S. Ito.
Minister of State for Justice	Count Itagaki.
Vice-Minister	Mr. Hoshi Toru.
Minister of State for Education	Mr. Nakajima Nobuyuki.
Vice-Minister	Mr. Shimada Saburo.
Minister of State for Agriculture and Commerce	Mr. Mutsu.
Vice-Minister	Mr. Hayashi Yuzo.
Minister of State for Communications	Mr. Mayejima.
Vice-Minister	Mr. Kono Hironaka.
Chief of the Metropolitan Police Bureau	Mr. Oi Kentaro.

It will be seen that the names of Count Saigo and Viscount Kabayama appear among the Ministers in both lists, and the names of Lieut. General Ozawa and Admiral S. Ito among the Vice-Ministers.

LADIES IN THE DIET.

THE embargo originally placed on the presence of ladies in the strangers' gallery of the Diet

continued in force for only a very short time. We are not aware by what, if any, distinct measure it was declared a dead letter, but it certainly ceased, almost at once, to be enforced, and during the past ten days several ladies have been present at debates. Japan is in the difficult position of having to reduce to written rule many points of procedure which elsewhere have been gradually established by custom, and are not to be found in the letter of any regulation. It is, of course, very well for a parliament to work out its own methods of procedure little by little, provided that its career passes through the stages common to most things human, namely, childhood, youth, and maturity. But where a parliament has to spring into full-grown existence, as is the case in Japan, and when its conduct from the very outset is judged by the standards of old and long experienced Constitutional assemblies in the West, the more rules it has to guide it the better. Accordingly, the Rules of Procedure of the Japanese Diet are sufficiently numerous to fill a tolerably bulky volume, and sufficiently minute to furnish directions in almost any conjuncture. Among these rules provisions relating to the admission of strangers to hear the debates are very clearly laid down. The course to be taken by members of the Foreign Corps Diplomatique; the course to be taken by Japanese officials; the course to be taken by journalists, and the course to be taken by the general public, are all indicated. As at Westminster, so in Uchi-sawaicho, access to the gallery in the case of everyday folks can only be obtained through a member. Once in the gallery, however, a stranger cannot be turned out so long as he observes the rules—i.e. refrains from tokens of applause or dissent; does not disturb the House, and so forth—and so long as the House does not decide to go into secret session. In this respect the Japanese practice differs from the English, for at Westminster any member can have the Strangers' Gallery cleared merely by calling the Speaker's attention to the fact that there are strangers present. We may mention here a curious fact in connection with Westminster customs, namely, that the only strangers whose removal cannot be achieved at any moment are the ladies. In point of fact a lady, having gained admission to the House, could sit out any debate, even after an order to clear the House had been given. This anomaly is the result of an architectural difficulty. When the new parliamentary buildings were completed, it was found that no space was available for lady visitors, and provision for their accommodation was accordingly made in a room which does not form part of the House itself. A Speaker's order to clear the House does not extend, consequently, to the Ladies' Gallery, and here as everywhere else, the fair sex is free to set law and order at defiance.

AN ITALIAN VIEW OF TREATY REVISION.

La Riforma, the organ of Premier Crispi, contained on the 29th Oct. last an article under the heading of "Treaty Revision in Japan," of which the following is a translation:—"Recent news received from Yokohama furnishes us with details of the agitation promoted in that city, against the eventual abolition of consular jurisdiction in Japan, in regard to which we have already had telegraphic communication. The promoters of the movement had arranged at a meeting held on the 11th of last month the appointment of a working committee of seven members, who were instructed to collect the necessary funds and to enter into communication with the principal Chambers of Commerce in countries having the most important business intercourse with Japan, in order to protest, even by means of the press if necessary, against the action of the British Government, which is supporting treaty revision. Among the European agitators, residing at Yokohama and Tokyo, there are, however, many who protest more for the sake of their own personal and commercial interest, than on account of national spirit, or of the legal benefits of maintaining extra-territorial jurisdiction, which up to now has ruled in those cities. The most important points which the British Government seems preferably inclined

to insist upon, should be: the revision of the Customs tariff of Japan, a radical reformation of the system of passports, the securing of the right for British subjects to buy and possess real estate within the territory of the Empire of the Rising Sun. In exchange for such concessions, it would on its side grant little by little and gradually, the abolition of the capitulations, of course after having ascertained by experience that the local judiciary will be fit to try and judge even the disputes and law-suits of Europeans. But the anti-revisionists do not want even to hear talk of any concession or of any relinquishment at any time. They clearly understand that English Ministers, by showing themselves disposed to surrender the principle of extra-territorial rights, for the attainment of the above mentioned privileges, have principally in view to open the field in Japan for British capital. It is for this reason that those now on the spot agitate so much, fearing the competition of new comers, and because they foresee that by passing from their own to the local jurisdiction they would no more be exempted, as they are now, from the direct and indirect taxes to which the native population is subjected."

THE MINISTER OF STATE FOR JUSTICE AND THE COMMERCIAL CODE.

THERE appears to be very little doubt that the Minister of State for Justice has tendered his resignation in consequence of the decision of both Houses of the Diet as to the postponement of the Commercial Code's operation. By more than one leading Japanese paper the fact is mentioned, with details of the Government's action in the matter. The *Hochi Shimbun* says that four hours after the result of the voting in the Upper House had been announced, namely, at 10 o'clock p.m. on the 22nd instant, Count Yamada sent in his resignation through the Minister of the Imperial Household. The Emperor, much concerned, summoned the President of the Privy Council to the Palace on the 23rd, and entrusted him with the duty of carrying back the resignation and conveying to Count Yamada the Imperial wishes that he should remain at his post. The same gracious intimation was made to the Minister through Viscount Hijikata. The members of the Cabinet also repaired to Count Yamada's official residence, and urged him to reconsider his decision. It is not yet known how the affair will end. Count Yamada is reported to be very determined in his purpose of resigning, and we cannot wonder that such is the case, for the Bill sent up by the two Houses amounts to something very like a vote of censure on the Judicial Department. Count Yamada is a statesman of ability and high integrity. His loss could not fail to be felt by the Cabinet. It is reported that in the event of his resolve to retire remaining unshaken, the portfolio of Justice will probably be given to Mr. Inouye Ki, now Chief of the Legislative Bureau, and that Mr. Inouye's present post will be filled by Mr. Ozaki Saburo, but this forecast is purely conjectural.

Since writing the above we have received an extra of the *Official Gazette*, published yesterday evening, announcing that His Majesty the Emperor has been pleased to allow Count Yamada to retire temporarily on account of ill-health, and that pending his recovery the duties of Minister of Justice will be discharged by Count Oki, President of the Privy Council.

THE "NAMOA" PIRACY.

At the Police Court, Hongkong, before the Hon. H. E. Wodehouse, Li A Loi, 41, tailor; Chan Choi Yen, 36, smuggler; Chan Choa Leung, 32, no occupation; and Leung A Shin, 40, boatman, were charged, with others not in custody, with piratically, feloniously, wilfully, and maliciously killing and slaying Captain T. G. Pocock, master of the British steamer *Namoa*; C. M. Petersen, a passenger; and a Malay quartermaster; and also with feloniously stealing money and jewellery and clothing, valued at \$55,000, the property of the passengers and crew of the British steamer *Namoa*, on the

10th inst., on board the said steamer then on the high seas. Inspector Stanton prosecuted. No evidence was taken, and on the application of Inspector Stanton, the accused were remanded till Tuesday, the 23rd inst.

THE BIRTH OF PEACE. CHRISTMAS, 1890.

It was the silent midnight,
And from the sky afar
A stillness fell o'er hill and dell,
From planet and from star;
And in the depths of heaven,
Amid its clouds of fleece,
The moon rode fair through the listening air,
And the word that it spoke was "Peace!"

The fir-clad mountains slumbered,
The fair, broad plains were still,
And ocean's breast was hushed in rest,
As by some mighty will;
And man and beast were sleeping,
In city and in field,
And song of bird no more was heard,
Mid woodland boughs concealed.

Ah, well may earth be silent,
And well may nature stand
With bated breath, as the hush of death
Were spread o'er sea and land;
For to-night the old is dying,
And to-night shall the new be born;
And the great world waits, at the century's gates,
For the rise of a brighter morn.

There's a glow in the eastern heavens,
And a new-born star is hung,
Like a beacon light, in the nations' sight,
The time-worn oaks among;
And a sudden thrill, awaiting,
Through earth's vast frame has run,
For the old is dead, and the false has fled,
And the true is now begun.

The mariner, far sailing
Alone on the moonlit seas,
Hears on the gale the dying wail
Of the fair, frail gods of Greece;
But the happy spheres are singing
A new, glad strain to earth,
As once they sung when the world was young,
And the song is a song of birth.

Sing on, bright orbs, forever,
To listening sea and shore,
For that star so white, on the brow of night,
Shall pale from the skies no more;
And o'er the great world breaking,
All men the light shall see,
And joy be born in the hearts that mourn,
Through the Christ that is to be.

WILLIAM SHIELDS LISCOMB.
Tokyo, Christmas Eve, 1890.

CENTRAL MISSION TABERNACLE.

WITH reference to our leading article of yesterday, we have been requested to publish the following list of subscriptions to the Central Tabernacle fund:—

Paid before the Fire.	Paid after the Fire.	
R. Hosking, Esq., Tokyo.....	Miss Lund, Tokyo.....	15.00
Rev. E. R. Miller, Morioka.....	Mrs. Van Patten, Yokohama.....	10.00
Rev. C. J. D. Moore, Tokyo.....	Mrs. Fenollosa, Tokyo.....	10.00
Rev. F. A. Cassidy, Shizuoka.....	His Ex. Hugh Fraser, Tokyo.....	25.00
E. B. Watson, Esq., Yokohama.....	J. T. Swift, Esq., Tokyo.....	25.00
Capt. F. Brinkley, Tokyo.....	M. R. Tuttle, Esq., Tokyo.....	50.00
Mrs. Eby.....	Rev. W. Andrews, Hakodate.....	10.00
Rev. A. Hardie, Tokyo.....	Professor Chamberlain, Tokyo.....	5.00
Rev. C. J. Cocking, Tokyo.....	The Misses Prince.....	20.00
Rev. Dr. Cochran, Tokyo.....	Rev. C. T. Cocking.....	40.00
His Ex. Gov. Hibi, Tokyo.....	Dr. Bradbury, Saga.....	10.00
F. S. James, Esq., Yokohama.....	Dr. and Mrs. Wainwright, Oita.....	10.00
Dr. Whitney, Tokyo.....	Rev. J. C. C. Newton, Kobe.....	6.00
Messrs. Wilkin and Robison, Yokohama.....	Rev. Dr. W. Lambuth, Kobe.....	5.00
A. W. Curtis, Esq., Yokohama.....	Rev. W. E. Towson, Kobe.....	6.00
Miss Lund, Tokyo.....	Miss Mary Beis, Kobe.....	5.00

Professor J. M. Dixon, Tokyo.....	Rev. T. B. W. Demara, Kobe.....	5.00
Professor C. C. George, Tokyo.....	Rev. Mr. Wilson, Kobe.....	5.00
Rev. J. C. C. Newton, Kobe.....	Rev. Dr. and Mrs. W. Lambuth, Kobe.....	10.00
Lieut. Wedhouse.....	Miss Gaines, Kobe.....	5.00
Lieut.	Friend from China.....	5.00
The Band.....	Mrs. Waters.....	1.00
M. R. Tuttle, Esq., Tokyo.....	The Band.....	500.00
	Dr. G. C. Knott.....	10.00
		\$800.00
		\$5,834.80

Unpaid subscriptions are not shown in the list.

CHRISTMAS AT THE BRITISH LEGATION IN TOKYO.

THE British Legation in Tokyo was on Thursday thrown open from cellar to garret for the celebration of Christmas. Tokyo had never before witnessed such a fête. The whole of the foreign community of the capital and a majority of the leading Japanese residents were there with their children, the little ones alone numbering nearly two hundred. Yokohama was not largely re-

presented, people naturally shrinking from the long railway journey in the bitter cold, and above all from the consequent necessity of spending the whole of Christmas evening away from their own homes. By half-past four in the afternoon the salons on the ground floor and the spacious hall were the scenes of dancing and merry games of all kinds, and at six o'clock a Christmas tree of colossal proportions crowned the delight of the guests. The gifts without exception were handsome and well selected, and so thoroughly had the arrangements been thought out that every one of the great concourse of children received a valuable present duly labelled with the recipient's name, and the ladies were scarcely less fortunate. The little ones were then regaled at a veritable Christmas feast, and after their return home at 7 o'clock the grown up guests sat down to a dinner laid for a hundred and fifty persons. It certainly was a most happy and hospitable thought to assemble the whole family of British residents under one roof at this glad season, and the association of their children with those of the Japanese in Christmas sports brought the two nationalities so close together that differences of race seemed to have disappeared altogether.

GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 20th instant, as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per yen 100)	Silver Yen.	Pound Sterling (Per £1)
15th.....	117.500	A.M. P.M.	5.7831
16th.....	117.700	A.M. P.M.	5.7831 5.7485
17th.....	116.800	A.M. P.M.	5.6140
18th.....	114.500	A.M. P.M.	5.6140
19th.....	114.500	A.M. P.M.	5.6470
20th.....	114.800	A.M. P.M.	5.6804
Averages.....	115.967		5.6841

The above averages show for gold coin a decrease in value of yen 3.083 per cent., and for the pound sterling a decrease in value of yen 0.1938 as compared with the previous week.

THE BUDGET.

THE period of 15 days originally fixed for the examination of the Budget by the Committee of the House of Representatives having proved insufficient, an extension of one week had to be granted. We say had to be granted, because it does not seem probable that the Government would ever refuse to extend the fixed period if the Committee of the House declared such a course essential. It is natural that the Committee should find exceptional difficulties in making a report on the first Budget ever submitted to a Japanese Parliament. The principles upon which the Budget is compiled have to be considered, and so also has the interpretation of such portions of the Constitution as bear upon this subject. Moreover, the Diet is called upon to furnish a precedent for the guidance of all future Houses in dealing with the important subject of national finance. There are therefore ample reasons for delay apart from the fact that the discussion is said to be greatly complicated by the obstinate radicalism of the *Kaishin-to* Representatives in the Committee, who insist upon reductions that are obviously impossible. The representatives of the *Rikken Yui-to* are no less bound to their constituents than the representatives of the *Kaishin-to* to effect economies in the public expenditure; but whereas the former limit their ideas within practical bounds, speaking of a reduction of only three or four million yen at most, the latter seem determined to push the matter to an extremity by recommending a reduction of ten millions, which is obviously out of all reason. The *Kaishin-to* having always been conspicuous among political parties for moderation and practical common-sense, and its illustrious leader being at least as familiar as any man in Japan with the administration's financial require-

ments, the public is much perplexed to account for the extreme attitude taken by the party in the Diet. The most generally received explanation is that the *Kaishin-to* aims not at defeating the Government on the question of the Budget, but at bringing about a dissolution of Parliament. The forces which the *Kaishin-to* musters in the present House of Representatives are very small in proportion to the real strength of the party, and another election could scarcely fail to largely increase its Parliamentary following. In these facts many people find a sufficient explanation of what is now going on in the House. But we cannot ourselves accept this view. The *Kaishin-to* might indeed gain an increased following at the polls, in the event of an appeal to the country, but it would lose incomparably more in public esteem if, for mere party purposes, it brought about a serious crisis in the history of the first Diet, a crisis which could not fail to cast doubts on Japan's capacity to be governed by Parliamentary institutions.

LOSS OF THE P. AND O. STEAMER "NEPAUL."

TELEGRAPHIC information was received in Hongkong yesterday, says the *Daily Press* of the 15th inst., to the effect that the P. & O. steamer *Nepaul*, homeward bound from Calcutta, had been lost close to Plymouth. The *Nepaul*, which was one of the other older vessels, had a registered tonnage of 3,594 tons. Most of the passengers by the mail steamer *Clyde*, which arrived at Hongkong on the 27th October, were passengers as far as Colombo by the *Nepaul*. They all spoke highly of her sea going qualities, and were particularly well pleased with the care and attention shown to them by the officers and crew. They will all the more regret to hear of her loss.

COUNT YAMADA.

AN extra of the *Nichi Nichi Shimbun*, just received, states that, according to report, Count Yamada's resignation has not been accepted by the Emperor, but that he has been permitted to recruit his health in the capacity of Minister of Justice. The extra then makes the curious addition that Count Oki, President of the Privy Council, has been ordered to combine in himself temporarily the office of Minister of Justice.

A NEW ORGAN OF THE "RIKKEN-JIYU-TO."

THE *Koko* announces that from New Year's day it will become an organ of the *Rikken-Jiyu-to*, and that its editorial department will be under the direction of Messrs. Nakaye Tokusumi, Oye Taku, Hoshi Toru, Oi Kentaro, Kono Hironaka and Takahashi Kiichi, a formidable phalanx of noted politicians. The *Koko* was always a Radical journal. Its politics undergo no change by the alteration in its editorial staff.

We very much regret to receive the following intelligence from the P. & O. Agent at this port:—"I am advised by the Company's Agent at Hongkong that there is no prospect of saving the *Hongkong*, ashore in the Red Sea, and also that the *Nepaul* is a total wreck near Plymouth."

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The principal events of the week have been a serious dissension among the members of the Committee on the Budget, the final and overwhelming success of the Bill for the postponement of the date of operation of the Commercial Code, the resignation of the Minister of Justice, and the formal organization of the much talked of National Liberal party. At the moment of sitting down to prepare this summary, the House of Peers is considering the Bill for the abolition of Law No. 84 (the object of which law is to invest the Crown and the Executive with the power of issuing Ordinances containing punitive provisions within certain limits). The *Hochi Shimbun* reports that the Government is resolved to appeal to the country, if the Diet passes the above mentioned Bill. Before we finish the present summary we may perhaps be able to allude to

the results of the debates on this Bill and also the opinions of the Tokyo papers on the question.

On the 20th instant, Mr. Oye Taku, chairman of the Committee on the Budget, took the members of the Lower House by surprise by informing the House that the Committee had not been able to prepare any report on the Budget within the stipulated period. The repeated demands of the House to know something of what the Committee had been doing failed to elicit one word of reply from the Chairman, who stated only that he had nothing to report. Meanwhile, Mr. Fujita Mokichi and thirteen others notified to the President their intention of resigning their membership of the Committee. After warm debates on the propriety of the extraordinary conduct of the Committee, the conciliatory proposal of Mr. Kusumoto and others prevailed, and the House resolved that a week's time should be granted the Committee to make up the report, the President at the same time declaring, amid the cheers of the House, that Mr. Fujita and others' resignation could not be approved. The reports thus far published by the Tokyo papers as to the cause of the failure of the Committee to complete its report on the Budget, are very various. The *Kaishin-to* organs try to lay the blame on the shoulders of Mr. Oye and other *Jiyu-to* members of the Committee, while the Radical papers turn the tables on Mr. Fujita, Mr. Ozaki, and the other *Kaishin-to* members. It appears that when the Committee had made some progress in the work of formulating reductions on the estimated expenditures, some of the members, Mr. Oye, Mr. Takenouchi, and others, showed themselves unwilling to follow Mr. Fujita and others in the changes which the latter proposed to make in the existing organization of the various branches of the administration, on the ground that such proposals, when tacked to the Budget, would be nothing less than an encroachment upon the constitutional prerogative of the Emperor. It is very extraordinary that Mr. Oye and those who sympathized with him did not take an early opportunity to settle the point, and set the committee's investigations in the right direction. But as it is, they suffered the Committee to proceed on the basis of the radical plan of Mr. Fujita and others. Meanwhile, the date appointed for making a report to the House approached, and at the last moment Mr. Oye and others openly objected to the whole scheme of reduction elaborated by the Committee; and strange to say, his faction had by this time increased so much in numbers that only 19 out of 63 members of the Committee persisted in adhering to the original plan. The Committee now found itself in an embarrassing situation; it had to entirely remodel its report but it had no time to do so. The result was, as already stated, Mr. Oye's strange statement that the Committee had nothing to report. The minority, consisting mostly of the *Kaishin-to* politicians and a small section of the *Jiyu-to*, at first intended to make an independent report to the House, but they at last decided to resign their positions on the Committee. These persons have, however, as already stated, acquiesced in the verdict of the President—that they continue members of the Committee.

The *Kokkai*, writing on the subject, blames the conduct of the *Kaishin-to* members of the Committee, because they, in the opinion of our contemporary, wanted to promote the interest of their party at the expense of that of the country. Why did the members of the *Kaishin-to*, who had hitherto been considered a sober and moderate set of men, propose such a daring and extreme course of action in regard to the Budget? The *Kokkai* answers, because they wanted to cause such a collision between the Diet and the Government as might lead to the dissolution of the former, in which event they hoped that they might be able to retrieve their signal failure at the last general election. Are they likely to succeed in their crafty design to commit the Diet to a fatal course of policy? Our contemporary regrets that the only result of their tactics may

be not the dissolution of the Diet, as they hope, but the carrying out of the Budget of the previous year on the part of the Government.

The *Choya Shimbun* enters a similar protest against the conduct of the members of the *Kaishin-to*. "The members of that party," remarks our contemporary, "having experienced a series of failures in recent years, and being but scantily represented in the Diet, now lack the sense of responsibility attaching to the leaders of current politics. Being, however, an extremely cohesive party—in fact so cohesive that their movements are regarded to be cunning rather than sagacious—they thought that, if they combined with the extreme section of the Constitutional Liberals, they would be able to win over to their side not only the Committee on the Budget but the House of Representatives, and on the strength of this belief they surprised the public by proposing a reduction of the public expenses by as much as 10 million yen." Our contemporary seems, therefore, to think that, but for the selfish tactics of the *Kaishin-to*, the Committee would have been able to complete a report within the stipulated period of fifteen days. The *Choya* then goes on to dwell on the paramount importance of speedily completing the investigations on the Budget, and reminds the Committee of the tedious process through which the Budget must pass after leaving its hands. A number of days will be spent by the House in debating on the results of the investigations of the Committee, and a further number of days will be required by the Upper House to consider the amendments introduced in the Budget by the Lower House. And should the Peers find it difficult to concur with the decision of the Representatives, a conference of commissioners of the Houses must be held. Then last of all, the results of the conference must be duly considered by the Lower House before the Budget can be again sent up to the Upper House. These proceedings will, in the estimation of the *Choya*, require more than 60 days. Meanwhile, the next fiscal year will have dawned, while the Budget has not yet been brought into actual existence." Our contemporary thus thinks it by no means impossible that the contingency contemplated in the 71st Article of the Constitution may actually come to pass.

The *Nichi Nichi Shimbun* refrains from alluding to various rumours that are current as to the motive of those who proposed a radical plan of retrenchment and of those who opposed such plan. Our contemporary, like the *Choya*, is afraid that, if the utmost care be not taken to complete the Committee's report as speedily as possible, and, even if the Committee finish their work speedily, difference of opinion on the question may occur between the Upper and the Lower Houses, and the provisions of Article 71 of the Constitution may come to be applied, that is to say, the preceding year's Budget will be carried out by the Government.

Mr. Shimada Saburo, writing in the *Mainichi Shimbun*, observes among other things that he does not consider it illegal on the part of the Committee to extend its researches to the organizations of the Departments of State, by way of explaining how the reduction of expenditures can be effected. He also censures the conduct of some politicians who do not scruple to circulate various mischievous rumours concerning the motives of the members of the Committee on the Budget. All the misunderstandings that have arisen are ascribed by him to the circumstance that the Chairman of the Committee did not report the various stages through which the investigations of the Committee had passed.

The *Jiyu Shimbun* is opposed to the plan of interfering with the prerogative of the Sovereign as to the organization of the branches of administration. The *Nippon* is of the same way of thinking. The latter paper discusses the question at great length, and concludes that such a plan is bad in principle and pernicious in practice, and that it is a very poor way of embarrass-

ing those in power. On the whole, the vernacular press is tolerably unanimous in disapproving of the conduct of the *Kaishin-to* members of the Committee on the Budget.

The passing through both Houses of the Bill for the postponement of the date of operation of the Commercial Code, has been received by the press with loud acclamations. Two articles that have appeared in the *Fiji Shimpō* on this subject are especially worthy of being reproduced. In the first article, our contemporary observes that Japanese society, political and social, being at present in the course of entire renovation, codification of new laws is one of the most important undertakings which the country is now called upon to accomplish. But with regard to the codes of laws that have been promulgated by the Government in the course of the present year, especially the Commercial Code, our contemporary thinks that there are good reasons to take exception to them. "The object of the Commercial Code," says the *Fiji*, "may have been to meet the demands of New Japan, but it may with reason be feared that the effect of its operation may be prejudicial to the national progress and development, as it may retard the smooth movement of social affairs. Customs and manners being the principal factors that constitute the basis of a country's progress and development, no set of laws compiled on the model of a foreign code, can be expected—no matter what regard may have been paid to our customs and manners—to be free from the evils that usually attend a departure from ordinary courses of procedure. In other words, the new code under consideration, instead of being the natural outcome of national customs and manners, is in fact a device for restraining those that at present exist." Our contemporary, then, characterizes as shallow and unsympathetic the contention usually put forth by the defenders of the Commercial Code, that, Japan having adopted with success all the latest inventions of modern civilization, there is no reason why she ought not to adopt the laws of the Occident; because such a contention ignores the vital difference that exists between things material and things immaterial. The *Fiji* is thus very glad that the Diet has voted for postponement, but as to the period of postponement our contemporary goes farther than many of those members who voted for the Bill may be prepared to follow. Our contemporary wants to have the operation of the Commercial as well as the Civil Codes postponed "ten or twenty years," so that there may be ample time to revise them in a thorough and satisfactory manner.

In the second article, the *Fiji* expresses agreeable surprise that the Diet has so early in its existence proved itself to be strong enough to score against the Government such a victory as it has just obtained on the question of the Commercial Code. While, on the one hand, congratulating the members of the Diet on a signal victory, our contemporary, on the other, warns them, in the words of the proverb, "to tighten the cord of your helmets after a victory." They have before them questions bristling with far more difficulties than the one just settled, such, for instance, as the Budget and the reduction of taxes. In attacking these questions, our contemporary advises them not to be hurried by the recollection of their recent easy victory into any rash and precipitate movement; for unless they keep within the bounds of reason and moderation, they may very probably plunge themselves into a course of action which, by producing a serious collision between themselves and the Government, may possibly do incalculable damage to the smooth development of constitutional government in Japan. They are, therefore, earnestly entreated to be patient during the first two or three years, and for the present to be contented with the victory they have just obtained.

The *Kokkai* applauds the conduct of the majority of the Peers on this question. When the Bill was sent up to the Upper House, the anxiety

of the public was great as to the final attitude of that House. It was at one time seriously apprehended that the House might declare itself opposed to the decision of the Representatives: so assiduously did the defenders of the Code endeavour to make converts by their personal persuasion and by the papers which they distributed among their fellow members. Indeed some members of the Lower House—the *Kokkai* goes on to remark—were overheard in the lobby to observe with a great deal of warmth that those members of the Upper House who occupy official positions being mere tools of their superiors in the Government, the constitution of that House must be entirely remodelled. Had the Peers voted against the Bill, such opinions as this would have acquired much influence, and there might have been engendered ill feelings of a serious character between the two branches of the Legislature. Our contemporary, therefore, is very glad that the Peers have so far appreciated the tendency of the public mind as to concur with the verdict of the Representatives on this question of the Commercial Code. The Peers are enjoined to check whatever extravagant and precipitate action the Representatives may commit, but they are advised on all other occasions to concur with the wishes of the people as manifested through the decisions of the Lower House.

The resignation of Count Yamada, Minister of Justice, which has been caused, it is said, by the fate of the Bill above alluded to in the Diet, and by the decision of the Cabinet to approve of the Bill, seems to be regarded on all sides as likely to receive the Imperial sanction, though at present he is only temporarily relieved from his Ministerial duties. The names that have thus far been mentioned in connection with portfolio of Justice, are those of Count Oki, President of the Privy Council; Viscount Tanaka, once Vice-Minister of Justice and at present Privy Councillor; Mr. Kono Togama, Privy Councillor; Mr. Hosokawa Junjiro, Chairman of the Committee of the whole House in the House of Peers; Mr. Iwamura Michitoshi, formerly Minister of Agriculture and Commerce, but now Privy Councillor; and Mr. Mitsukuri Rinsho, the present Vice-Minister of Justice. Of these Mr. Iwamura is, according to the *Yomiuri Shimbun*, the most likely candidate.

The *Hochi Shimbun* regrets that the turn which things have taken has made it necessary for Count Yamada to resign his position. The Cabinet is no doubt extremely unwilling to part with him under the circumstances, but it has, says the *Hochi*, to weigh the balance between its desire to keep him and the grave responsibility of rejecting the united resolution of both Houses of the Diet on a question of great importance. Speaking for the sake of Count Yamada himself, our contemporary seems to think that under present circumstances the most honourable course of action that he can take as a constitutional Minister is to leave the Government.

The *Fiji Shimbun* approves the manly course that Count Yamada has taken in resigning his position. The Radical organ is glad that he has done so, not only for the sake of the Count himself, but for the reason that he has thus set a good example before the rest of the Cabinet Ministers how to act under like circumstances.

The *Yomiuri Shimbun* is also glad that Count Yamada has provided a good precedent for all constitutional Ministers of the future. But at the same time, our contemporary thinks that the Count has been rather hasty in presenting his resignation. He ought to have waited until the fate of another Bill to be soon debated in the Diet had been known, namely, the Law of the Constitution of the Courts of Law Amendment Bill. Should this Bill pass through both Houses, the collegiate system of law courts, the introduction of which engaged so much the attention of the Count, will have to be abolished.

Why not be a little more patient and watch the fate of this Bill? It would have been time enough for him, says our contemporary, to resign upon the passing of the Bill in question.

The long talked-of organization of the National Liberal party came off on the 21st inst. The ceremony of organization was performed at the Nakamura-ro restaurant, Ryogoku, Tokyo. Mr. Yoshida Masaharu opened the ceremony by an address in which he briefly stated the history of the formation of the party. The chair was then taken by Mr. Mayeda Kagashi, and speeches were delivered by Messrs. Akiyama Kotaro, Yamagiwa Shichishi, and Ayai Takeo. Those present numbered about three hundred, including two young girl politicians, named Takakuwa Shizu and Inouye Tei, aged about 21 or 22 and 15 or 16 respectively. On the 25th instant, the committee of the party held another meeting, at which the following programme was adopted:—(1) To augment the Navy, (2) to reduce public expenditure by 8 million yen, (3) to reduce the land tax, and (4) to introduce amendments in the Conscription Law, with a view to increasing the reserves by limiting the term of actual service to two years. According to the *Kokkai*, the National Liberal party is a far more insignificant body than it at first promised to be. The *Kokken-to* of Kumamoto and the *Kyuyu-kai* of Niigata stand aloof from it, while Viscount Tani and his followers are said to be at least unsympathetic with it, to say nothing of the hesitating attitude of the former members of the defunct *Genyo-sha* of Fukuoka.

The debate on Law No. 84 has been deferred till the Diet meets after the New Year's recess, the Houses having been adjourned on the 25th inst. to the 8th of January, 1891. With regard to the Diet's recess, the *Mainichi Shimbun* and the *Yomiuri Shimbun* laugh at the alacrity with which the Houses decided to have nearly a fortnight's holiday. Hitherto it has been the fashion on the part of politicians out of power to say that Government officials have too many holidays, but henceforth they ought to be ashamed to repeat such clamour, as they have taken a holiday which is much longer than that enjoyed by the official class, and this, too, at a stage when the Diet ought to be extremely frugal of its time.

The *Mainichi Shimbun* is still engaged in discussing the question of the defences of the country, and deals with the various improvements that are to be introduced in the Navy. The question of the augmentation of the Navy also engages the attention of the *Chora Shimbun* in a series of articles not yet concluded.

The *Fiji Shimbun* has brought to a close an instructive essay on the future prospects of parliamentary institutions in Japan. Our contemporary is of opinion that, though the final establishment of the Diet has been in the present year, the birth of parliamentary institutions took place at the time of the Restoration, while a state of things had for a long time been maturing under the Tokugawa Government for the adoption of a constitutional form of Government. Parliamentary institutions thus resting in Japan on a firm historical basis, the *Fiji* is confident of the future of the Diet.

The *Hochi* has published three articles on the Japanese Diet, said to have been contributed by an Englishman who signs himself H.J. The writer gives much wholesome advice to the members of the Diet. The *Nippon* is publishing a long series of interesting articles on an imaginary country inhabited by insane persons, the object of the writer being to place before the reader a vivid picture of the inner side of society. The *Kokka*, as usual, devotes several articles to the discussion of questions bearing on coast defence and the foreign relations of the country, but space forbids us to reproduce these essays, interesting as they always are.

*JAPANESE PUBLIC MEN AS SEEN
THROUGH THE MEDIUM OF FO-
REIGN TRANSLATIONS.*

IF any estimate were to be formed of Japanese statesmen from the English rendering of their speeches published by some of the local foreign journals in Japan, they would have to be written down as persons of very confused intellect and still more confused language. The EMPEROR'S speech at the opening of the Diet afforded a capital opportunity for a display of eccentric and laughable translation. Not indeed that such displays had been wanting in the past. But the opening of the Diet opened also a new and exceptionally entertaining chapter of blunders, and it has now become a matter of public marvel that any newspaper, however perfunctory its management and however illiterate its editors, should publish the nonsense recently appearing as so-called translations of the speeches delivered by Ministers of State in the Diet. False renderings by which the meaning of the original becomes altogether distorted may be regarded as more or less accidental. The system pursued is certain to lead to such errors. The translation is entrusted to a Japanese possessing a very limited knowledge of English; a knowledge quite insufficient to enable him to render correctly articles and speeches couched in difficult language and dealing with difficult topics. The number of Japanese capable of rendering such matters into accurate English is few and far between. No men of adequate calibre are to be found on the translators' staff of the local English journals. The Japanese to whom is entrusted the important task of laying the thoughts of their countrymen before the foreign public, are men possessing only a smattering of English. They struggle hard and earnestly, no doubt, to grapple with the great difficulties of the Japanese text, but as a rule the result is exceedingly lame and misleading. These translations are then placed in the hands of an Englishman who has no knowledge whatever of Japanese, and whose function is simply to remove the crudities of the translators' English, to string their disjointed sentences into some semblance of continuity, and to impart to the whole a veneer of polish. How much the meaning of the translation suffers at the hands of these dressers, who treat it simply as a bit of English to be licked into presentable shape, and who have no means of ascertaining its fidelity to the original, it would be difficult to say. What is certain is that the articles as they ultimately appear in the columns of the local press are calculated only to provoke derision and to bring their writers and speakers into contempt. Mistakes of meaning are inseparable from the system, but what strikes us as most curious is that care is not taken to obtain even an approach to sense and grammar. Surely it ought to be pos-

sible to comply with the ordinary rules of syntax and construction, and to obtain some appearance of coherency. Take for example a sentence like the following:—"Even if full arrangements can be made to-day, the resources of the country will not permit its being carried out." Can anybody discover what is meant by this "it" that cannot be carried out? Again, consider the following:—"Although the incompleteness of the Navy is a matter that is much discussed, it is nevertheless natural that those who are in a position to do so should sacrifice themselves for the welfare of their country. Still I feel some doubts of its success." Probably such a jumble of inconsequential nonsense was never printed in a newspaper before. If any of our readers can make head or tail of it their perspicuity must be very exceptional. If the Minister of State for the Navy had talked such arrant nonsense in the House of Representatives he would have met with a curious reception. Take yet another example:—"Common education is for school boys in order that they may become the basis of the State, promote its welfare and increase the happiness of the people, by caring for the physical development of their bodies and the moral basis, common knowledge and ability, necessary to them in after life will be obtained. Therefore ever since the Restoration the Government have been busily following the policy of making all boys who are of age to attend school to do so, and are determined not to neglect its further stimulation." It really seems as if the writer who strung these striking sentences together had thrown the words into a hat and, taking them out at random, set them down as they came. Fifty examples of equally flagrant absurdities could be quoted from the translations daily placed before this community as reflections of contemporaneous Japanese thought. We do not know whether to attribute such palpably defective work to the contemptuous carelessness which too often disfigures the treatment of Japanese affairs by local foreign journals, or to chronic incompetence. Whatever be the explanation, the results are well calculated to confirm foreign ignorance of Japan, and to strengthen foreign want of faith in the Japanese.

*THE HOUSE OF REPRESENTATIVES
AND THE COMMERCIAL CODE.*

IT must be confessed that the House of Representatives' first action of a legislative character does not reflect great credit upon it. The opponents of the new Commercial Code succeeded in carrying with them three-fourths of the House, but on reading the debate carefully it is difficult to discover any solid reasons for this consensus of opinion. Only two arguments were advanced for the postponement of the Code's operation. The first was that its phraseo-

logy is novel and perplexing; the second, that it contains provisions opposed to existing Japanese customs. If these two points had been established, they would certainly justify a postponement in order to give time for the amending of the Code. But they were not established. As to legal phraseology, it is to be remarked that legislators everywhere employ language not easily understood by ordinary folks. In Japan this must be especially true, because any body of Commercial Law now enacted necessarily provides for transactions and cases which were not contemplated before the advent of Western civilization. The Diet itself furnishes a conspicuous example of the linguistic change that has occurred in Japan during the past 20 years. Its debates bristle with words which would have been absolutely unintelligible at the beginning of the Meiji era, and even the members who found sharpest fault with the new-fangled phraseology of the Code, stated their objections in language which was itself an answer to their argument. Nevertheless, among those who voted against the Code were many barristers and students of eminence, and it must be presumed that these gentlemen were prepared to play a constructive as well as a destructive part. If they denounced the faulty language of the Code, they doubtless saw their way to its sensible improvement. Obviously it is not for foreign critics to pronounce a hard and fast opinion on such a subject, but the point we make is that if faultiness of phraseology is a genuine reason for the postponement of the Code's operation, clear evidence of the fact ought to have been adduced in the House. No such evidence was adduced. The members were left to take the fact for granted, a proceeding which, though justified by its sequel, is scarcely consistent with the parliamentary methods followed in the West. The same criticism applies to the question of the Code's provisions. Member after member declared that these provisions conflict with Japanese commercial customs now in vogue, but not one member took the trouble to demonstrate the points of conflict. Surely if there exists any divergence so marked as to render the new law vexatious and unsuitable, there should have been no difficulty in citing proofs from every-day practice. What are these Japanese commercial customs which cannot be conveniently brought within the purview of Western laws? We have never heard of them except in connection with this new Code, and although the Code has been condemned on account of their nominal existence, we remain as ignorant as ever about them. There has been some talk about the novelty of the method of book-keeping indicated by the Code, but this objection loses all force when we remember that the new method is in no sense compulsory. Merchants may go on to the Millennium

writing their books as before, and so long as they keep out of Court the law will not concern itself about their practice. The only difference between the results of observing and neglecting the methods of the Code, is that books kept as directed would possess greater value in case of an appeal to the Law Courts than books kept in the old form. This point can scarcely have exercised any serious influence on the Diet's vote. Either that vote was based upon sentiment rather than upon reason, or some customs exist of which foreigners have no cognisance, and which are at variance with the established methods of business as conducted in Europe and America. It is difficult to accept the latter alternative. When there is question of domestic habits, traditional creeds or national costume, everyone can appreciate conservative tendencies. But never since men became gregarious have the principles of sound trade varied, and if in the West there have sprung up various well recognised means of promoting credit, facilitating transactions, and securing integrity, Japan can no more refuse to accept those means than she can return to feudal government, torture, and national seclusion. If there are any essential Japanese commercial customs worthy of preservation, it ought to be easy to enumerate them, and the fact that no member of the House of Representatives attempted this task, seems to indicate that the verdict of the House was regarded as a foregone conclusion, and that some consideration not apparent on the surface weighed effectually with those who voted against the Code. What adds to the probability of this hypothesis is that good cause certainly was shown for the speedy enforcement of the enactment. Several members who, whether as barristers of repute or merchants of standing, deserved to be heard with respect and attention, explained in forcible language that sweeping reforms are earnestly needed in the domain of bankruptcy and company laws, and that the new Code would have produced most beneficial effects in these directions. Indeed there was no occasion for the public to be told that such is the case. At the root of all the distrust felt by foreigners towards the administration of justice in Japan, is the want of anything like good bankruptcy laws. The most able and upright judge and the most efficient enforcement of the law cannot secure justice if the law itself is inadequate. The present law of Japan seems to have been framed expressly for the benefit of defaulting debtors, and foreigners have learned by bitter experience that to appeal to such a law is mere waste of time and money. Then again it is unquestionably necessary that legal machinery should be provided to control the mania for companies which has taken such strong hold of the Japanese public. At present dishonest speculators are free

to take unrestrained advantage of this mania, and the House of Representatives has deliberately extended their charter of chicanery. If the House was determined to postpone the operation of the Code as a whole, it might at least have made an exception in favour of the portions relating to bankruptcy and companies. Its vote for wholesale rejection does not strike us as a very sound or discriminating exercise of the legislative powers vested in it. We are strongly disposed to think that sentiment had much to do with this affair. Some members doubtless voted against the Code for purely party reasons. Any enactment of the present Government's would meet with their condemnation. Other members, however, appear to have thought that the operation of the Code had been hastened for the purposes of Treaty Revision. Stated otherwise, this meant that the interests of 40,000,000 of Japanese had been subordinated to the convenience of a handful of foreign immigrants. Such a herring drawn across the trail was enough to divert the whole Japanese nation, in its present mood, from a sober, sensible course. The Diet evidently has not escaped the contagion. In the abstract it must be frankly admitted that to put the new Commercial Code into operation two years earlier than the new Civil Codes which have already been promulgated, seems a disjointed style of legislation, and that the necessity for having a Commercial Code in Japan distinct from the Civil Codes remains to be proved and might be very difficult to prove. But if these not unreasonable considerations weighed with the House, they were not clearly stated, and on the whole we cannot think that the debate of the 17th and 18th inst., and its sequel, reflect much credit on the thoroughness and sobriety of the House of Representatives.

THE NEW LECTURE HALL IN HONGO.

THE great work undertaken by the Canadian Methodist Mission in Japan has now been carried to the verge of completion. We say the work undertaken by the Methodist Mission, but it would in truth be more correct to say the work conceived by the enthusiastic hopefulness and executed by the unconquerable energy of perhaps the most prominent member of that Mission, the Rev. Dr. EBV. We often wonder whether the Japanese have begun to think seriously about the immense contributions to their moral and intellectual development made by Western nations out of pure philanthropy and for the simple sake of good. In all parts of the country extensive educational establishments, founded and for the most part supported by foreign munificence; in all parts of the country scores of highly gifted men devoting their almost gratuitous

efforts to the cause of human progress, represent a gradually accumulating debt which Japan owes to the West, and which she is only asked to repay by making the fullest possible use of the benefits thus conferred on her. People may talk of the illiberality displayed towards Japan's political aspirations; may claim that she has cause for umbrage because her rights as an independent nation receive tardy recognition; may complain that the value of her progressive efforts is grudgingly acknowledged; may assert that the merchants at the Treaty Ports refuse to be trustful or appreciative, and may draw striking comparisons between the arbitrary policy pursued by Western States thirty years ago in compelling Japan to emerge from her seclusion, and the selfish sequel of that policy to-day, namely, the contention practically advanced that her emergence must remain partial until foreigners can lay aside the distrust which they refused altogether to respect when she exhibited it—all these counts may be collected to form an impressive indictment, but on the reverse of the bill there is written a story which more than effaces that other record. The political methods of the West and the hard selfish tactics prescribed by the struggle for national supremacy, a struggle from which Japan herself cannot for a moment hope to escape, are clearly enough indicated by the conduct which has begun to render foreigners so unpopular in Japan. But if Japan desires to gauge the true sentiments of the West towards her, she must not neglect to consider the immense efforts made in her behalf by the numerous representatives of European beneficence and benevolence, who have devoted their lives to her moral and intellectual advancement. Among these nobler records the work spoken of above is entitled to a high place. It is a large and imposing building, standing in Haruki-Machi, one of the principal streets of Hongo, the students' quarter of Tokyo. The edifice has not yet attained its full dimensions. Want of funds and perhaps want of faith have curtailed the design, so that the hall, instead of affording accommodation for some two thousand persons, as is ultimately hoped, has been temporarily reduced in dimensions so as to offer seating room for only half that number. Allusions more than once made in these columns to the story of the Central Tabernacle, as the building is called, have doubtless familiarized our readers with its purposes. Some seven or eight years ago, Dr. EBV and other energetic missionaries conceived the idea of holding a course of Lectures in English and Japanese which should be open to all comers and should take for their subjects ethical and moral problems likely to interest the educated classes. The idea of Dr. EBV in inaugurating this course was to present Christianity rather on apologetic, evangelistic, and social lines than on ecclesiastical or theological. The lectures were

so signally successful that their repetition on a large scale became clearly indicated as a missionary duty. But one great difficulty stood in the way, the want of a suitable lecture hall. There was actually no place in Tokyo where the necessary accommodation could be obtained without incurring deterrent expense. If the scheme was to attain even a part of its capabilities, a lecture hall must be built and equipped. This was the task which Dr. EBY proposed to himself, and which he has now succeeded in carrying out. It is scarcely necessary to say that if the hall was to be at all adequate, a very large sum had to be expended upon its erection. The original calculation, we believe, was 25,000 dollars, an amount not to be procured without some exceptional exercise of energy and enthusiasm on the part of the promoters, and a remarkable display of generosity on the part of the charitable public. We cannot speak with any accuracy as to the various steps taken to obtain the money. Charity working in this whole-hearted manner is never ostentatious. No lists have been published in Japan showing the number and names of the subscribers. A good deal of the money was obtained by Dr. EBY in Canada, but some 5,000 yen was subscribed in Japan, a result which certainly deserves to be recorded. Material assistance came also from another quarter. This last point constitutes quite an exceptional feature of the scheme. There are many men in the West who, though not possessing ready money to subscribe to philanthropic purposes, possess the means of earning money, namely, intellect and accomplishments, and are willing to devote these to the promotion of a benevolent end. A number of such men have joined Dr. EBY's work. Coming to Japan, they have sought and found employment of a literary or technical character, and whatever they earn over and above the cost of living, they contribute to the cause they have at heart. Already from this source some 3,000 dollars have been subscribed in less than a year. The plan is one which need be only stated in the simplest terms to command the hearty admiration of the public. We should probably best consult the wishes of these quiet and sturdy workers in the cause of good did we refrain from any eulogy of their efforts. But it is pleasant to know that such men are among us, spreading throughout Japan a strong appreciation of the noblest aspects of Western civilization. From these various sources then the necessary funds were gradually obtained, and the Central Tabernacle has so far approached completion that in a few days it will be ready for use. We need not weary our readers with the dimensions and the architectural details. It will be enough to say that the building, as it now stands, is a handsome, massive structure, so contrived as to be available for gatherings of from fifty to a thousand

persons. Its interior arrangements are excellent and attractive. Furnished with a platform for organ and singers, with galleries for stereopticon purposes, with electric lights, stained glass windows, and so forth, its dimensions admirably proportioned, and the means of ingress and egress well contrived, it forms a hall of which Tokyo has reason to be proud. As usual in such large undertakings, the actual cost is found to exceed the estimates. Moreover, a great calamity befell the building when it had nearly reached completion; a fire, communicated to the scaffolding from a neighbouring house, caused damage which involved an additional expenditure of 3,000 dollars. Temporary furniture will consequently have to be put in at first, but whatever economy is exercised in this respect, a sum of about 1,000 yen is still urgently needed, and a concert on the 27th instant is projected as a means of raising this money. We hope that the public will give generous support to this latter scheme.

THE VINDICATION OF WARREN HASTINGS.

THE Government of India has just issued at Calcutta three portly volumes which appear likely to revolutionize current history in regard to some of the most striking episodes of British history in India. The publication came about in this way. Professor FORREST, who was appointed some years ago to take charge of the records of Bombay, and to superintend the production of such of them as seemed of historical value, performed the work so well that he was invited by the Government of India to go to Calcutta and take charge of the political records in Fort St. George, with a view to performing a similar task of selection in their case, and reproducing those selected so as to make them accessible to all students. These new volumes are among the first fruits of Mr. FORREST's appointment. They are entitled "Selections from the Letters, Despatches, and other State Papers preserved in the Foreign Department of the Government of India, 1772-1785." Now, 1785 was the year in which WARREN HASTINGS left India to meet the charges made against him by BURKE and others; and Professor FORREST's volumes therefore deal wholly with the period of HASTINGS' governorship, and in the introduction he discusses in the light of the original documents, now for the first time made public, these charges, which were made in the first instance by Sir PHILIP FRANCIS, adopted subsequently by BURKE and SHERIDAN, and popularised by MACAULAY in his famous essay. Prof. FORREST does not hesitate to say that not one of these charges is true, and that HASTINGS' own official correspondence shows that they are wholly unfounded. HASTINGS himself, at the

time of the famous impeachment, said over and over again that if the directors of the East India Company would produce these documents they would be his best justification; but the directors refused to produce them, and it is only now after a lapse of nearly a century that they are made public. Taking the principal charges, which MACAULAY has made known to every schoolboy, Professor FORREST in his introduction treats them all in succession. The first of these, for which MILL in his "History of British India" is mainly responsible, is that he withheld from Shah ALUM tribute which had been promised the latter, and that he handed over certain of Shah ALUM'S districts for a sum of money to the Nabob Vizier, SALUM, the Mogul Emperor. We have a long minute by HASTINGS explaining the reasons for his policy towards this potentate. Shah ALUM was, at the time, a tool in the hands of the Maharattas, who were deadly enemies of the British, and giving tribute to him would have been giving money to them; and as for his grant of territory to the British, HASTINGS says the latter had already taken it while at war with him, and that he had no power either to give or withhold it. Here are HASTINGS' own words on the subject—

Whatever policy suggested the first idea of the tribute, and whatever title he may be conceived to have had to the payment of it while he remained under our protection, and united his fortune with ours, his late conduct has forfeited every claim to it, and made it even dangerous to allow it, even if the resources of Bengal and the exigencies of the Company could any longer admit of it. Our conduct towards him has certainly afforded matter of admiration to the whole people of Hindustan, whether they construe it as the effect of a mistaken principle of duty, the just return of benefits received, or attribute it to some hidden cause. We have persevered with a fidelity unknown to them in an unshaken alliance to a pageant of our own creation, and lavished on him the wealth of this country, which is its blood, although not one of his own natural subjects has ever afforded him the least pledge of voluntary obedience, although our constituents have been compelled to withhold the legal claims of our own sovereign, although we have loaded them with an accumulated debt of a crore and a half of rupees, almost the exact amount of the sums remitted for the use of a man who, in return, has ungratefully deserted, and since headed armies against us.

Next as to the famous charge respecting the Rohilla war on which MACAULAY has expended his brilliant eloquence. That charge is that HASTINGS hired a body of British troops to the Nabob Vizier in order to destroy the liberty and take the territory of a brave nation who had done us no harm and had given us no cause for war. MACAULAY describes the Rohillas as "the gentlemen of India, whose veins were full of the high blood of Afghanistan." "It is infamous," says MACAULAY, summing up this charge, "to commit a wicked action for hire, and it is wicked to engage in a war without provocation." The facts are that the Rohillas were not a nation at all, but a body of Afghan freebooters; they had been beaten over and over again by the Maharattas, and Major HANNAY, who at the time knew them well, describes their national characteristic as want of sincerity. Their chief rose to power by treason, and Professor FORREST says that

the only title he had to Rohilkund was the title of fraud. The British fought with the Rohillas under the utmost provocation. They had called in the Nabob Vizier to help them in a war against the Maharattas, and had made a treaty for the purpose in the presence of the English General. The Maharattas were driven out by the Vizier and the British, but the Rohillas refused to pay the Vizier the amount for his assistance which they had promised him by solemn treaty. Moreover, it appeared that they had treacherously aided the Maharattas against their ally, and in consequence the Vizier determined to punish the Rohillas for their breach of faith. Hastings did all he could at the time to dissuade him from taking this step, regarding it not as unjust but impolitic, but ultimately he was compelled to give way, and, by the terms of the alliance with the Vizier, to aid him in punishing the Rohillas who had broken faith with the British as well as with the Vizier. But HASTINGS was very careful to provide that the British were to be employed only on service approved by their Commanders, and he himself described it as a perversion of fact to say that the British arms and honour were at the absolute disposal of the Vizier. It was asserted that HASTINGS looked calmly on at the ravages and butchery of the Vizier's troops in Rohilkund, but here are HASTINGS' orders to Mr. MIDDLETON his agent with the Vizier, to contradict this:—

You will take an immediate occasion to remonstrate with him against every act of cruelty or wanton violence. Tell him that the English manners are abhorrent of every species of inhumanity and oppression, and enjoin the gentlest treatment of a vanquished enemy. Tell him my instructions to you generally, but urgently enforce the same maxims, and that no part of his conduct will operate so powerfully in winning the affections of the English as instances of benevolence and feeling for others. If these arguments don't prevail, you may inform him directly that you have my orders to insist upon a proper treatment of the family of Hafiz Rahmat; since in our alliance with him our national character is involved in every act which subjects his own to reproach, that I shall publicly exculpate this Government from the imputation of assenting to such a procedure.

It would be difficult to find anything more peremptory and explicit than this, and accordingly Professor FORREST sums up the whole case in these terms:—"History furnishes no more striking example of the growth and vitality of a slander. The Rohilla atrocities owe their birth to the malignity of CHAMPION and FRANCIS; their growth to the rhetoric of BURKE; and their wide diffusion to the brilliancy and pellucid clearness of MACAULAY'S style."

In regard to the famous trial and execution of NUNCOMAR, although the papers on this matter are very full, Sir JAMES STEPHEN, in a work published a few years ago, completely disposed of the statement that HASTINGS was concerned in the trial of this miscreant. MACAULAY says that HASTINGS murdered him at the instigation of Sir ELIJAH IMPEY, the Chief Justice. It was proved to be

absolutely incorrect. Then as to the treatment of CHEYT SENGH, Rajah of Benares, MACAULAY'S charge is that "HASTINGS was determined to plunder CHEYT SENGH, and for that end to fasten a quarrel on him. Accordingly the Rajah was required to keep a body of cavalry for the service of the Government." It is clear now, however, that HASTINGS had no thought of plunder. The Rajah was not an independent prince at all, but a British vassal, and therefore bound to render military service. Professor FORREST treats the matter in this way:—

The interest and security of the country demanded that he should contribute money and troops for its defence. It was also in accordance with long-established custom that a vassal should afford aid to the Sovereign State in money and troops. The conduct of Cheyt Singh in hesitating to afford the necessary aid to his suzerain at a time of great danger was contumacious and refractory, and deserving of punishment. When we consider the state of India at that time, when we consider that the English were surrounded by enemies and in hourly expectation of the arrival of a powerful French armament, it is difficult to regard the imposition of even a too heavy fine on a refractory vassal as an act of criminality. In enforcing these demands, Hastings was actuated by no personal or malicious motives, but was compelled by the pressing exigencies of the hour and the desire to save India to Great Britain. "I had no other view in it," he said, "than that of relieving the necessities of the Company by an act which I considered to be strictly just."

Finally there is the alleged spoliation of the Begums of Oudh. It appears now that HASTINGS was thoroughly persuaded of the treachery and rebellious conduct of these ladies, and he regarded the guarantee given them by the British to be terminated by their seditious behaviour. It may be, according to Professor FORREST, that he was more severe with them than he ought to have been, but on this matter again here are the words of the editor fresh from a careful study of all the original documents. "If the evidence of some actors in these events, and of many who must have known about them at first hand, is to outweigh the presumptions and diatribes of his enemies, he had solid foundation for his belief. In order to recover the treasure the Nawab and his Ministers had to adopt severe measures towards the two eunuchs who had the chief influence over the Begums. The cruelty practised by the Nawab and his servants has been greatly exaggerated, but it was sufficient to have justified the interference of the Resident. To have countenanced it by transmitting the orders of the Vizier was a grave offence. But for what took place, HASTINGS at Calcutta cannot be held responsible. He ordered the Resident not to permit any negotiation or forbearance, but there is a wide gulf between legitimate severity and cruelty." On the whole matter the editor comes to the conclusion that, while the vindication of WARREN HASTINGS' conduct in the administration of India has been peculiarly rigid, "its fair fame will not suffer from an examination still more rigid and dispassionate." It is quite clear that Professor FORREST has made out a case for the reconsideration of

the moral character of WARREN HASTINGS' administration in India. And he has also supplied the materials to those who still believe in the accuracy of the historical verdicts of MILL and MACAULAY. Years must necessarily elapse before the final verdict of history on one of the greatest of British statesmen is pronounced, but it is satisfactory indeed to know that one careful and impartial student emerges from a study of all the original authorities for the period, with the confident assurance that above all things WARREN HASTINGS' administration of India was a humane and an honest one. For these are precisely the qualities which critics have hitherto denied to it.

THE "REVIEW OF REVIEWS."

MR. W. T. STEAD sometimes reminds us very strongly of the old Puritans. Zeal-for-the-truth-Thoresby, of Thoresby Rise, Deeping Fen, we are told, discoursed gravely on the road to Horncastle fair on saving grace and a number of other doctrinal points, and he did the same on the road home; but meantime he had driven a hard bargain for his pigs, and had succeeded in beating down the price of the heifer which he was taking back. Mr. STEAD too discourses on saving grace, and with extraordinary business keenness and skill establishes a magazine by the aid of a newspaper capitalist, and in a few months, when success is assured, becomes sole proprietor and then pushes its sale with unparalleled results. As to the *Review of Reviews* itself, there can be no question whatever of the skill and ability with which it is edited, and of its utility to the English reading public all over the world in these days of a huge magazine literature. Mr. STEAD himself contributes a very clever opening article in which the news of the month is summarized and commented on under the title "Progress of the World." Then follows an original character sketch of some famous person, such as STANLEY, BOULANGER, Mrs. FAWCETT and so on. And finally (we are referring now only to the original part of the magazine) comes a detailed abstract and discussion of some important work—very frequently one which otherwise would not seize the attention of the casual reader. The remainder of the *Review* is a sort of conspectus of all the leading magazine articles, and needless to say is extremely well done. A more admirable method for enabling the average man or woman to catch the currents of thought in the world and on various questions, it would be impossible to conceive. The published price of nearly 100 pages of matter is 6d., and the periodical is therefore brought within the reach of everybody. But the methods employed for pushing its sale are somewhat unusual. In a prospectus written by Mr. STEAD himself, and pitched in an

extremely high key, he appealed to all who had the good of their kind at heart to aid him in his work. He was going he said, to advocate the cause of the poor and needy. He was to be an apostle of a kind of Christian Socialism; he wished the office of his work to be an exchange for all who had moral wants and all who could supply them; he desired every person throughout the country who was willing to help him in this task to communicate with him, and in a short time he was thus enabled to establish what he calls a "corps of helpers" in this work of moral regeneration, who incidentally pushed energetically the sale of the *Review of Reviews*. From month to month he has taken up with the aid of his Helpers such work as supplying literature to workhouses and hospitals, obtaining country holidays for poor children and so on. Every month he issues a new prospectus usually headed "Please give this away, or leave it in any public place." In one of the latest of these he addresses an appeal "To those who wish to help," in the course of which he says that one distinguishing feature of his magazine has been the attempt to secure the active coöperation and assistance of all its readers for the collection of information, and the execution of the various philanthropic and other objects advocated in its pages. At present he says he has 500 Helpers all over the country and gives a list, but he wants more, he says, in order to have one at least in every constituency, and he wishes that one to be a nucleus of a local association of Helpers. In other words he wants to have—and is in fact getting—a very large number of unpaid canvassers and advertisers throughout the British Empire. That they do good work is undoubted, but that incidentally they add enormously to the sale of the magazine is equally undoubted. When he started, his most sanguine supporters put the circulation of the magazine at 30,000. In September he issued 90,000, in October 100,000, and the first edition of the issue for November will be 125,000. Mr. NEWNES, who has made his fortune by a little weekly penny paper of scraps called *Tit Bits*, financed the *Review of Reviews* at the outset, but in the fourth month of its age he had disappeared, and Mr. STEAD moved into splendid new offices on the Thames Embankment, and was himself the sole proprietor. Its advertisements are now about 30 pages, which means a small fortune, and month by month new "features" are being added. About two months ago it occurred to Mr. STEAD that artistic photography did not receive sufficient notice in the English Press. Accordingly he has a special article every month dealing with the photographs of the month. He has introduced also a scientific *causerie*, and the illustrations have become more and more numerous. The last number issued

contains a postal wrapper carefully gummed, on the inside of which is printed the injunction to "Remember your friends abroad and your poor neighbours at home," and in which all readers are invited to send the *Review of Reviews* to soldiers in India, sailors on foreign stations, lighthouse-keepers, workhouses, settlers in the bush, hospitals, and so on, and, says Mr. STEAD, "by writing your name on the outside of the wrapper the *Review* will become a welcome medium of communication between you and your friends afar. You may not have time to write, but the *Review* sent monthly will act as a pleasant reminder of your existence." The wrapper in question contains copious advertisements of the *Review*, and of various additional publications of Mr. STEAD'S. A more energetic or enterprising conductor for a magazine it would be impossible to conceive; every month there is something new, and around the whole there is the reflection that in pushing the sale of the *Review of Reviews*, in advertising it right and left, you are doing God's work.

FAREWELL DINNER TO THE REV. A. M. KNAPP.

Before the Rev. A. M. Knapp left Japan for Europe, whether he was ordered by his physicians to proceed, a farewell dinner was given to him in the Imperial Hotel, Tokyo, by a large number of friends interested either in his cause or in himself. The chair was taken by Mr. Kaneko, Chief Secretary of the House of Peers, and the vice-chair by Mr. Kato Satori, one of the most zealous Japanese supporters of Unitarianism. Some forty gentlemen were present, among them being noblemen, officials, missionaries and journalists. H.E. Mr. Kuki, formerly Japanese Representative in Washington, and now Director-General of the Imperial Museum, proposed Mr. Knapp's health in eloquent language. Mr. Kuki dwelt much on the conspicuously close character of the relations that have always existed between America and Japan, and on the necessity of still further extending and cementing those relations. He said that, during all these years, from the coming of Commodore Perry until the present day, no cloud had crossed the horizon of the two nations' friendship, except indeed the Shimono-seki affair, and that, by America's sense of justice, had been converted into an additional link of unity. He declared that, apart from the benefits conferred on Japan by the presence here of men like Mr. Knapp, such visitors were also of incalculable value in bringing the two peoples into closer contact, for Mr. Knapp, returning to America, would be able to tell his countrymen what the Japanese really are, and by what sentiments they are animated towards the children of the Great Republic beyond the water. He expressed deep regret that broken health should be the cause of Mr. Knapp's departure, but he pointed out that even from this they might derive some comfort since there were the best hopes of Mr. Knapp's speedy recovery and consequently of his return to his numerous friends in Japan.

Mr. KANEKO added a few hearty and well chosen words to this speech, and then called upon the guest of the evening.

The Rev. A. M. KNAPP, who spoke as follows:—I need hardly say with what pleasure I respond to your kindly words of greeting and farewell, especially as this occasion is to me the climax of the hospitalities and kindnesses which have been shown me since I landed in your country. But in this world and as we Unitarians believe, in all worlds, here and hereafter, there is no enjoyment without its alloy, no unmixed pleasure, and to me the pain comes with the thought that this climax is also the end of what has been to me an entrancing dream. As you have doubtless often been told, an extended sojourn in Japan is indeed for foreigners a dream from which it is painful to awake. The atmosphere of restfulness, the refinement which one finds here make it a real pain

to contemplate a return to the mad hurry and worry and selfish competition of the Western world. There is one regard, however, in which my stay among you cannot be likened to a dream. Dreams and all their incidents we soon and inevitably forget. I can never forget the kindnesses with which my three years' stay among you has been marked. And now, as we Unitarians are all thorough optimists, I want to take this occasion to dwell upon some of the encouraging features of the errand which brought Unitarianism to this country. Were it an isolated errand, or were we here simply as representatives of a small sect of Christendom; did we come here to make converts in the usual way associated with religious movements, there would be perhaps little for me to say. Were we alone in this enterprise we would share the fate of all isolated movements and look forward to being left aside and forgotten. But what is it that we came here to teach as a general method of thought in religion? We came to suggest precisely the same method in that sphere which is now being used with such marvellous results in other departments of learning and of life. We have hosts of companions in this movement. What for example have our co-workers in other realms been doing and what have they achieved? They have been applying a certain method to their work. As a result we have what is called the "New Astronomy," the "New Chemistry," the "New Biology," &c. None of the truths of the old astronomy have been lost, but there has been in that science an immeasurable and helpful gain. So too with the new Christianity: nothing worth knowing has been lost while floods of useful knowledge have been poured forth for the benefit of mankind. Now, precisely the same method the Unitarians would apply to the science of theology, and to the help of religious thought and life. Openly and unreservedly, and without wasting time or thought in the hopeless endeavour to reconcile the new ideas with ancient scriptures, that is, with the record of what men once imagined in regard to the universe and God, we believe in and abide by the results of the new theology and the new criticism, and seek to apply them to the conditions of our wonderfully new life in this present age. Therefore we are not isolated workers. We have the enormous encouragement which comes from the consciousness of having helpers in every realm of thought and activity. Again it is very encouraging to feel that we are not engaged in the hopeless attempt to struggle against the tide of God as specially manifested in all the movements of the time. The whole drift of human thought is with us. There is scarcely any instrumentality now moulding public opinion which is not in practical sympathy with us. Almost without exception, they all take for granted, they all assume, as the basis upon which they work, the essential principles of Unitarianism, which I define to be, in general terms, the supremacy of reason, the sanity of the universe and the essential soundness of human nature. Take the great newspapers of the world, the entire unsectarian press, and you will note that the basis of their discussions, the point of view they assume, is in entire accord with these principles and with all they logically involve. So too with the leading reviews and periodicals. Not only their drift but the whole atmosphere of their thought is permeated with these ideas. They do not discuss them to any great extent. They take them for granted. Or read the great poets and novelists of our day. The staple of their works is the idea of the essential soundness of human nature, and the sanity of the universe, excluding the very conception of miracle in the old theological sense. Take the great movements for moral reform. They also are based not upon the idea that man is essentially corrupt, hated by God, and needing special or artificial conversion, but they are based upon the idea that he is essentially improvable, and they go to work to improve him by training and education, by surrounding him with helpful influences. And so too in the realm of religion itself, the Churches which still cling outwardly to the old creeds and forms, are gradually but surely dropping out from their real thought the distinctive features of a bygone age—and are coming to stand upon the basis of the supremacy of reason, the sanity of the universe and the essential soundness of human nature. Therefore I say that Unitarianism here as everywhere has every encouragement. It is with the tide and is not trying to struggle against what is so manifestly a great world movement. Whether it succeeds as a denomination, is a matter of little moment, compared with the conviction that what it has at heart is, or is coming to be, the real heart and life and the practical religion of mankind. But it is not enough to merely drift with the stream. It is possible for every man to send the boat ahead of the current and gain time in this movement which

is winning happiness and peace for humanity. Horace Mann, the great American educator, on being rebuked for his impatience in carrying out his plans for reform, and told that God always had patience, replied: "Yes, but God has plenty of time, and I haven't." Something of that spirit ought to animate everyone of us who has the interests of humanity at heart. With that spirit we could not be content simply to float with the stream, but put forth our efforts in the consciousness that we are co-workers with God, and essential for the carrying out of the divine plans for the world. It is with the encouraging hope that there are now some at least among you who are animated with this spirit in regard to the religious future of your beautiful land, and of the part you may share in it, and the work you may do for it to carry it forward in the great tide movement of human thought, that I bid you farewell, thanking you for your great kindness, and asking only that that kindness may be vouchsafed in as abundant a measure to my successor, Mr. MacCauley, and his co-workers, who will, I know, be with you in heartiest sympathy in your effort to give your land the blessings of a genuine, practical, and reasonable religion.

Mr. ARAKAWA, Japanese editor of the *Unitarian Magazine*, said:—Mr. President, Mr. Knapp, and gentlemen, I wish to speak a little in behalf of the *Unitarian*, a magazine which I represent here for the Japanese side of its editorial staff. When the first glimpse of Unitarianism touched our intelligent minds three years ago through the active efforts of a gentleman who is our guest to-night, it was soon recognized by them as a rational and scientific principle, as well as an appropriate means for the promotion of our religious, social and ethical education, and since then it has been the recipient of our strong sympathy. Unitarianism has brought with it here a sense of the true universal brotherhood of mankind. It has come here not to disorganize or root out any institution and custom of the land. It works positively as a religion, as a social force, and as an ethical force. It has come here as a friend of reason and science. In it, methinks, there is no boundary, there is no race. Where there is reason and science, there Unitarianism offers its hearty hand shake. Such being apparently the motives and acts of the first Unitarian representative here, and such being seemingly what constitutes Unitarianism, it would not be at all surprising that the Unitarian principle soon found here many a friend in the various actions of the people and in the various circles of occupation. In the midst of such a state of things our *Unitarian* appeared. It is but nine months since it first announced itself to our community at large as the organ of Unitarianism in this Empire. Scarcely in our recent religious history has any religious paper earned such a wide reputation and made such a success as this, our *Unitarian*, in such a short space of time. In spite of the most unfavourable circumstances under which it appeared; in spite of the political stir and political crazes that have diverted so many a young man from his ordinary vocation, aye, even from his school life, and plunged and drowned him in the political floods, which consequently caused the suspension of many papers and magazines of science and literature, especially of religion, our *Unitarian* has remained undisturbed and unaffected in its popular interest. Its reading circle shows itself enlarged day by day. Not only that; in spite of the jealousy and interruptions of Orthodox Christians, our *Unitarian* has found itself animated by the constant and enthusiastic contributions of some reputed Buddhists, and a few able and broad-viewed converts from among our native Orthodox Christians. Our *Unitarian* has maintained its own peculiar colour, which distinguishes it from those popular and unsubstantial papers that resort to various means simply to win the popular favour and to increase their subscription list. The fact that it has kept its distinct characteristics and followed its own standard has so much gained for it the sympathy of some of our best men. It has therefore good prospects in its future career. To what do we ascribe the success that our magazine has attained so far, despite some difficulties through which it has made its way? Firstly, to the nature of Unitarianism itself. Secondly, to the persistent and enthusiastic efforts of that gentleman who first carried here the standard of Unitarianism—the Rev. Arthur May Knapp. Now I am sorry to find that we are compelled to part with him, although we do not wish to do so. Nay, all his friends surely take share with me in my sorrow. Mr. Knapp, while we entertain sincere hopes for your recovery to health and while we know that you will leave us, physically, we wish and trust that you will not feel that you are going away from us mentally. I hope your departure is merely a physical one, and that your thought may remain here and live with us for ever and ever.

May I trouble you to say a few words to our American brethren, especially to the members of the American Unitarian Association, saying that we all appreciate their kind feelings toward us and that we return them with similar affection, and that though the Western Republic and the Eastern Empire are divided by the great Pacific, yet our mutually friendly sentiments are not and can not be separated by any space even of a hair's breadth, and lastly that we hope to co-operate with them for the universal distribution of our rational and scientific principles and for the delivery of many pitiful souls from the dungeons of dogmas and from the bondage of sophisticated principles. Now, farewell to Mr. Knapp, and may he reach his destination with safety amid the cheers and salutations of his waiting friends.

The Rev. W. SPINKER, representing the German Evangelical Protestant Missionary Society, spoke in German, which was translated by the Rev. Clay MacCauley. He said:—"Being at this moment asked to say a few words, I trust you will excuse me, Mr. President and gentlemen, if I add a third language to the two we have already heard. I sincerely regret that illness is the cause of Mr. Knapp's departure. My best wishes accompany him. Whenever I see a foreign representative of Christianity leave these shores, I always think of the day for which I have been longing since I first arrived in Japan, the day when, the necessity for our presence having disappeared, the last of us will have turned his face Westward; the day when Christianity shall have taken such deep root in Japan as to require no further culture from foreign hands. Usually it is not gratifying to find oneself superfluous, yet I am persuaded that all my colleagues will echo my hearty wish to be very soon superfluous in Japan. Mr. Knapp mentioned the optimism of Unitarianism. He has a right to feel optimistic, for he knows that, though obliged to leave Japan himself, his work will not leave with him. It has found too many friends and supporters here. Unitarianism, Universalism, Liberalism and all the "isms"—I acknowledge their historical *raison d'être*, but I am sorry that any reason for their existence should still be present. What I want for Japan is what, with all our "isms," we each and all really contemplate, the simple, original gospel of Christ; the heart of Christ, may I say, with its freedom and its profundity. There we stand on common ground, and when we have given that gift to this noble nation, we can easily dispense with all our later historical traditions. Mr. Knapp spoke of a dream which fascinated his senses in this wonderful land. May I be allowed to supplement his remark by my last wish for his future, that God may permit him to see the realization of his dream in a higher form—Japan a country of solid Christianity, free and pious, but above all, pious (*frei und fromm—aber fromm*).

The Rev. CLAY MACCAULEY, who succeeds Mr. Knapp in the direction of the Unitarian Mission, then spoke as follows:—Mr. Chairman this card just handed to me asks for my speech. I have no speech; I did not expect to be able to be with you during your speech making, and I am not prepared. Besides, having known your guest well for twenty years possibly, I am not sure that I have anything special to say now. I will however say this:—I have almost been tempted to think that Mr. Knapp, in going away from Japan, is settling up an old score of ours, which I had well-nigh forgotten. Fifteen years ago Mr. Knapp called upon me so often to occupy his pulpit, during a long stay which I made in the town where he was a settled clergyman, that he actually transformed my name, Clay MacCauley, into "Clay my Colleague." Just when this kind of arrangement was in full swing I left him for a distant place. Is he about to balance up things now? Mr. Chairman, fifteen years should bring oblivion of some matters. But seriously, Mr. Chairman, Mr. Knapp, and I have worked a good deal together as Unitarian ministers; as colleagues in Japan we have been brought into exceptionally intimate relations. I very much regret my friend's departure for home. I regret it the more because of the reason which makes it advisable. Yet I am confident that the going is not on account of actual illness, but is by way of precaution against serious trouble. All good fortune go with him. May he soon enjoy the abundant health of the past. As Mr. Knapp goes, however, I am forced to think much about our work and of those who remain. Upon me devolves full responsibility for the future course of the work we have been doing together, and I can not now forbear asking you who have had Mr. Knapp's counsel and guidance to give me the same confidence and help you have been giving him. The Unitarian work here will not cease because Mr. Knapp goes; nor will it be materially changed because he goes. He and I have strongly sympathetic faiths; a common belief in One Source,

Life and Lord of the Universe; a common discipleship to Jesus Christ, the prophet of the Fatherhood of God and the divine childship of Man; and a common devotion to the ideal of the Brotherhood of Humanity which has been, through Christianity, the great impulse to the world's progress. For the service of these principles we came to Japan, and for their wide acceptance we, with our friend Mr. Hawkes of England and the other labourers for national Christianity who sit with us this evening, have done what lay in our power. These principles will still direct the Unitarian work. Another word permit me, Mr. Chairman. I hope that the people of Japan will welcome and accept the message we bring to them. Some one has spoken of the possibility of the Japanese regarding the mission of foreign religions to Japan as an "impertinence." How can the message we bring be justly looked at as an impertinence? The Brotherhood of mankind is one of our fundamental principles. All men, individuals and communities, are members one of another. It is no impertinence that we act upon the certain fact that human welfare is the result in large measure of reciprocal services among individuals and nations. Occidental peoples have been givers and receivers all around. Christianity itself started from Asia and reached England, Germany and America, through Greece and Rome, and through many centuries of change. Buddhism was once as foreign to Japan as Christianity ever was to the West or is to this country now. There is no race or national proprietorship in these things. Christianity belongs to man, and comes to Japan just because the Japanese are men, born of the same Father, encompassed by the same duties and bound up in a like destiny with the mankind of the world. We are not expecting or asking for too much, then, in commending our religion to the people of this country. Our Unitarian mission is justified by our conviction that human happiness and prosperity can be reached only when all men shall become related to one another, by such a faith and life as that which follows a true consciousness of the nominal Fatherhood of God and the Brotherhood of man.

Captain BRINKLEY, being called on to speak for the Press, said:—"Mr. President and Gentlemen. This sudden demand places me in the position of the unfortunate boy Tomkins. I don't know whether you have heard of the boy Tomkins, but his story is familiar in English School annals. Not over-gifted with ability, but thoroughly studious, he stood at the head of this class, much to the chagrin of Jenkins, the second boy, who, though far cleverer than Tomkins, did not love work. Jenkins, watching Tomkins closely, observed that whenever a question was put to him, he began to fiddle with the button of this waistcoat. One fateful morning, just before the term examination commenced, Jenkins managed to cut off that button, and when Tomkins' hand strayed down to find it and found it not, his wits forsook him, and he failed in his examination. An editor's pen is to him what the waistcoat button was to Tomkins. The touch of his pen brings him ideas and inspiration; separate him from his pen and his mind becomes a blank. So I find no words apt or appropriate to respond to Mr. Kaneko's appeal. And I am the more reduced to silence when I consider the cause of our meeting to-night. I have not known Mr. Knapp very long, nor have my opportunities of cultivating his acquaintance been numerous, but nevertheless his bright geniality and straightforward earnestness have made me regard him with exceptional feelings of friendship, and my regret at having to say goodbye to him is correspondingly keen. I am entering my twenty-fourth year of residence in Japan. During that lengthy interval I have witnessed many wonderful and history-making changes, so many that I almost fail to realize them. Yet, looking back at the long vista, the impression that seems to come to me most vividly, is an impression of Nature's unequal justice; a feeling that in her direction of moral affairs she does not always show that delicate sense of adjustment so perceptible in her physical works. Friendship is a conspicuous example of her failure. A plant of slow growth, friendship rises from the soil of acquaintance timidly and leisurely. Yet how often just when it has become tall enough to be clasped to our heart, how often do circumstances tear it from its place and leave to us only a memory of its existence. The time that we are allowed to enjoy it in its maturity bears no reasonable proportion to the period of its tardy and difficult growth. This is what I seem to have been chiefly learning through all these years. I see behind me only a long record of friendships suddenly broken by partings. To-night adds another to the list. Yet I hope and believe that we shall soon see Mr. Knapp among us again, fully restored to health and

able to resume the excellent work he has begun in Japan. And I trust that on his return he will find such a welcome as he would desire. Not a welcome in the ordinary sense of the word, for assuredly we shall all receive him with open arms, but the welcome conveyed by the discovery that Japan knows how to conserve as well as to adopt. He leaves at a critical moment. During his absence the Diet will have met and parted—met and parted, I am convinced, amicably, pleasantly and moderately. Perhaps, too, some of the changes embodied in the wonderful political platforms enunciated during the past twelve months, the platforms of the *Kaishin-to*, the *Rikken Fiyn to*, the *Hoshu-to* and all the other "to's"—perhaps some of these changes may have become accomplished facts. But through it all we trust that Japan will remain Japan; that while borrowing and assimilating the best features of Occidental civilization, she will show herself capable of preserving the beauties of her own. To prove that such had been the case would be the best welcome she could offer to Mr. Knapp. I trust that such a welcome awaits him, and that he will speedily return to receive it.

Rev. Dr. PERINS said:—Mr. Chairman, in Mr. Knapp's response he has spoken of his mingled feelings of pain and pleasure. I am sure we must all testify to similar feelings at this farewell meeting. It is with sincere regret that I contemplate his leaving these delightful scenes. He was the first man I met in Japan whom I had ever heard of before. In the work of finding a home and settling his counsel was very valuable. He has been a good neighbour, a good man to live beside. It a real comfort to have some one near us who knew so much more about the country and the people than I knew. But there is another side to this picture. From one point of view it ought to be regarded as a very auspicious occasion. We have here this evening the representatives of three liberal Christian movements in Japan, the Unitarians, German Evangelicals and Universalists; with shades of difference they represent the great liberal movement in religion. We ought to be very grateful I think, for the substantial work done in this country by the conservative Churches; but at the same time we ought to rejoice at the strong front which liberal Christianity is able to present as represented here this evening. The orthodox Churches have done a noble work, but I am convinced that we have for the people of Japan a somewhat sweeter and nobler message. One curious thing to me about this meeting is that already speeches have been delivered in three different languages. Is not this prophetic of the spirit and purpose of our liberal Christian work. The Fatherhood of God, the brotherhood and unity of man we make central in all our teaching. While the time may come after a few years when the Japanese people can conduct their own Christian teaching more wisely than any foreigner can do, there is after all a fitness in our co-operation. We all belong to one family; we have common hopes and aims, common thoughts and sorrows. We are members of one great brotherhood. Our interests are in common, our general needs are the same. By this fellowship and mutual co-operation the bonds of brotherhood grow stronger, our sympathy grows more tender and our friendship deeper. As Dr. Spinner has already said, what this country needs is the spirit of Christ. But that is what all countries need, and the essence of this is the spirit of brotherhood. Let us hope therefore that in the friendships he has formed as well as the lessons he has taught Mr. Knapp has done much to commend this spirit to the people of this land. Then if our hopes are justified this delightful sojourn of three years in the land of flowers which he has spoken of as a dream will not have been all a dream.

Mr. SHIGA, editor of the *Nippon-jin*, said:—Mr. Chairman and gentlemen, I should perhaps address you in my own vernacular, but, as the Rev. Mr. Perins has mentioned already, three languages are represented here, so I have thought that I might as well add a fourth, and I speak to you in the Japanese English or Nationalized Anglo-Saxon idiom. About the time that Mr. Knapp arrived in this country, his arrival having created a good deal of stir in the capital, Mr. Masujima wrote to me asking me to attend at the Hoshigakka Teahouse, where he intended to entertain Mr. Knapp. I went and listened to Mr. Knapp's speech on that occasion, and his remarks awakened my sympathy. Some days after Mr. Knapp communicated to me in writing the subject of his speech, in the course of which he said the Unitarians believe in the preservation of individuality. I thought then, and I adhere to the opinion, that individuality in the aggregate is nationality; that nationality is the principle for which we as a nation should strive; that Japan can never be great till she has freed

herself from the fetters imposed by the spirit of imitation. I found that in this respect, therefore, Unitarianism holds views similar to my own, and for this reason, though not a believer, I sympathise with it. A year or two after his arrival here Mr. Knapp published a journal called the *Unitarian*, to which, I remember, I contributed two essays. In one of those papers I wrote that during my cruises in the South Seas among the various islands, Fiji, Samoa, and the rest, I saw many Englishmen living in peace and prosperity among savages who ten or twenty years before were eating human flesh. Well, why cannot they live under our jurisdiction? I had written this essay about the time the so-called Anti-Treaty Revision Meeting was held in Yokohama, an essay greatly radical in character, and yet Mr. Knapp's journal was magnanimous enough, generous enough, and liberal enough, to publish it. That is the second reason why I sympathise with Unitarianism although not a believer in it. I regret sincerely that Mr. Knapp is about to leave us. But Mr. Kaneko has extolled the balmy air of France, and so I suppose Mr. Knapp must go, and I can only heartily hope that he will be able soon to revisit this country in good health.

Mr. LISCOMB said:—Mr. Kaneko and gentlemen, like the others who have already spoken, I am most happy to participate in these festivities of greeting, though exceedingly sorry that it should be necessary to make them the greeting of farewell. Yet, while sharing in your common sentiments of regret, my own feelings this evening are peculiar. For I cannot forget that it is to Mr. Knapp that I owe my introduction to this beautiful land, which has become to me in many ways an object of intense interest and delight. You, moreover, have met him in the occasional pleasures of social intercourse; but some of us have been intimately associated with him in weekly and almost daily duties and friendly converse, and in it all have experienced that inexhaustible flow of cordial and genial feeling, that never-failing courtesy and gentlemanly bearing which you who are acquainted with him know so well. And I want to take this opportunity to assure him that we in whom he has shown his confidence by inviting us to participate not only in the labour he has had in charge, but in the important work of education here, and in what I believe is destined to be a great university, a radiating centre of potent influence in your national life, shall do all in our power to justify that confidence and to realize the hopes that he has placed in us. But often in the future I fear that, like the boy of whom Captain Brinkley has spoken, we shall feel our hands go down to seek the familiar button on which we have so often relied, and shall find there only vacancy instead. But this we know, that the bond of friendship is not severed by partings such as this. It still lives, and lives the same; it throbs beneath oceans; it travels over mountains; it pierces forests; it tracks its way through pathless deserts; it will go with him where he is to go, and it will abide with him wherever he may abide. Mr. Knapp leaves Japan at a most interesting moment. In a few days will be realized that consummation for which the nation has long waited in eager anticipation—the opening of the new Japanese Parliament. Year by year the wonderful process of development has been going on. Step after step has been taken, each one leading farther and farther from the dead past, and bringing the nation nearer and nearer to a full participation in the great world life of modern times, till now this land, once the most exclusive and conservative on earth, is to realize the blessing of constitutional government, and to take its place in the sisterhood of enlightened and progressive States. It is a time of apprehension in the minds of many. Men are filled with uncertainty as to the future. Some hope for little, and others despondingly look for failure and disaster. For myself, I have no fear of the result. The character of the Japanese people fills me with hope and trust. Again and again they have reached out to other nations and have borrowed from them for their own needs. Now it has been art, now science, now customs, institutions, and laws, and in their hands each of these has been transformed and adapted to their uses, and has received a development that has made it something essentially new and unique—a native product, marked with the stamp of their own genius. No people on earth have shown a greater ability to receive and to assimilate whatever at a given time was needed in their life and civilization. It is in this great assimilating power that I now rest my hope for the future; and I steadfastly believe that it will enable the Japanese people to take what is valuable to them in the civilization and political methods of the West, to transform these things and adapt them thoroughly to their own requirements, and to build up from them a solid and enduring

structure of national polity that will inure to the higher welfare and happiness of the teeming millions of this fair land. If they fail in this great experiment, I shall be profoundly disappointed; but it is a disappointment that I have no apprehension feeling. I was greatly interested in the broad views of human friendship and brotherhood expressed by His excellency, Mr. Kuki, as translated for us in that peculiarly felicitous manner which we are accustomed to hear from the lips of Captain Brinkley. It shows us, in the most striking way, how strongly the modern world spirit has taken hold on the minds of the Japanese people, and how hopelessly dead is that old spirit of exclusiveness, which shut the doors and drew about them the wall of the sea, and saw nothing beyond the watery horizon that encircles their island empire. But elsewhere, also, in former times the common conception of mankind was of so many separate nations, existing as disintegrated units and having no more cohesion than the same number of marbles in a bag. That conception, in the minds of the highest thinkers, has now passed away. The unit is no longer the nation; it is humanity, and of this each nation forms but a part, is a member of the wide brotherhood of mankind, sharing the same progress, taking part in the same vast movements, participating in the same hopes, enlightened by all and enlightening all, and responding to the electric thrill of truth that vibrates in the thought of countless millions. Into this great bond of friendship Japan has now entered; in this stupendous movement she has taken her place. She has seen the light. Her people have caught the gleam of the brighter coming day. They will not turn back; and though our friend leaves us at so interesting an hour, he will learn the tidings in that Western land, and they will, I am convinced, be tidings of prosperity and success. As for him, I believe that, much as he loves Japan, he can serve her even better there than here; for every friend of her people who returns to his Occidental home cements more strongly the friendship existing between the East and the West, and promotes a better understanding between the two peoples. I know that there his lips will never be closed nor his tongue be silent when he can use them in the service of Japan; and from him, I believe, will radiate an influence that will be of even greater benefit to her than he had hoped to accomplish upon her own shores. To him I can but say:—

Across the sea, across the sea,
Where winds and waves are sweeping free,
We bid godspeed to thee and thee;
Our hearts, our thoughts, where'er thou be,
Shall follow and abide with thee.

Mr. KATO said:—Mr. Knapp and Gentlemen, I have been permitted the honour of saying a few words at this gathering held to commemorate the departure of Mr. Knapp from Japan—an occasion which is not only to be regretted on account of the whole religious life of Japan, but is disheartening to me on my own account. His departure may not be said seriously to damage the cause of the Unitarian sect in this country, but when I think that I have lately parted from about thirty thousand of my friends, and enlisted myself in the new movement, I cannot help grieving to see one of my seniors leave so soon. Those who are of the same way of thinking with me will admit that whether Mr. Knapp is present or absent will not in any way affect the future state of religious affairs in this country, but all the same we are inexpressibly disheartened. It is only because I believe in the existence of a more powerful Being than Mr. Knapp, or any of us, that I can comfort myself. Looking back on the circumstances attending Mr. Knapp's stay in Japan, I find that since the time of Francis Xavier no one was ever so much attended by praise and censure by fortune and misfortune as Mr. Knapp. Xavier arrived at Kagoshima in May, 1549, and after persuading and converting the Daimyos of Kiushiu to his doctrine, he came up to Kyoto, where he received unusually good treatment and succeeded in winning popularity and gaining a remarkable influence. Mr. Knapp, since his arrival in this country, has been received with pleasure by the higher classes; at this very moment, there sits a Marquis on each side of his chair, while such distinguished personages as Viscount Kuki, the former Representative of Japan in the United States of America, and others are present. There are many persons who still hesitate to join the Unitarian movement openly, but follow the doctrines brought to them by Mr. Knapp, and when once our spring arrives those followers of our doctrine, who are now as it were in bud, will burst into blossom by the thousand. As remarked by Viscount Kuki, during Mr. Knapp's stay in this country our national affairs were so absorbing that we could not devote much of our attention to religious affairs, and yet he has succeeded even in such disturbed times in gaining our notice. I can

think of no one of the hundreds of missionaries I have known for years so much respected and trusted by the members of our educated classes as is Mr. Knapp. Our guest has essayed to accomplish in a few years what took Xavier his lifetime. However, in spite of his popularity, Mr. Knapp was placed in perhaps the most unfortunate position that had ever been assumed by a missionary. The missionaries that come over to this country from abroad of both sexes amount to nearly seven hundred, and these numerous apostles of the white race, though they usually greet any newly arrived fellow-worker with good and kind feelings, were antagonistic to the doctrines held by Mr. Knapp, and often engaged in attacking him and his principles, turning the columns of the *Japan Mail* into a literary battlefield. I have not become a Unitarian through his direct tuition, but I admire the great career he achieved in persuading our educated classes to become religious by means of his exposition of important religious principles relating to the existence of God, the relations of brotherhood among human beings, the immortality of the soul, &c. It is indeed to be regretted that those who are antagonistic to him are not Japanese but foreigners. It is needless to say that I am filled with feelings of sorrow in wishing him farewell, but I will cure my disappointment by thinking that Mr. Knapp will, as stated by Mr. Liscomb, be able to announce on his return to America that the great work in Japan is promising. I trust that he will not forget Japan though he goes away, and that he will do all he can for his brethren here in just the same spirit as if he were staying in Japan. Though I have faith that Mr. Knapp's being here in Japan or not cannot have any permanent effect on the progress of our common work, I have a strong hope that he will find means of working for us in his own country.

VICTORIA PUBLIC SCHOOL.

The presentation of prizes, certificates, &c., to the pupils of the Victoria Public School took place on Tuesday afternoon at the School. Among these present were Right Rev. Bishop Bickersteth, Messrs. G. H. Allcock, W. B. Walter, P. E. F. Stone, J. T. Griffin, Rev. E. Booth, Mr. W. T. Austen, and a number of ladies.

Mr. W. B. Walter took the chair, and was supported by Bishop Bickersteth, Mr. P. E. F. Stone (Hon. Treasurer), and Mr. C. H. Hinton, Head Master.

The CHAIRMAN said he was pleased at the close of the term to hear from Mr. Hinton that the boys of the school had made satisfactory progress during the past three months. He learned with regret that the total number of boys had not been wholly sustained. The boys in attendance during the last quarter had numbered forty-four, of whom six had been boarders. Mr. Hinton informed him that one feature during the past term was that Mrs. Hinton had been able to devote her time entirely to the younger boys, a special room having been fitted up for them and her whole attention devoted to them. The study of Greek during the quarter had been abandoned, as no boys offered for that class. A majority of the boys were learning French, and there had been a small Latin class of six boys which he believed was progressing satisfactorily. As far as regarded the amusements of the term there had been several cricket matches with the crews of ships in the harbour, but as no other school of boys of sufficient size existed in the place they had not been able to play any school matches. There had also been several conjuring performances during the term, and the athletic sports which took place on December 1st were well attended. He must again revert with regret to the small number of boys who had been able to attend, which made it extremely difficult for the members of the Committee to maintain a balance between the receipts and the expenditure. They could only hope, however, that as the younger boys of the place grew up the numbers attending the school might again increase, and so bring it up to the level necessary to meet the expenses which they had to defray in order to make the school thoroughly efficient. If the number of boys should remain at only from 45, as at present, to 50, it would be necessary for the Committee to consider some alteration in the arrangements. However, they hoped that would not be necessary and that the number of boys would again increase. He was glad to hear from Mr. Hinton that Scheuten, one of the boys who left the school, and was now in business, was giving every satisfaction, and he hoped that the other boys now coming forward would find in Yokohama an active and successful career, and thus be a credit to their education at the Victoria Public School.—(Applause.)

Mr. HINTON, before reading the lists, said the

results of the term's work had been very interesting to him as regarded the upper boys. Those at the head had kept at the head and had really done very satisfactory work—indeed the same thing had been noticeable all through the first and second classes. Of course the boys at the top of the school were somewhat removed in age and acquirements from the others, but he had been obliged to give them all the same papers, which was rather hard on the younger boys, though they still made a good fight. The work in the lower classes was also very interesting; he found boys in the fourth class at the beginning of the term who had gone right through the class, and ought really to be in the third class, but as there was no changing of classes in that way during the term they must wait for promotion till the next quarter. He explained that at the end of this term it was usual to give only certificates, the prizes being extra rewards, provided by the kindness of friends of the school, among whom he mentioned Mr. Kirkwood, who had given prizes for marks in natural history. The boys received marks, bearing the similitude of English money, and after they got their money they had to keep it and to keep also an account of it. Before they were allowed to compete for the prizes they must show their account books, and in that way perhaps the boys who had done best would not get prizes though they might have certificates, because they failed in the important branch of keeping what they got. Mr. Kirkwood wrote to express regret that he could not attend in consequence of the shortness of the notice, but with his usual kindness gave a prize for an examination in natural philosophy, which was won by Bonth in the preparatory class.—(Applause.)

It had been very interesting to see the various styles of the answers given by the boys to the examination questions, for it was interesting to a schoolmaster to see what the boys could do when they were put to it. In the geography papers, for instance, he found a plan that they had been pursuing this term give rise to various interesting answers. They had been taking a map of Yokohama and trying to realize what a map meant, the boys having calculated how far for example, they had to travel to get to school. This they did by using a simple mathematical method and they had also prepared a set of atlases which enabled them to tell how far certain places were from each other. He would be glad, speaking on this subject, if anyone present would ask the boys a question as to the distances between places which the pupils would be likely to know. If a boy were asked to find the distance between a place in France and another in Germany he would take the maps of France and of Germany and then by referring to a map of Europe could, on applying the mathematical method above spoken of, tell what the distance was. This improved the boys in the use of mathematics. Another plan had been tried this term which would give, he thought, good results, namely the use of mathematics in connection with history. The boys were required to take the campaigns of great generals of antiquity or of modern times and by using them as arithmetical exercises study the marches and the regions in which memorable campaigns of history had taken place. While this improved their powers of calculation, it enabled them to lay up a store of information which made both history and geography interesting. They had had contests on the cricket field—he supposed they were the best at football, since nobody would play them. They had had, as Mr. Walter said, an entertainment and a spelling-bee in which some of the boys who had now got prizes were very successful. He trusted they had also the usual and proper amount of serious and hard work, and he thanked the parents most cordially for the way in which they had helped him in that regard. A boy must learn self respect, to keep himself above mean temptations; he must get on with his neighbours, and he must be able to take his part in a crowd. He must learn that work was a duty which must be performed. Boys had many difficult tasks which they must do and which their master knew they could do, and it was a very great satisfaction to both master and boy when such a task was done. It was in helping the boys to put up with the disagreeable things which these duties entailed that parents were most helpful, and he had to thank them most cordially. In addition to Mr. Kirkwood's letter, he had a letter from Mr. Troup, regretting that he could not be present, and their thanks must be due as much to those who like Mr. Troup were absent as to those who had shown their interest by assembling there on that occasion. He trusted that next year they would be able to go on with success. Their success in numbers had perhaps not been great, but they must try and make up for it in some other way, and it was interesting to think that as the year closed on the Victoria Public School it still saw on the throne Queen Victoria in possession of good health,

her kindly light still shining on English hearts in all regions where the English tongue was spoken. He trusted that kindly light would find reflection in the future in many young hearts who had learned their first lessons within these walls. He concluded by thanking Mr. Fardell very heartily for his earnest work, and Mr. Takanashi, who had also given valuable assistance, and expressing his sense of the useful aid rendered by the older boys, who had performed the duties falling to them as seniors.

Bishop BICKERSTETH said he would like to mention that the very hard working secretary,—who had given them two years of hard work, often when he could not very well spare the time, and to whom they were specially indebted, as well as to Mr. Walter, who with him formed the working part of the Committee—Mr. Stone had told him that during the past year, though they had a smaller number of boys than at this time last year, they had on the whole done better than in the previous year. That was to say they more nearly covered their expenses than in the previous year. So far, that was satisfactory. When he addressed them six months ago he was able to tell them that during the preceding term they had quite covered their expenses. In a place like Yokohama, as they knew, which was a comparatively limited community, it was only possible to maintain a school which gave such an education as this, including Latin, French, mathematics, and a great variety of subjects, if practically everybody joined in supporting it. Many of the older boys as a matter of course went to England; of the younger boys they only obtained a fraction, and the school therefore appealed mainly to boys of middle age, say from about ten or eleven to fourteen. In a community like this of course there was only a limited number of boys of that age, and it was therefore of great importance that they should be gathered together in this school, if the school was to be able to maintain as high a standard of education as at present. He could not but hope that those who had the duty of providing for the education of their sons in Yokohama would bear in mind that it was only possible for them to have a first rate school in Yokohama by all joining in founding and maintaining one. Addressing the boys, the Rt. Rev. speaker said he was glad to find that though the exercise books were somewhat soiled at the beginning they improved towards the end, which he regarded as a highly satisfactory state of affairs. He was glad to learn that the school was keeping up its high character and trusted that they would always work with a good object before them.—(Applause.)

Mr. STONE proposed a cordial vote of thanks to Mrs. Hinton, whom Mr. Hinton had omitted from his expression of thanks.—(Applause.)

The CHAIRMAN said the Committee of the school were very much indebted to Mr. and Mrs. Hinton, Mr. Fardell, and Mr. Takanashi for their successful work during the past term, and it was with very deep regret that they learned that Mr. Stone was unable by pressure of other engagements to continue with them. He had done a great deal of good and hard service during the years he had been connected with the school. The Committee were therefore sorry to part with him. He was glad to say, however, that their old friend Mr. Wilkin, who was so well known in Yokohama, and whose experience in public matters was probably without parallel, had kindly consented to assist them in the coming term on the Committee. Before closing, the Committee would be very glad to hear what any one present might wish to say either to the boys or with regard to matters connected with or of interest to the school.

Mr. ALLCOCK proposed a vote of thanks to the Chairman and all those connected with the school to whom reference had already been made.—(Applause.)

The CHAIRMAN remarked that the Committee had been very greatly disappointed at times because they had not had, as they had hoped to have, occasionally from friends of the school communications that would arrest in its working. He might say at once that they would be only too pleased to receive from parents or friends any assistance that might be afforded. There were often matters which might escape the Committee simply from not having been brought before them, and they would always be glad to hear the views of any one on subjects connected with the school.—(Applause.)

This concluded the proceedings.

Following are the lists:—

EXAMINATION.

CLASS I.—Anderson, Allcock mi, Sale ma, Van der Heyden ma, Poole ma, Sargent, Braess ma.

CLASS II.—Wheeler mi, Wheeler ma, Pohl ma, Allcock ma, Drummond, Braess mi, Bird, Russell, Loomis, Mendelson, Poole mi, Deakin.

CLASS III.—Watt, Goddard, Van der Heyden mi, Kingdon, Chi Waag, Cooper, Yamaguchi, Arizumi.
CLASS IV.—Sasaki, Welsh, Ozawa, Sakamoto, Pohl mi, Siu Wing, Ah Ng.

PREPARATORY CLASS.—Kuhn, Booth, Russell mi, Sale mi (absent), Van der Heyden mi.

CERTIFICATES AND PRIZES.

CLASS I.—Anderson—1st Term's work, 1st Examination, certificate and prize; Allcock mi—2nd Term's work, 2nd Examination, Certificate and prize; Poole ma—3rd Term's work prize.

CLASS II.—Pohl ma—1st Term's work, certificate and prize; Allcock ma—2nd Term's work, certificate and prize; Wheeler mi—1st Examination, certificate; Wheeler ma—2nd Examination, certificate.

CLASS III.—Watt—1st Term's work and examination, certificate and prize; Van der Heyden mi—2nd Term's work, certificate and prize; Goddard—2nd Examination, certificate.

CLASS IV.—Sasaki—1st Term's work, and Examination, Certificate and prize; Sakamoto—2nd Term's work, Certificate; Welsh—2nd Examination, Certificate.

PREPARATORY CLASS.—Kuhn—1st Examination, Prize; Russell mi.—Improvement prize: Booth—Mr. Kirkwood's Natural History Prize.

CORRESPONDENCE.

THE RECENT FIRE IN THE SETTLEMENT.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—May I be permitted to direct the attention of your readers to the circumstances of Wm. Wilkinson, whose house was the last to go during the recent fire in the Settlement. Wilkinson has been in Yokohama some 15 years or more, and from inquiries I have made I find he bears a most excellent character. He has been casually employed as freight clerk, stevedore, &c., but now has no employment whatever, so that he needs employment as well as present aid. Several prominent gentlemen have contributed to the small fund I am raising for him, but I am not privileged to mention their names. One gentleman, however, says he has "known Mr. Wilkinson for many years and while he is the last to beg, his infirmities and age render it at present impossible for him to refuse aid if offered. Mr. W. is in many respects a man of most estimable character."

In consequence of the fire, which occurred at night, Wilkinson has lost all he possessed. I shall be glad to hand him any contributions which may be intrusted to me.

Yours truly, FRANCIS STANILAND,
Yokohama, December 22nd, 1890.

LETTER FROM SHIMANE.

(FROM OUR CORRESPONDENT.)

Matsue, December 5th, 1890.

November in Matsue was a month marked by several events of special interest. First of all, the celebration of His Majesty the Emperor's birthday was a festival unique of its kind. Nowhere else in Japan is the day celebrated as in Izumo. The celebration took the form of a great Shinto holiday. Shinto shrines, many of extraordinary richness and beauty, were publicly displayed in the principal business-houses of the city, while other shrines were carried through the streets by troops of men, moving at a run, with shouts of "Chōsaiya! Chōsaiya!" I have been told this ancient cry originated centuries ago in Kyōto, when a great building was being built; and the workmen were ordered, in order to time their unanimous efforts at pulling or lifting, to chant the name of the rich man who employed them. But to-day, the original word has been forgotten; and the cry of Chōsaiya has no significance except as a joyful shout, uttered only on these festival occasions by men, and at other times only by children at play. Besides these processions of the *miya*, there were drum-bands continually parading the streets. Each street in Matsue has its own drum,—and has had its own drum from very ancient times. The young boys of each street harness themselves to a sort of light cart, on which the drum is placed, and the young men of the street play upon it. In old times the drum of one street could not be taken into another without causing trouble; but now each drum-band can go wherever it pleases. There used to be fighting between the drum-bands in ancient times, not serious fighting, but fighting for fun on the festival called *Inoko Matsuri*. Customs have changed; there are no more mock-fights, and the old festival itself is no longer observed in the same fashion as of yore. But its date and its celebra-

tion have been transferred to the anniversary of the Emperor's birth, so that the latter festival has all the aspects of a Shinto holiday. The shouts of Chōsaiya are for His Majesty, also the beating of the drums, the masquerades, and the beautiful display of Shinto *miyas* in the shops and houses, before which men drink *sake* out of great red earthenware cups—the primitive *sake*-cups of Japan—to His Majesty's health. It seemed to me that there was something very appropriate and beautiful in thus making the Emperor's birthday coincident with a Shinto festival; for those now termed the ancient gods of Japan, the founders of the national life, deified and enshrined by a grateful posterity, were the fathers of the present beneficent ruler.

Nothing could be more beautiful in the way of loyal feeling than the reverential respect shown by Japanese boys to the Emperor's portrait, or to the mention of his name. Much as we may pride ourselves in England upon our loyalty, we cannot find similarly charming manifestations of the feeling among the young. It is only in mature life that the sentiment obtains its highest expression, when the reason and the meaning of social truths have become manifest. But among the Japanese youth, the sentiment is hereditary, natural—the transmitted feeling of generations in whom loyalty was cultivated as a religious sense. The graceful reverence manifested by a lad of ten or twelve before the picture of the Emperor is something not wholly of himself—something instinctively beautiful—the sum of ancestral impulses that belong to him in the same way that his father's features belong to him. It is something also which does not need to be cultivated: it was cultivated for him a thousand years before his birth; and the dead past comes to life again, not only in his instinctive gesture of devotion before a portrait, but likewise in the heart thought that prompts such gesture.

I saw many examples of this feeling on the occasion of the reading of the Emperor's recent letter on education in the great schools of Matsue. The reading of the letter by Governor Kotoda was a solemn but very pleasing ceremony. It was read in three great schools in succession. The students, —from children of five to men of twenty-four—were all assembled in the main halls of the schools; and upon a handsomely draped and decorated platform, the pictures of the Emperor and Empress were placed on a tapestried stand, adorned with flowers. The officials of the *ken*, civil and military, together with the teachers of the schools, took their places to the left and right of the platform; and all saluted the portraits,—walking in turn opposite to the stand, then bowing, then taking three paces forward and bowing still more profoundly, then taking three steps backward, bowing again, and retiring. After performing a similar ceremony, the Governor, in full uniform, ascended the platform, took the imperial letter from its case, lifted it reverentially to his forehead, unrolled it, and read it aloud in that peculiarly sonorous manner in which the Japanese read, or rather chant their own written tongue. Thereafter, a few brief explanatory speeches were made to the boys; and at a signal all voices burst out together in a most impressive intonation of the *Kimi-ga-ya*.

The next important event for Matsue was the opening of the Diet at Tokyo. It was celebrated as a great holiday. In the morning all the students assembled under their drill masters at the castle grounds, sang the national anthem, and fired military salutes. Some seven hundred gentlemen also gathered at Ninomaru, before the monument commemorating the names of those men of Izumo who fell fighting for the Emperor's cause in the South-western war; and drank the Emperor's health before this memorial of Izumo devotion. The Mayor, Mr. Fukunaka, made an eloquent speech; and after other ceremonies the festivities were concluded with daylight fire works and balloon ascensions. In the evening the city was illuminated with lanterns bearing the national symbolic crimson disk, the Red Sun of Japan; the city gave itself up to merriment; and until late in the morning the rhythmic booming of little drums, and the musical throbbing of *samisen* and *koto*, resounding all over the city, told how well the *geishas* of Matsue helped to celebrate the opening of the Diet.

An event which will soon rejoice Matsue will be the opening of the great new bridge over the River Ohashi, or Ohashigawa, an outlet of Lake Shinji. This river divides the city into two large districts. The old bridge, which for three hundred years spanned the Ohashi with countless feet,—something after the fashion of an enormous centipede,—certainly did credit to its builders, and withstood bravely the wear of time and change of seasons. Becoming at last dangerous, it was replaced by a more modern style of construction. There has been, however, some difficulty in making a solid foundation for

one group of posts, occupying a position in the deepest part of the stream. Here the bed of the Ohashigawa is extremely treacherous,—being chiefly an alluvial mud of great depth. The new pillars sank slightly under testing; and the completion of the bridge has been temporarily delayed. This incident recalled to some citizens a strange legend concerning the ancient bridge. It is averred that the builders of the older structure encountered the same difficulty centuries ago, and that it was vanquished only by burying a man under the foundation of the bridge. The man's name, according to tradition, was Gensuke; and one of the pillars was always called Gensuke-bashira.

The weather still alternates between warmth and cold. One day last week we had the temperature as low as 40°, and in the morning a few snowflakes. Still the present indications are that on this coast the winter will be late in coming. The only decidedly wintry-looking thing now visible is Dai-Sen, whose imposing summit became white in one night, less than a fortnight ago. Dai Sen has put on his winter costume, and once on, he seldom takes it off before the summer sets in.

LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, November 29th.

Since I last wrote, the Republican leaders have been busily engaged accounting for their defeat at the last election. The general drift of their explanations attributes the event to the misrepresentation of the tariff by evil Democrats. Senator Hoar of Massachusetts sees no ground for desponding. He says that the American people are wedded to the principle of protection, and that they will be true to their faith in 1892. Senator Edmunds of Vermont says that the defeat was caused by local disaffection, the Republicans having in many instances made nominations. Mr. Blaine lies back, with his thumbs in his armpits, and says:—"I told you so." The President is reported as quite serene. He is preparing to explain in his Message that the people voted against the Republicans because they love them, on the principle that those whom the Lord loveth he chasteneth. It is said that the Message will be full of neat conceits to prove that the avalanche prefigures a Republican tidal wave in 1892. The relations between Mr. Harrison and Mr. Blaine are understood to be strained; the intimates of the statesman from Maine allow it to be understood that his language in alluding to the President is "frequent, and painful and free."

Congress meets on Monday, and it is stated on the highest authority that whatever the Republican majority neglects, it will not fail to pass an apportionment law to adjust the proportionate representation of the States to the new census. Mr. Porter has finally announced that the aggregate population of the country is not 64,000,000, as he had originally stated, but something over 62,600,000. Nobody believes his return to be anything more than a guess; but such as it is, it will have to serve as a basis of legislation for the next ten years. It is understood that the dominant party proposes to raise the number of members of the House of Representatives from 335 to 350; this, with the increase of nearly 73,000,000 in population, will materially increase the number of the constituents of each member, so that it will probably be found that a member of the United States Congress represents more individuals than a member of any other legislative body in the world.

It is doubtful if any other measure, except the necessary appropriation bills, can become a law at the short session. An effort will be made by the friends of the shipping interest to pass the Postal Subsidy Bill, and fanatical Republicans will try to get a vote on the Force Bill; but the chances are against their success in both cases. The recent elections are calculated to induce the Republicans to pause, for fear of setting the Democrats an example which they might follow to the discomfort of the administration.

The air has been full of rumours of a new Indian War. This time it is the Arapahoes and Sioux, in the Dakotas and Wyoming, who are on the war path. They have been dancing their ghost dances which last from 20 to 24 hours without intermission, and are awaiting the coming of a Messiah, who is to exterminate the white men, and restore the supremacy of the red men all over the country. The Buffalo is to be revived on the prairies, and the railroad tracks are to be taken up in order to permit the growth of Buffalo Grass, as it flourished fifty years ago. These are the views of "White-gut," "Kicking-bear," "Young-man-afraid-of-his-

horses," "Yellow Hawk," "Short Bull," and other eminent Indian chiefs. General Miles, who commands the department, while not attaching implicit faith to the stories of frightened settlers, has made such disposition of his troops that a general exodus from the reservations would be quickly headed off, and at the present time, the danger of hostilities appears to be less than it was.

Wall street is quieter, though failures continue to occur, and confidence has not been restored. One source of the prevailing distrust is the feeling that the public finances are in the hands of a speculator who would not hesitate to use his power to lighten money, or the reverse, if there was any money to be made by the operation. Mr. Win-dom is well known in Wall-street, where he represented some rather peculiar schemes before he became a member of Mr. Harrison's political family.

Out of the panic have come two changes. The control of the Union Pacific Railroad system has passed out of the hands of the Boston stock-holders, and has been resumed by Jay Gould. And the proposition to unite all the great railroads west of the Mississippi Valley in one great consolidation has been revived. These roads are now working under a pooling arrangement, by which their through earnings are divided according to certain fixed proportions. The pool is conducted in defiance of law. While it lasts, it prevents rate cutting. But it is believed that its provisions are constantly violated. And there is no question but actual consolidation would lead to a curtailment of expenses, and would promote the efficiency of the service. A general railroad consolidation is one of the probabilities of the future, but it may be a long time in coming.

Meanwhile, one of the collateral features of the new deal is the restoration of George Gould, Jay Gould's son, to the Presidency of the Pacific Mail. Mr. C. P. Huntingdon is said to have acquiesced in the change; which may or may not be the case. The Pacific Mail, in the hands of an enemy of Huntingdon's, could play havoc with the business of the Southern Pacific Railroad. People think that Huntingdon was safer when he controlled both concerns.

Post-Master Wanamaker's annual report has been published in advance of its presentation to Congress. It shows aggregate receipts from postage amounting to \$60,858,783, and expenditures amounting to \$66,545,083; the deficit being \$5,786,700. It appears that there is a profit on the carriage of letters, but this is swallowed up by the loss on the transportation of unbound books, pamphlets, and "sample copies." The Post office spends \$8,000,000 a year in carrying the mail of the other Executive Departments. If they paid postage as individuals do, there would be a profit instead of a loss, as at present. Notwithstanding the deficit, the Post-Master inclines to the belief that the experiment of one cent postage might be tried. It will be remembered that the last change which was made was a regulation increasing the weight of letters carried for two cents from half an ounce to ounce. This alteration has been of no practical benefit, as few letters weigh over a half ounce. A reduction of postage from two cents to a cent would be much more sensibly felt. Mr. Wanamaker renews his recommendation that a telegraph department be made an adjunct to the Post Office, and he is also in favour of Post Savings Banks. Both of these improvements will probably be adopted in time.

Another report which has just seen the light is the annual statement of the comptroller of the currency. That document shows that the total number of national banks now doing business in the United States is 3,567, with a capital of \$659,782,865, issues amounting to \$179,755,645, deposits footing up \$2,043,502,067, and loans of \$1,970,022,687. The large number of active banks shows how popular the national banking system has become, and how kindly the American people take to the fashion of placing their money in bank. In this particular, they contrast, in a marked degree, with Europeans. The discount line shows a large increase over any previous return; it accounts in a measure for the money troubles in New York, and for the steady recurrence of failures among persons and concerns that are in debt. The country is prosperous enough to stand considerable bank expansion: but a discount line of nearly two thousand millions is a tremendous burden for any community to carry.

Professor Elliott of the Smithsonian Institute is out with a letter in which he says that the fur seal is being gradually exterminated on the Pribiloff Islands, or is being driven off. He declares that it will be impossible for the new lessees of the islands to get their covenanted 60,000 skins this coming year, and he advises that the islands be allowed to be fallow for at least seven years, in order to give the seals a chance to breed and mul-

tiply. If the professor is right, the question forces itself on the mind—what has become of the 7,000,000 seals—old males, bachelors, females and pups, which were reported as visiting St. Paul and St. George every season twenty years ago? We know precisely how many seals have been taken on the islands, and how many on the high seas en route to or from the rookeries; the catch has only been large enough to cause a healthy depletion of an overcrowded community. Have the others committed suicide is disgust, in order to spite mankind? Other localities have been stripped of seal life; but this was done by the wholesale slaughter of young and old, males and females. On the Pribiloff Islands, the animal has been carefully preserved. Cynics, pondering over the problem, and observing that at the late auction of furs in London, sealskins commanded twice the price of 1889, have wondered whether the Smithsonian Professor is not being unconsciously used by the new lessees of the islands, to help the boom in sealskins which would mean millions to the North American Company.

IN QUEST OF THE HOLY GRAIL.

During the spring of 1866 I was in the famed city of Manila; not as a guest of the Captain-General; not even living in one of the luxurious hotels, but as a castaway, hard up, staying in an obscure lodging, kept by a cock fighting, garlic eating *mestizo*. Of all the ports in the east I believe Manila is the worst for a sailor in distress. I had indeed a hard time of it, and would have embraced any chance to get away from the place. I had applied to the Consuls for aid, but in vain, as the last vessel I had been on board was a Spanish coasting brig, and this absolved them from taking any interest in my fate, and left me to the tender mercies of the Spanish authorities, and I had little to expect from them, being a heretic and a "gringo." Shortly after my arrival at Manila I had rendered a slight service to an official in the office of the captain of the port—what position he really occupied I did not know—and he used occasionally to visit me and bring me cigars or fruit and stay for half an hour's chat with me. He was a tall, dark, bilious-looking individual, with a broad brimmed sombrero tilted over his glistening eyes, which twinkled like stars in a dark night, and were never at rest. These eyes always produced a strange effect on me, and I feared him, though I felt attracted towards him. He was very religious, and, as I afterwards discovered, a perfect tool in the hands of the priests.

I had been in Manila about two months, when one evening on returning home, I was told that Don Ignazio had been there, and left a message saying that he wished me to stop at home until he returned as he wanted to see me. At 8 o'clock he made his appearance, and after the usual salutation, offering me a cigar, he begged me to accompany him for a walk. The Don took me inside the city to a wine-shop, whose dark interior contrasted strongly with the bright moonlight without. He was evidently known, and probably expected, as we were shown into a private room without a word, and a bottle of port wine and glasses were brought in. The Don filled the glasses, and holding one up to the light invited me to take the other, saying, suddenly "Friend, do you wish to get away from Manila?" "Yes," I answered, "I do." "Do you wish to make money?" he inquired. "Yes," I stammered out, "short of robbery, I would do anything to attain that, and even risk my life!" "It is not robbery," he said, but you may have to defend your life, though probably there will be no danger whatever; and the blessings of the holy church will be over your undertaking if you engage in it." I reached for the bottle to fill another glass, but he pushed it away with an impatient movement of his hand. "No more drink," he said, "but listen to me," and he forthwith began to explain what he wished me to do.

During the earthquakes and typhoons in Manila in 1862, when the city was almost destroyed, one of the churches, with hoards of gold, silver, and precious stones, the accumulations of centuries,—was levelled to the ground; and when, after weeks of labour, the ruins had been thoroughly searched, no sign of these treasures could be found; they had completely disappeared as if they had never existed. Much money had been spent in investigation, but no clue could be discovered of their whereabouts until quite recently, when secret information had been received that the treasures were in the hands of a few unscrupulous persons, but beyond the reach of the authorities in Manila. The high ecclesiastical court had concluded to employ craft and cunning against the sacrilegious bandits for the recovery of this immense treasure. A schooner was purchas-

ed, which they intended to fit out as a trader, with a picked crew, and after lading between the islands to allay suspicion, gradually approach the place where the treasure was concealed and surprise the robbers in their retreat. They had already engaged the commander, but now wanted a mate, and were ready to engage me, through the recommendation of Don Ignazio. I had to promise to be secret as the grave; as all the curses of the church would be heaped on my head if I divulged anything, but a great pecuniary reward was held out if we succeeded. I understood him to say that the disappearance of the treasure was still a secret to the people generally, although several years had passed, and they intended to keep it so even if it were recovered.

It did not take me long to make up my mind. I was ready to risk a great deal to change my present circumstances. I told the Don that he could depend on me, which brought a grim smile of satisfaction on his lips, and it deepened when I expressed a wish to be introduced to my future commander as soon as possible. He straightened himself up as he answered: "I will be your future commander!" I had not imagined anything of that sort, and it took me with surprise. But why not? Religious fanatic as he undoubtedly was, I believed he was not a bad fellow at the bottom, and I had no doubt but that he would fight well, in an emergency, for the Church whose devoted servant he appeared to be. Still I thought it would be rather imprudent for him to show himself in the scheme, as he was probably well known in Manila, and the robbers were sure to have spies there. When I expressed my doubts to him, he told me that nobody knew of his connection with the church. They only knew him as an old sailor, at present in the Government service from which he would in a day or two be publicly dismissed in disgrace. As I had no farther objection to make, I agreed to join him and to be ready at any moment. He thought the schooner would be here inside a week, when he would take command, and I could then join her, but in the meantime I had to remain where I was. We drank success to our expedition, and I felt highly elated as we walked to my lodging, through the now almost deserted and silent streets. The Don parted from me at the door, enjoining the strictest secrecy. I did not see the Don for the five following days, and began to chafe over the delay, when one morning I heard his voice, inquiring for me. I hurried down to meet him, and found him standing at the door conversing with the landlord. "Here is luck, amigo; Don Ignazio has got a ship for you!" exclaimed the *mestizo*, as he already in imagination was fingering my advance. "True!" said the Don, as I looked to him for confirmation, "if you will go in a small schooner as mate with me; but your pay will only be thirty dollars per month. Will you go?" As I was apparently doubtfully considering the offer, my landlord, afraid that I would decline, and that the coveted dollars would slip out of his grasp, hastened to assure the Don that I would be only too glad to go, and as I did not contradict him, the Don produced a document which I signed; thirty pesos were counted out to me on the spot, to the *mestizo's* great delight, and I was told to be on board the schooner the next day. Most of the thirty dollars went into my landlord's pocket, and with the balance I bought a few articles necessary for my intended voyage.

The following morning at 10 o'clock I went on board the schooner, which was in charge of an old Manila man who eyed me somewhat suspiciously when I informed him that I was going in the vessel. She was a real country wallah, and in dreadful disorder; both standing and running gear knotted and spliced, sails with patches upon patches; and the paint, what was left of it, peeling off. She was evidently of a green old age and had been badly used for years. The Don grinned at my look of dismay when he arrived on board, and to my question did he not intend to put her in better order before we left, answered with a curt "no." He then informed me that we must be ready to sail before the month was up; that he had engaged four trustworthy men and a cook, but that he still wanted a second mate. I had formed a slight acquaintance with a young American of the name of Baker, who had been left behind in hospital from some ship, but was now well. I thought I might be able to induce him to go if the looks of the vessel did not scare him; and the next day, after a great deal of persuasion, I got him to consent, to my great relief, as I did not like the idea of being alone on board with such a villainous looking crew as the sailors proved to be when they were mustered. But the Don had confidence in them. One in particular, a short, thick-set, scowling ruffian, with the name of Joaquin, inspired me with great aversion, and I had already a presentiment that he would in some

way play us false. The cook was the only one I placed any reliance on. He had been for years cook on American ships, and could speak English. For a couple of days we were busy taking in cargo and stores, and putting the schooner ship shape; but the Don seemed averse to any improvement being made in her appearance, and very little was done in this direction. He made Baker and I presents of two good revolvers; half a dozen muskets were also brought on board, though we discovered later that no ammunition came with them, so that they were comparatively useless. Before we sailed the Don gave me a paper insuring monthly pay of 100 dollars whether we succeeded or not, and a bonus of 15,000 dollars if the voyage was successful. I had given Baker a hint when he joined that we were on something different to a regular trading voyage, and that perhaps there was plenty of money in it, and he was satisfied.

On the 1st of May we took our departure from Manila for a place called Engano, about 250 miles distant, ostensibly to take on board some bales of bagging, but really to hunt up more information concerning the treasure. Here occurred my first trouble with the sailors, and it almost proved to be my last. We had a small dinghy, hanging in davits astern, which we used as a pulling boat in harbour; and when we had anchored Don Ignazio expressed a wish to go on shore. Seeing Joaquin standing near, I ordered him to lower the dinghy and pull the captain on shore, but instead of obeying, he coolly took a cigarette from behind his ear and walked up to the galley fire to light it. Such an impudent disregard of my order I could not pass by, so I knock the cigarette out of his mouth. This made him furious, and with a fearful malediction he pulled a long, sharp pointed knife from his waist and made a lunge at me with it, but the cook grasped his arm, and prevented his doing any mischief. After this I always carried my revolver. When I told the Don about this matter, he only shrugged his shoulders, and told me to be cautious. His stay on shore was short and evidently unsatisfactory, as he quickly returned, with a cloud on his brow, and ordered me to get under weigh for Bajadanto, a place 63 miles nearer Manila, where we would hear some news and probably receive a passenger. We arrived there in due time, and found it to be a small fishing-village, peopled by half amphibious, and almost naked, natives, who swarmed round the schooner from morning till night in their canoes begging. Don Ignazio spent two whole days on shore here, and when he returned on the third day I saw success written in the satisfied smile on his sallow countenance. The wind was fresh and fair as we proceeded with all sail set within an hour after the Don had come on board. Cape Bajadanto was just rounded, when I was told to steer towards the shore and anchor as near it as I could with safety. I consequently kept the vessel in, and the lead going, and anchored in 5 fathoms of water, less than 200 yards from the wooded shore, where not a human being or a habitation was in sight. It was now getting dark, and the Don ordered me to hang a bright light in the rigging, and also to let the sailors go below, but that we had better keep watch, and he would take the first one himself. Later, when we were alone on deck he told what had happened. After the treasure had been secured by the robbers, during the panic following the earthquake, they first conveyed it to Engano, from there to Bajadanto, and then to the island of Tamatan where it was buried, and where it still was six months ago; one of the robbers, a native of Bajadanto, had quarrelled with the rest, and had to flee from them. This was the man who had given the information, hoping to secure a reward and a free pardon. Don Ignazio had seen this man yesterday and persuaded him to go with us and point out the rest if we should come across them, but they had probably left Tamatan for some other island as they had a small sloop, and were only four in number. They had not yet disposed of the loot because they had no opportunity to do so. This Bajadanto man was to come across the island to-night and hail the schooner, and we should lower the boat and take him on board secretly as he knew that he had been well watched since his desertion from the gang. Our conversation was interrupted at 11 o'clock by the hail from shore. The Don and one sailor pulled in for the expected passenger, while the rest got the schooner under weigh. The boat returned and was hoisted up as the sails began to draw and our course was set for the open sea. I had now a good look at the new arrival, and a more unprepossessing visage I had seldom seen. We had had fine weather since leaving Manila, but it now began to look dirty, and the barometer fell rapidly. I advised the Don to go between the islands and anchor until the bad weather passed, but his impatience to proceed was so great that he would not consent to any delay. When we got clear of the shelter of the land we felt the whole force of

the wind, which had increased to a heavy gale, and created a tremendous sea, which was every minute rising higher. Both wind and sea were in our favour, so we scudded before it under only a handful of canvass, and made tolerably fair running. Extremely careful steering was necessary as the slightest yawing would probably result in the schooner broaching to, the consequence of which in such a gale would have been disastrous. Baker and I took watch and watch, the Don being laid up in his berth sea-sick. Baker had been on deck during the forenoon, and when I relieved him at noon I stood aft for a while watching the steering. Had it been safe I would have hove her to, but the gale was now at its highest, and I dreaded attempting to bring her up in the wind. The waves were not long, but of an enormous height, their topmost sides foaming and curling as they raced one after the other. Joaquin was at the tiller, and was apparently doing his best, carefully watching each succeeding wave. As both air and water were warm I was but lightly clothed when I came on deck, and had neither hat nor boots. Observing that the fore-sheet was washing about in the lee scuppers, I stepped forward to coil it up out of the reach of the water. I had already succeeded in partly doing this, when I suddenly felt the wind, which had been blowing on my back, coming from the side. I looked aft, and saw Joaquin, with a demoniac grin on his face, jamming the tiller hard down and shooting the schooner up in the wind. At the same moment a green, frothing wave, towering high over my head, came tumbling over the low bulwarks, and swept me off my feet, sending me, unresistingly, into the fathomless deep to leeward. I had kept hold of the fore-sheet as I went overboard, but by such a terrible force was I carried along, that the rope slid rapidly through my fingers, chafing them to the bones, until the end came with a jerk. I remember cursing Joaquin as I went over, and speculating whether the end had come; then I found myself laughing, at the thought of how disappointed the Don would be when he found I had gone. Shortly everything changed to a beautiful red, and shifted like a kaleidoscope from purple to pink in a hundred different tints, and all this time I was going down, down, down, when all of a sudden I felt a terrible shock and all turned black.

I have read about unfortunate wretches being rolled down steep hills, headed up naked in barrels studded with sharp spikes; and I used to imagine the agonies they must have endured. Such were the feelings I experienced when I began to awake again to consciousness! Millions of pins and needles sticking into my flesh from head to foot; sharp pincers pinching me, the blood surging through my veins, one moment like lightning and liquid fire, then stopping suddenly, but only to make another violent surge. Slowly, how awfully slowly! my perceptions returned, and my sufferings became less. Before I opened my eyes I heard a buzzing sound, which gradually became clearer, until finally I could distinguish Baker's voice. When I opened my eyes I found I was lying on the cabin table, with Baker stooping over me and rubbing me with all his strength. When he saw me looking at him he ceased, and exclaimed fervently: "Thank God! that you have come to; I thought you were gone, old man!" The Don, pale as a ghost, was sitting close to me, holding one of my hands. I was still too weak to speak, but was recovering fast. In an hour I was able to crawl on deck, when I found the schooner hove to, and the wind rapidly going down. Watching my opportunity, I put her on her course again, and gradually increased the sails. At 10 p.m. she was running before a fresh, fair wind, with all sail set. Baker then told me how I was saved. He said, he felt the schooner broaching to and rushed on deck, but too late. He saw me go over and his first impulse was to knock Joaquin down; and the schooner coming up to the wind, he kept her so. Everything loose on deck was washed over, though the sea did not reach him; the lead line was coiled up in a tub standing close to the main mast, to which the lower end of the line was fastened. This was washed over, and got entangled about my legs, and when the vessel's headway was stopped I was pulled in without difficulty, not having been more than five minutes in the water. I took no present notice of Joaquin's attempt on my life at Don Ignazio's earnest request, but I determined to be level with him on some future occasion if the opportunity offered. After this we had uninterrupted fine weather, but it was nearly a month before we sighted the group of islands of which Tamatan was one. The informer was our pilot among these islands and reefs, and a very good one he proved to be; his heart evidently being in the work. It was late one afternoon when we anchored between the two islands of Tamatan and Tanadik; we had been keeping a sharp

lookout for the sloop, but had seen nothing of her. A couple of canoes paddled out to us, so I hoisted the English ensign, thinking that the Spanish might perhaps scare them. There were only four natives, and unknown to Alonzo, the informer, who had been living for years on this group. They had nothing to trade, and could give us no information, except that no strangers were now living there. Alonzo was still convinced that the robbers were somewhere in the neighbourhood, and next morning an expedition to their former quarters on shore was decided on. At daylight next morning Don Ignazio, with Alonzo and three of the sailors started, well armed. I had persuaded the Don to leave Joaquin on board, and I kept him busy below in the hold the whole day. In the evening they returned dejected and weary; they had been to the huts formerly occupied by the robbers; they had seen the recess where the treasure had been planted, but the place was deserted and in ruins. And now we had to begin the search afresh, and revert to the original plan of trading between the islands until the villains were discovered. Don Ignazio was furious, and heaped reproaches and abuse on Alonzo who, I could see, whatever contempt he deserved, had acted squarely towards us. I attempted to pacify him, and partly succeeded by telling him that, as the robbers could not have had any news of our quest, we would surely surprise them yet, and recover the treasure. The following day we filled up our empty water-casks, and in the evening got under weigh for the Hogoleu group.

For the next three weeks we cruised among the islands, from group to group, some of which were inhabited, and others not. The natives were generally mild and inoffensive, and brought off fruit and shells and occasionally calabashes of coconut oil for trading. We treated them well and always parted from them on the best of terms. But we could obtain no news about the sloop. No such vessel had ever been seen among the islands, and I began to fear that before long there would be trouble with Don Ignazio, as he began to have frequent fits of passion, one moment paying to the saints and the next cursing like a trooper. I had still confidence in Alonzo, in fact I had to acknowledge to myself that I had misjudged him when he came on board, and I found that he was the most trustworthy of the lot. On the 13th of July we anchored off the island of Pighi. It was not very large, but one of the most beautiful of those lovely isles. It was inhabited, as we perceived by several huts nestling in a grove of trees, lining the margin of a small bay opposite our anchorage. We had the English ensign hoisted as usual, and in a short time a large canoe was seen paddling off from shore towards the schooner. Six brawny natives were in her, and when they came alongside one of them took a folded paper from out his hair and presented it without coming on board. It was passed up to me, but I found it to be only a leaf torn out of a book—a Spanish prayer book as I correctly surmised. No writing whatever was on it. I turned it over and over, and minutely examined it but could make nothing of it. I asked Don Ignazio and Alonzo to come on deck—they invariably stayed below when any canoes made their first appearance—and gave them the paper, but they could make nothing of it. By signs, the natives pointed invitingly to the beach. A basket full of hard bread and some sugar was passed to them, of which they partook with great relish. The Don had got the idea, which nobody tried to combat, that our men were here, and that now all our cunning was required to circumvent them. Finally, I volunteered to take the dinghy and pull myself ashore, and find out who had sent the paper, as it was certainly sent for some purpose by somebody. The natives did not appear to be hostile; but as the robbers might be there, I reloaded my revolver and stuck a dagger in my sash. When I was a short distance from the beach I paused for a moment and looked about me, but seeing only about a dozen natives, I gave a spurt and shot the boat well up on the sand. I immediately leaped out and confronted the crowd, but I met nothing but smiling, curious faces. Several of the people beckoned me to follow them. I did so, and arrived at the hut they were bringing me to, where I heard a cheery voice with a broad Scotch accent say, "Good morning, mon, come in and sit doon!" The natives left me at the door, and taking away part of the front which consisted of mats, let the daylight in upon the contents of the room, an ordinary native hut with a platform erected a foot above the floor in one end. On this platform, reposed the form of a man, black as ebony and of immense bulk. I gazed upon him with amazement. Nobody else was in the room, so it was surely he who had spoken. "Sit doon, sit doon," said he, making a place for me beside him on the platform, "I am short of chairs, so you will have to sit on the bed,

boss! yah, yah, yah!" letting off a boisterous shout of laughter. After I had told him that I was master of a schooner trading between the islands, he related to me volubly how he was and what he was doing there. He belonged to Greenock, in Scotland; had run away many years ago from an American whaler whilst at one of the islands, had been there ever since living a free and lazy life and intended to stop there. I asked him if any vessels ever came there. Very seldom, he said; a sloop had been there a few days ago, but left again for some islands a little farther to the south-east; they were only Spaniards, three in number, he said, and were not very communicative. "Do you want anything from the schooner? I am going right on board to get under weigh!" "Some tobacco," he replied. "All right," said I, "send a canoe off at once; good bye, I may perhaps see you again!" and off I darted to the beach while he leisurely waddled after me. When I got down to the boat I recollected the torn out leaf. "You sent off a leaf out of a book; what was the meaning of that?" I asked. "That was my letter," said he "I wished to see somebody and as I never go afloat myself." "All right, all right," said I, interrupting him again as I pushed off the boat and jumped into it. I was soon on board and told the Don what I had heard, which created such excitement in him that he began to embrace me and I could with difficulty keep clear of him. The canoe was waiting and I literally loaded it down with tobacco, food, clothing, and several bottles of aguardienta. Alonzo was confident that the robbers had returned to Tamatan, whither we concluded to follow them even if we could not get ahead of them. The second night out from Pigeli we had to anchor under a low island, as the night was dark and dangerous reefs were all around us. No lights were allowed to be shown on board and absolute silence was enjoined. The Don had sailors to stand single watch during the night, against my judgment, as we were continually on the watch during the day, he said. I awoke at 11 o'clock with an undefinable feeling of uneasiness, and getting up quietly, looked about. Everything was still, but forward on the schooner's deck somebody was waving a bright light from side to side. I dropped down into the cabin thunderstruck; my first thought was of Alonzo, but he was fast asleep in his berth. Gently shaking the Don I awakened him, and whispering to him to be quiet, pulled him up the companion. When he saw the light he clearly comprehended the treacherous signals. His rage was fearful. Grasping the ever handy dagger with his right hand, he pushed me on one side, and glided forward like a snake. A fearful cry rang on the still air, bringing every one on deck. Then followed a splash, and Don Ignacio came slowly at wiping his dagger. "You are avenged, amigo," said he to me, "when I strike, I strike home! so perish all traitors! go below, you men, and beware!" This to the three sailors who had tumbled up on deck. I felt appalled! Such swift punishment, although well deserved, inspired me with dread, and I shuddered when the Don approached me. Joaquin had met his doom, and I had nothing more to fear from him, but I would have preferred to have seen him alive. "Sharp work, that!" said Baker, as we sat talking on deck for the remainder of the night, "we have to keep on the Don's soft side or we may perhaps have to share that fellow's fate." "No danger," said I with confidence I did not really feel; "anyhow, we will stick together and do what is right!" "Whatever is, is right!" quoth Baker, with a grimace. Next day we fortunately got a fresh breeze, and at 2 o'clock p.m. let go in our former anchorage. No sloop was there. We had scarcely got the sails furled, however, before we saw her creeping round the opposite point of the island with all sail set. When they saw us they sheered off at first, but finally stood towards us and anchored about a hundred yards from us. We had the English flag flying and they had apparently no suspicion of our errand. Now, when the fatal moment had at last arrived, I watched the faces of my companion with some concern. The Don was unusually calm, but his eyes glittered most unnaturally. Alonzo was nervous, the muscles in his face twitching continuously, but he looked stern and determined. Baker smiled while he caressed his revolver; and the sailors looked as if they were fully prepared for the struggle; the cook was sharpening his chopper and singing. No traitors among them, I felt sure. I advised the Don to wait for the visit they would certainly pay us, and then we would have them perhaps without bloodshed; and he gave me the entire management of the affair. Don Ignacio, Alonzo, and the three sailors were to remain in the cabin, which we kept in semi-darkness by the skylight being covered. They were well armed, and ready to receive the visitors who would, if possible, be got

down one by one, the first one to be taken without any struggle or noise. Baker stood in the companion; the cook was in the galley, and I was walking the deck. I observed that they watched us intently ever since they anchored, while I pretended not to take any particular notice of them. It struck me then that they were planning to capture the schooner, and thought that we were unprepared. After some consultation they lowered their boat, and all three of them got into her—where was the fourth man? I had put on a white linen coat, in the left hand pocket of which I kept my cocked revolver with a finger on the trigger, nonchalantly smoking a cigar. When the boat came alongside I sung out to the cook in English to make fast the painter. They came over the side one by one, each one shaking me by the hand, and looking curiously about him. One of them, evidently the leader, was a tall, fine looking man, speaking tolerably good English, but the other two were of the usual type of ruffian, low-browed and scowling. We had a talk about the islands for a few minutes, when I told them that the captain was down in the cabin, rather unwell, would they not go down see him? They all walked aft together, one of the shorter men being ahead, when I drew the tall man's attention to something, and enabled Baker to invite the foremost man down in the cabin. He went all right. No sound was heard from below as the tall man passed Baker with a greeting on his way down. When his head had disappeared under the companion hatch I seized the remaining man by the throat and putting my leg behind his, tripped him neatly over on his back, and held my revolver to his breast while the cook hastened to bind him hand and foot, and then gag him. I took him so completely by surprise that he had no chance to draw any weapon, or make any noise. A terrible commotion was now heard from below, and as I beheld the tall man's head for a moment appear in sight, I saw Baker strike him a blow on the head with his revolver, driving him back. I rushed up to assist him, but my help was not needed. When I looked down I saw Don Ignacio and the three sailors bending over the tall leader, and hacking him with their knives. The sight was sickening! I pulled the covering off the sky light, and opened it, and then the Don and the three other butchers came rushing up, brandishing their knives. Baker was eyeing them contemptuously with folded arms but with the revolver in one hand. "They are hyenas!" said he to me, "and having now tasted blood, look out!" The sailors pulled the dead bodies of Alonzo and the tall bandit up on deck, and then the living one wrapped up in a thick blanket and almost smothered. Then the Don and two of the sailors took the sloop's boat, and pulled over to her. Baker told me now, that when the first man got down in the cabin a blanket was thrown over his head, and his cries wholly smothered; when the tall man came down he immediately recognized Alonzo, and pulling out his ever ready knife, like a flash of lightning sent it with unerring aim through Alonzo's heart; and when trying to get back to the deck Baker struck him on the head and stunned him, when the vultures threw themselves on his body and finished him. In a short time the Don returned with a long face and nothing. They had overhauled the sloop from stem to stern, every nook and cranny, but found nothing on board to indicate the place where the treasure was concealed. The dead bandit was first stripped, but nothing was found on him except a few gold pieces and some silver. The two living ones were now unceremoniously deprived of their clothing, but they had nothing. The Don began to interrogate them, but they remained sulky and dumb. The small amount of patience he was endowed with now failed him, and he swore he would soon make them speak. A hangman's knot was made in the ends of the fore and main throat-halliards and placed round their necks; they were now asked again if they would tell where the treasure was, but they still remained dumb. The Don was foaming at the mouth. He gave the order to hoist away, when I interfered and stopped it. He looked at me as if he wanted to kill me too; but I did not quail as I saw that Baker had him covered with his revolver. "If you kill these men," said I, "how will you ever get possession of the treasure? I came here to find it; and I will find it; we have done killing enough now, and no more is needed. Offer these men their lives and their liberty, and they will divulge the hiding place." It was wonderful to see how he calmed down when I spoke; he knew that I was right, but his terrible temper overpowered him sometimes. He made the sailors take the ropes off the men's necks, and went up and talked to them. Gradually their dark faces cleared and they began to answer him. I saw that he had gained the day, and I was truly thankful to see it. Looking over to me with a

different expression on his countenance than had lately been on it, said he, "You are my friend, I can thank you for all. I know now where the treasure is, but it is too late to-day to go there. We will now bury the dead, and thank the good God!" The two dead bodies were sewed up in sacks, and brought on shore and buried. Baker and I kept watch and watch over the two prisoners during the night; and next morning at daylight the Don and the three sailors started away from the schooner in the long-boat, taking one of the prisoners with them. The prisoner remaining on board told us that it was buried not far from where they had hid it before; the fourth robber had been killed in trying to escape from them to sell them. At 10 o'clock in the forenoon we saw the shore party coming down to the beach. Every one of the men was heavily laden; and their burdens being put in the boat it was soon alongside. How carefully everything was passed up or deck and taken aft. The Don now with his own hands cut the prisoners' lashings, and told them to get in the sloop's boat and go on board and get under weigh at once. In an hour's time the sloop was beyond the point, out of view, and we saw her no more. The sailors were set to filling the watercasks, while we passed the treasures down into the cabin and opened them out. What a collection of precious things! Crowns, stars, and crosses of gold and diamonds; strangely wrought vessels of gold, studded with pearls; a whole dress made of pearls sewn together. But the most precious of all was a casket of gold, incrustured with diamonds; this the Don would not let us touch or allow it to be opened; he treated it with great reverence, crossing himself every time he touched it. He said it contained some part of the Saviour's body, which I called the "Holy Grail." Both I and Baker were transfixed with wonder, gazing at what he later [disrespectfully] called the "loot." He looked at me and I looked at him, each reading the other's thoughts. "Honest Injun!" said I; "honest Injun," replied Baker, with a sigh, and that was the last of any dishonourable thoughts we may have entertained. The treasures were carefully put into one of the berths; but the "Holy Grail" got a place of its own on a sort of altar, where the sailors were allowed to have a sight of it and offer up their prayers. We got under weigh that night for Guam, where Don Ignacio expected to find a larger vessel on which he could tranship the treasure. We were now very careful in our sailing, but arrived there after a pleasant passage on the 8th of August, and to the Don's great joy found the Spanish gun-vessel *Admirante Moreno* lying at anchor. The treasure was taken on board with great secrecy; and as our voyage was now virtually at an end, both I and Baker followed the Don on board, and went in her to Manila as passengers. The schooner was put under the charge of one of the sailors to follow us at leisure. We were treated like princes on the passage, and also after our arrival at Manila. I had the honour of a special introduction to a certain high and holy man, who gave me his blessing when I left. The Don fulfilled his promise like a gentleman; gave me a cheque for 15,000 dollars, and 500 dollars in gold; Baker received a cheque for 10,000 dollars and 250 in gold. After bidding Don Ignacio farewell, we took the first steamer for Hongkong, where we separated. Baker made good use of his money, because I saw him only a few years ago, master of a large ship, his own. I am sorry to say that I made ducks and drakes of mine, and I am now but very little better off for my quest of the "Holy Grail."

IN THE U.S. CONSULAR-GENERAL COURT FOR JAPAN.

Before G. H. SCIDMORE, Esq., Vice-Consul General.—TUESDAY, December 23rd, 1890.

KATO SOGORO V. E. KILDOYLE.

This case came up for the assessment of costs, judgment having been given on the 15th instant as follows:—

This case having been tried before C. R. Great-house, United States Consul-General, and J. Mendelson and G. E. Rice, associates, and said Consul-General and said associates having made and rendered their opinion in writing, find and adjudge that the defendant is indebted to the plaintiff in the sum of one hundred and twelve dollars with interest thereon from the third day of December, 1889, at the rate of seven per cent. per annum, and adjudge that the defendant pay to the plaintiff one hundred and twelve dollars with interest thereon from the third day of December, 1889, at

the rate of seven per cent. per annum with costs, for which execution and process may issue.

C. R. GREATHOUSE,
U.S. Consul-General.

We concur,

J. MENDELSON } Associates.
G. E. RICE }

The Vice-Consul General said, in reference to costs, that since the judgment had been rendered the plaintiff had filed a statement of costs he desired to have against the defendant. Having read the Court rules as to costs, his Honour said, the plaintiff when he began the case deposited \$20 as security for costs. On the 4th of November the defendant deposited \$1.80. The costs would be for the attendance of the associates. They were entitled to receive each \$3.20 for each attendance. They attended for three days which would amount to \$21.60 gold up to December 3rd, 1889, when judgment was reserved. The costs accruing to the clerk of the court were \$12.95 gold; for the marshal up to the same date the fees were \$4.50; but up to December 3rd, 1889, the costs of the clerk and the marshal would only be \$20, they having divided the amount deposited by the plaintiff and waived the difference. On February 10th there was a subsequent hearing, and one witness was heard for the plaintiff. The costs accruing since December 3rd, 1889, were clerk's fees \$2.26 gold—\$2.98 Mexican. The witnesses would receive \$1.50 per day and 15 *sen* for travelling expenses. The witness's fees would be \$6.54. The plaintiff was entitled to the return of the \$20 and also for all other expenses that he actually incurred for obtaining witness and other expenses.

Plaintiff's counsel said Mr. Whitfield had been called by him and the vice Consul-General, after reading over the record decided that that was the case. Therefore there would be \$2.18 more for fees to be added, which would make the expenses for witnesses \$8.54. The total would be \$60.24. The defendant made a deposit on November 12th of \$4.80 which he admitted to be owing to the plaintiff. That would be returned.

PASSENGERS.

TO ARRIVE.

Per German steamer *General Werder*, from Hongkong:—Mr. Kragh and family, Mr. McNeill, Mr. Schramm, and Professor T. Saka in cabin.

Per French steamer *Sydney* from Marseilles:—Mr. and Mrs. Lescasse and 3 infants, Messrs. E. Coult, Dangerfield, Rev. Messrs. Balet, J. Bertrand, and Mr. Kikawa; from Calcutta, Rev. Mr. Le Gris; from Saigon, Rev. Mr. Halin, Messrs. Rouger and Noitin.

ARRIVED.

Per Japanese steamer *Saikio Maru*, from Shanghai and ports:—Messrs. Wakamiya, Egoshi, W. H. Stone, Morishita, J. Zading, E. M. Orloff, F. Upton, G. H. R. Wainwright, W. T. Payne, and Kumasaki in cabin; Mr. G. W. Forbes and 1 Japanese in second class, and 31 passengers in steerage.

Per British steamer *Aucona*, from Hongkong, via Ports:—Mr. H. G. Parlett, Mr. C. J. Strome, and Mr. and Mrs. C. H. Fearon in cabin; 13 passengers in steerage.

Per American steamer *City of Rio de Janeiro*, from San Francisco via Honolulu:—Hon. Paul Neumann and servant, Miss Neumann, Mr. and Mrs. G. O. Nagayama, and Mr. A. Littlejohn in cabin. For Shanghai: Rev. E. H. Thomson and Rev. G. W. Verity in cabin. For Hongkong: Mrs. A. M. Cheek, 2 children, and servant in cabin.

Per British steamer *Oceanic*, from Hongkong:—Mr. and Mrs. Austin, Messrs. Wm. Graham, J. G. Skipton, F. D. Osborne, and Chang Mow Kung in cabin.

Per British steamer *Gaelic*, from San Francisco:—Mr. Louis Eppinger, Mrs. E. L. Mozley, Mr. W. H. Magee, Mr. H. S. Gray, Miss Yoss, Dr. Alfred Guthrie, Mr. Otto Krogmann, Mr. T. Lacey, Miss J. E. Locke, Miss G. H. Hishikawa.

M.D., Miss May Russell, and Mr. P. M. Saltaral in cabin. For Hongkong: Mr. Wm. D. Siuk, Mr. Yung Wing Thung, Miss Lyon, Miss C. J. Jewell, and Rev. J. Elias Hughes in cabin. For Shanghai: Mr. Elliott Stone, Miss R. M. Sides, and Miss Hu King Eng in cabin. For Nagasaki: Misses Jennie Gheer, Elisa Forsell, Nora Seeds, Elizabeth Russell, and Grace Tucker in cabin. For Bangkok: Hon. and Mrs. S. H. Boyd and Mrs. Kate G. Booth in cabin.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Miss M. E. Williams, Miss E. McAllister, Miss J. S. Graham, Miss Ada Hevour, Mr. R. Masujima, and Mr. H. D. Leland in cabin; Messrs. J. Cook, Muire, and Hada in second class, and 21 passengers in steerage.

DEPARTED.

Per French steamer *Yangtse*, for Shanghai, via Kobe:—Miss A. Butler, Mr. and Mrs. Lam Shu Nam, Mr. Perard and one servant, Colonel Maudint, Miss Kishida Yasu, Miss Kishida Ito, Mrs. Padin and infant, Messrs. A. H. Groom, A. Butler, N. Faga, A. Baldassi, Kraemer, Kamae, Nautier, G. de Maulne, and Matsunaka in cabin.

Per American steamer *City of Rio de Janeiro*, for Hongkong:—Captain J. B. MacMillan, Mr. R. L. Morant, Mrs. O. Margary, Mr. Wong Get Hing, Mr. W. G. Conley, Mr. and Mrs. Baldwin and brother in cabin.

Per Japanese steamer *Saikio Maru*, for Shanghai and ports:—Mrs. Nakamikado, Mrs. Campbell, Mrs. J. Strothoff, Messrs. E. M. Oloff, C. Deubelgh, Okazaki, J. L. Jensen, A. M. Montell, and Fukumoto in cabin; Mrs. Kawashima, Messrs. Matsunaka and Mizutani in second class; 8 passengers in steerage.

CARGOES.

Per French steamer *Yangtse*, for Shanghai, via Kobe:—Raw Silk for France 175 Bales; Waste Silk for France 281 Bales; Treasure \$75,000.00.

REPORTS.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 13th December at 11 a.m.; strong gale from N.W. the entire passage. Arrived at Nagasaki the 15th at 5 a.m. and left the 15th at 5 p.m.; fresh northerly winds. Arrived at Shimomoseki the 16th at 7 a.m. and left the 16th at 9.15 a.m.; fresh N. winds and fine. Arrived at Kobe the 17th at 6.03 a.m. and left the 18th at noon; fresh W.N.W. winds throughout. Arrived at Yokohama the 19th December at 3.50 p.m.

The British steamer *Oceanic*, Captain W. M. Smith, reports:—Left Hongkong the Friday, December 19th, at 4 p.m., had variable winds, smooth sea, and fine clear weather to Ooshima, which was passed on the 23rd at 9.30 p.m. Thence S.W. wind, increasing to a moderate gale with heavy rain, lightning, thunder, and heavy sea, which continued to port. Passed Rock Island on the 24th at 8.43 a.m. Arrived at Yokohama on the 24th December at 1.17 p.m. Time 4 days 19 hours and 30 minutes.

The British steamer *Gaelic*, Captain Pearne, reports:—Left San Francisco the 6th December at 4.02 p.m.; to the 8th had light westerly winds and smooth sea; thence to the 19th strong northerly gale and high sea; thence to the 18th light north-easterly and fine weather; thence to the 21st fresh westerly with heavy north-west swell; thence to port strong to moderate northerly winds and fine weather. Arrived at Yokohama the 24th December at 9 p.m. Time 17 days, 11 hours, 30 minutes.

LATEST COMMERCIAL.

IMPORTS.

The position of the Import market remains unchanged. There is no demand for Yarns, and in Piece-goods a sale of 9 lbs. Shirtings is now and again reported at about former quotations. Sales for the week are 50 bales English Yarns and about 3,500 pieces Shirtings.

Sheet Iron	3.20 to 3.40
Galvanized iron sheets	5.80 to 6.00
Wire Nails, assorted	4.40 to 4.90
Tin Plates, per box	5.00 to 5.25
Pig Iron, No. 3	1.25 to 1.27 1/2

KEROSENE.

Market dull but nominally unchanged. Buyers, however, do not seem eager to pay the prices which holders ask. No fresh arrivals during the week either from Europe or America.

QUOTATIONS.

Chester	\$1.70 to 1.73 1/2
Comel	1.67 1/2 to 1.70
Devco	1.65 to 1.67 1/2
Russian	1.60 to 1.65

SUGAR.

The market is dull and no prospect of improvement. Browns especially have declined. Stocks large, about 100,000 piculs White and Brown together.

Brown Takao	\$4.10 to 4.15
Brown Daitong	3.10 to 4.20
Brown Canton	4.80 to 5.00
Brown Java and Penang	5.00 to 5.60
White Refined	4.55 to 7.50

EXPORTS.

RAW SILK.

Our last issue was dated 10th inst., since when settlements in this Market are 700 piculs divided thus:—Hanks, 20; Filatures, 570; Re-reels, 112; Kakedas minus, 31; Oshu, 29. There have been no direct shipments during the week; the export business of which stands at the above named 700 piculs.

In the early part of the week continued high exchange prevented much business; but a few days ago the renewed fall in Silver caused a corresponding change here, and several of the orders mentioned in our last were filled.

There have been a few purchases made at figures below our quotations, some holders requiring money for the end of the year. One big man quitted 200 piculs in a line, and several other smaller parcels, especially in Filatures, have been bought to advantage. There is no further talk of a Syndicate at the moment, but the majority of holders appear to be able and willing to carry their stocks into New Year and see what that will do for them.

Arrivals are beginning to fall off and although there must be some reeled silk in the country ready to come down; the present wintry weather will close most of the Filatures and Reeling establishments for the next six weeks. With any business at all we look for a decline in stock list from now.

There has been only one shipping opportunity since we last wrote, viz., the French Mail Steamer of the 21st inst. This steamer, *Yangtsé*, carried 195 bales for Lyons and neighbourhood. Present export figures to date are 11,637 piculs, against

26,962 piculs last year and 25,892 at the 26th December, 1888.

Hanks.—In a long contest between buyers and sellers the latter have given way and some nice parcels both of *Shinshu* and *Shimonita* have been settled at prices ranging from \$490 to \$500, according to quality. The drop in Exchange has helped shippers very materially both in this and in all classes.

Filatures.—Some large lines done for the States, good No. 1 *Shinshu* bringing \$580 to \$570, according to chop. About 200 piculs of *Kaimeisha* were reported at \$582 1/2. The other large owners do not at the moment seem inclined to follow the *Kaimeisha* lead, and some of them stoutly declare their intention of holding on for at least another month. It is worthy of remark that on this day last year prices for these crack filatures were more than \$200 higher than they stand to-day. One parcel of *Koshu Kusanigisha* was recently booked at \$570. In fine sizes not so much has been done, but several parcels of good medium grade have been taken at \$560 or thereabouts.

Re-reels.—Well-known marks and best grades are held at prohibitive prices, while the trade has run chiefly on medium and common; outside provinces and districts having been dealt in at prices ranging from \$500 to \$520. The only sale in decent silk has been a parcel of *Annaka*, Fan chop, at \$540.

Kakedas.—These have been more strongly held than other sorts and there has been little business in them in consequence. There are plenty of enquiries in the Market, but as a rule buyers and sellers differ by \$10 or \$15. One parcel *White Flag* at \$550; *Red Lion*, \$537 1/2; No. 1 *Horse Head*, \$535; No. 2 *Horse Head*, \$525. These are entered in the list, but buyers refuse to go on without some reduction in price.

Oshu.—Business done has been in *Hamatsuki*: good medium at \$530, with lower quality at \$510.

WASTE SILK.

Trade in this branch has been on a smaller scale, settlements for the week amounting to 620 piculs; divided thus:—Cocoons, 87; *Noshi*, 280; *Kibiso*, 174; *Neri*, 79.

As will be seen from the above figures the week's business is not large, buyers complaining that quality is fast running down, especially in prime classes of *Noshi*. Prices for good quality are well maintained; at the same time sellers are current and do not seem to trouble their heads about the movements of exchange.

The French mail steamer, *Yangtsé*, of the 21st inst., carried 281 bales for Marseilles and beyond. This shipment brings the present export figure up to 16,210 piculs, against 14,599 piculs last year and 17,521 piculs in 1888.

Pierced Cocoons.—The remaining stock appears to hang fire; holders do not seem willing to sell at any reduction in price, and consumers tell us that they can supply themselves to better advantage in other countries.

Noshi.—Business is not large; buyers complain of the scarcity of desirable parcels, and it will be noted that the stock in this department is less than it was last year. Some good *Filatures* have been done at from \$144 to \$146; some good *Bushu* at \$130, with fair *Oshu* at the same price. *Foshu* has been more or less neglected, but some ordinary quality has been taken at \$75.

Kibiso.—Fair amount of daily trade in this, ranging from best *Filatures* at \$117 1/2 with seconds at \$109, down to common, dirty, rubbishy *Curries* at \$10.

Mawata.—No fresh purchases have been made, and the stock is small consisting chiefly of old fibre.

Neri.—Some little business has commenced in this article at about \$13 for rough uncleaned stock.

KEATING'S COUGH LOZENGES.

COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—Jins.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

**STEAM LAUNCHES & YACHTS.**

Fitted with KINGDON'S PATENT MACHINERY for which we are sole makers, are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).

181, QUEEN VICTORIA STREET, E.O.

MACHINERY.—Mr. ARTHUR WADHAM, PROPRIETOR of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams:—"Wadham, London." 1y. June 28, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Courten, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.

FOR THIRST AND NIGHT SWEATS USE HOLLOWAY'S ACID PHOSPHATE.

Dr. THOMAS L. WHISTLER, M.B., F.R.C.S., Prince of Wales Terrace, Bray, Ireland, says: "I have found it extremely grateful as a drink with water, and valuable in chronic dyspepsia and general debility. It is also valuable to allay thirst and sweats consequent on consumption."

**YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.**

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.
